One Hundred Clinical Cases and OSCEs in Surgery
The FRCS Oral and Maxillofacial Surgery (OMFS) exam is split into three parts: written, viva and mock clinical consultations with an examiner and an actor in the role of a patient. These consultations fall into two formats: 'short case', where the examiner poses questions specific to the patient's case, and 'long case' where the candidate must diagnose the patient's presenting problem and suggest an appropriate course of treatment. FRCS (Oral &

Maxillofacial Surgery) Part 2: 100 Clinical Cases focuses on the clinical component of the exam and is structured according the FRCS OMFS syllabus. Each chapter starts with cases devoted to examination of the patient, history taking and investigations. Subsequent cases feature 'short case' clinical scenarios commonly encountered in the exam. Where relevant to exam practice, a 'long case' is included at the end of each chapter. The 'short cases' feature mock questions, while the 'long cases' also include an examiner's mark sheet listing the answers and actions candidates must perform to achieve full marks. First book to cater specifically for the clinical component of the FRCS OMFS exam Ideal for practising scenarios with colleagues and taking turns to play role of either candidate or examiner

OSCEs for Medical Finals has been written by doctors from a variety of specialties with extensive experience of medical education and of organising and examining OSCEs. The book and website package consists of the most common OSCE scenarios encountered in medical finals, together with checklists, similar to OSCE mark schemes, that cover all of the key learning points students need to succeed. Each topic checklist contains comprehensive exam-focussed advice on how to maximise performance together with a range of 'insider's tips' on OSCE strategy and common OSCE pitfalls. Designed to provide enough coverage for those students who want to gain as many marks as possible in their OSCEs, and not just a book which will ensure students 'scrape a pass', the book is fully supported by a companion website at www.wiley.com/go/khan/osces, containing: OSCE checklists from the book A survey of doctors and students of which OSCEs have a high chance of appearing in finals in each UK medical school A 24-year-old woman is referred from the emergency department with sudden onset of left iliac fossa pain and you are the medic on duty... 100 Cases in Obstetrics and Gynaecology presents 100 commonly seen obstetric and gynaecological scenarios. The

reach a decision regarding their condition and the possible management plan, while the answer pages will help the student to understand the processes that a clinician goes through in dealing with the problems presented. Contents are organised to provide a quick review of each body system, with a selection of cases relevant to that specific system, then the majority are presented randomly to mimic real life in a GP surgery or emergency department. New to this edition: a review of each body system as well as random cases; new page design with a second colour used throughout; and brought up-to-date with 25% new cases.

This practical ENT reference guide includes over 100 clinical case scenarios, ranging from basic ENT issues to more challenging clinical cases, presented randomly as they would occur in real life. Each scenario includes thought-provoking questions followed by reasoned answers and is superbly illustrated with diagrams and high quality photographs. This is an invaluable text for otorhinolaryngologists in practice and in training, from hospital-based surgeons preparing for higher examinations to established physicians for their continuing professional development.

Each presenting complaint comes with Full OSCE Mark Schemes and Example Histories to allow you to practice with a partner. Furthermore, there are also detailed Differential Diagnosis, Investigations and Management Plan to help you present to your examiner. Authored by students and doctors in the Top One Percent of their cohort, this is your ultimate companion to OSCE histories and a MUST-BUY for those looking to ace their exams.

Oxford Cases in Medicine and Surgery, second edition, teaches students a hypothesis-driven, logical step-by-step approach to diagnosis when faced with each of 29 common patient presentations. This approach mirrors that used by successful clinicians on the wards, challenging students with questions at each stage of a case (history-taking, examination, investigation, management). In tackling these questions, students understand how to critically analyse information and learn to integrate their existing knowledge to a real-life scenario from start to finish. Each chapter focuses on a common presenting symptom (e.g. chest pain). By starting with a symptom, mirroring real life settings, students

learn to draw on their knowledge of different physiological systems - for example, cardiology, respiratory, gastroenterology - at the same time. All the major presenting symptoms in general medicine and surgery (mapped to UK medical school curricula) are covered, together with a broad range of pathologies. This book is an essential resource for all medicine students, and provides a modern, well-rounded introduction to life on the wards. Ideal for those starting out in clinical medicine and an ideal refresher for those revising for OSCEs and finals. This book contains essential core knowledge that all medical students need to know for the surgical OSCEs in their final exam. It raises advanced issues for ambitious students wanting to go that extra step. OSCEs for Intensive Care Medicine is a comprehensive revision resource for doctors preparing to take the Fellowship of the Faculty of Intensive Care Medicine (FFICM) and the European Diploma in Intensive Care Medicine (EDIC). Written by a team of practicing intensive care consultants with extensive experience running a successful FFCIM course, this book features over 100 practice questions organised into eight mock OSCE exams and is mapped to both the FFCIM and CoBaTrICE curricula. Reflecting the real exams, they are divided into stations on professionalism, data, resuscitation, and equipment, each of which are accompanied by further reading to ensure high-quality self-

