Times of Troubles Andrew Sanders, 2012-05-02 This is the first academic study of the British Army in Northern Ireland. It investigates the complex experiences of English, Scottish, Welsh and Irish soldiers alike during the often-controversial Operation Banner 1969-2007. The experiences of these soldiers raise many important and difficult questions on war and policy. When do 'troubles', riots and insurgency become war? How does a liberal state respond to an internal war within its own borders? How does it decide on its rules of engagement for its armed forces? Featuring key interviews with former soldiers, paramilitaries and Special Branch detectives, amongst other key actors, the authors attempt to answer these questions and enhance our knowledge of conflict resolution by providing a deep analysis of one of the most significant British military operations since the Second World War.

Advanced Autonomous Vehicle Design for Severe Environments V.V. Vantsevich, M.V. Blundell, 2015-10-20 Classical vehicle dynamics, which is the basis for manned ground vehicle design, has exhausted its potential for providing novel design concepts to a large degree. At the same time, unmanned ground vehicle (UGV) dynamics is still in its infancy and is currently being developed using general analytical dynamics principles with very little input from actual vehicle dynamics theory. This technical book presents outcomes from the NATO Advanced Study Institute (ASI) 'Advanced Autonomous Vehicle Design for Severe Environments', held in Coventry, UK, in July 2014. The ASI provided a platform for world class professionals to meet and discuss leading-edge research, engineering accomplishments and future trends in manned and unmanned ground vehicle dynamics, terrain mobility and energy efficiency. The outcomes of this collective effort serve as an analytical foundation for autonomous vehicle design. Topics covered include: historical aspects, pivotal accomplishments and the analysis of future trends in on- and off-road manned and unmanned vehicle dynamics; terramechanics, soil dynamic characteristics, uncertainties and stochastic characteristics of vehicle-environment interaction for agile vehicle dynamics modeling; new methods and techniques in on-line control and learning for vehicle autonomy; fundamentals of agility and severe environments; mechatronics and cyber-physics issues of agile vehicle dynamics to design for control, energy harvesting and cyber security; and case studies of agile and inverse vehicle dynamics and vehicle systems design, including optimisation of suspension and driveline systems. The book targets graduate students, who desire to advance further in leading-edge vehicle dynamics topics in manned and unmanned ground vehicles, PhD students continuing their research work and building advanced curricula in academia and industry, and researchers in government agencies and private companies.

Introduction to Probability David F. Anderson, Timo Seppäläinen, Benedek Valkó, 2017-11-02 This classroom-tested textbook is an introduction to probability theory, with the right balance between mathematical precision, probabilistic intuition, and concrete applications. *Introduction to Probability* covers the material precisely, while avoiding excessive technical details. After introducing the basic vocabulary of randomness, including events, probabilities, and random variables, the text offers the reader a first glimpse of the major theorems of the subject: the law of large numbers and the central limit theorem. The important probability distributions are introduced organically as they arise from applications. The discrete and continuous sides of probability are treated together to emphasize their similarities. Intended for students with a calculus background, the text teaches not only the nuts and bolts of probability theory and how to solve specific problems, but also why the methods of solution work.

Foodopoly Wenonah Hauter, 2015-04-07 “A meticulously researched tour de force” on politics, big agriculture, and the need to go beyond farmers’ markets to find fixes (Publishers Weekly). Wenonah Hauter owns an organic family farm that provides healthy vegetables to hundreds of families as part of the Community Supported Agriculture (CSA) movement. Yet, as a leading healthy-food advocate, Hauter believes that the local food movement is not enough to solve America’s food crisis and the public health debacle it has created. In *Foodopoly*, she takes aim at the real culprit: the control of food production by a handful of large corporations—backed by political clout—that prevents farmers from raising healthy crops and limits the choices people can make in the grocery store. Blending history, reporting, and a deep understanding of farming and food production, *Foodopoly* is a shocking, revealing account of the business behind the meat, vegetables, grains, and milk most Americans eat every day, including some of our favorite and most respected organic and health-conscious brands. Hauter also pulls the curtain back from the little-understood but vital realm of agricultural policy, showing how it has been hijacked by lobbyists, driving out independent farmers and food processors in favor of the likes of Cargill, Tyson, Kraft, and ConAgra. *Foodopoly* shows how the impacts ripple far and wide, from economic stagnation in rural communities to famines overseas, and argues that solving this crisis will require a complete structural shift—a change that is about politics, not just personal choice.