valuable reference and teaching tool, which provides an opportunity for case-based learning across a rapidly growing field. This book uses well-structured and concise cases from the Oxford hospitals. Each case has associated questions on the differential diagnosis and aspects of management providing interactive learning material. Cases were chosen to illustrate specific issues of particular relevance to geratology, emphasizing the unusual or occult presentation of disease, the presence of multiple interacting pathologies, possibility for rapid deterioration, high incidence of complications of treatment, including adverse drug reactions and a need at times for difficult clinical decisions. Part of the Oxford Case Histories series, this book will be valuable reading for postgraduate trainees and consultants, and will be an essential resource for those preparing for exit examinations and revalidation. It is also the ideal tool for those who wish to improve their skills in diagnosis and management of a broad range of geriatric disorders.

Most medical schools use this form of evaluation as early of the first year of medicine. This text was designed as a study aid for medical students preparing for clinical skills exams. Colour insert added featuring dermatology photos for practical clinical use. Increase use of evidence-based examination skills where possible. Skills differentiated into essential skills and advanced skills. Enhanced coverage of general women's health in OB/GYN chapter.

It is vitally important for medical students and junior doctors to grasp an understanding of 'real-life medicine'. This innovative book of cases shows how a particular presentation may progress, and the different complications that may arise and emerge over time, which may be missed by the 'snapshot in time' approach taken by many problem-based volumes. The content reflects the average length of stay for a patient in hospital, in which their situation can change in a

multitude of ways, and the management of chronic conditions may also need to be adapted as complications arise.

Demonstrates the real bedside experiences that medical students can expect, in whichever simple or complex way that they may present Cases selected from a range of sub-specialties for comprehensive coverage across the curriculum

Illustrates the complicated, progressive problems that will be seen while practicing as a doctor with detailed diagrams and diagnostic imagery to aid understanding Shows, with timepoints, how differential diagnoses may change as more information becomes available and new symptoms arise

Describes a typical initial hospital stay, and subsequent presentations to the general practitioner and hospital

The 3rd edition of PACES for the MRCP has been fully revised and updated throughout to retain its pole position as the textbook to accompany core medical training (CMT) and prepare candidates for success in the Practical Assessment of Clinical Examination Skills and a future specialty career. Features Fully revised for the new Station 5 and completely

updated throughout. Promotes understanding and deeper learning of modern medicine applicable to PACES and the specialist registrar. Emphasis on clinical assessment – history-taking, examination and communication skills – equipping candidates with appropriate differential diagnoses from which to develop the right diagnosis. Encourages candidates to question why a diagnosis has arisen and consider its consequences. For example, ‘Heat failure’ is not a diagnosis until a candidate has considered the differential diagnoses of breathlessness and decided why heart failure is most likely, and then considered its cause (not always ischaemic heart disease), its presentation (acute, chronic, left or right ventricular or both) and, most importantly, the effects of it and its treatments on a patient’s life. This 3rd edition of PACES for the MRCP continues to provide fully revised, up-to-date, evidence-based coverage of investigations and treatments. Whilst the emphasis of PACES is on clinical skills, candidates who understand when, for example, a patient with rheumatoid arthritis might benefit from a biologic agent and how this will influence inflammatory disease, is better equipped for success. A one-volume text giving candidates complete preparation for the PACES exam within one portable volume 250 cases organised into the 5 stations of the PACES exam – respiratory and abdominal system, history taking, cardiovascular and nervous system, communication and ethics and skin, locomotion, eyes and endocrine systems Engaging question-and-answer approach at the end of each case – excellent preparation for the exam Boxed tips highlight vital information – helps identify what is most important to remember Produced in full colour throughout Colour coding for each station Many more illustrations added - now over 300 clinical photographs and line drawings in colour Many more cases added, bringing the number up to 250 - 50 per station History-taking and communication skills stations now revised

Radiology now forms part of the core curriculum and is assessed in the final medical OSCE. This book includes 100 radiology cases that medical students are likely to encounter in their exams. The book is primarily image based, presenting a clinical history, description of findings and discussion for each image. Critically, the images include modern techniques such as CT and MRI in addition to more traditional photography, and the book helps students recognise and interpret abnormal image findings as well as increasing their factual knowledge. This book is vital reading for final year medical students approaching their final OSCE, and also for junior doctors who need a radiology quick reference guide in clinical practice. It can also be used to supplement MRCS Picture Questions Book 1 (see below) by candidates revising for the MRCS examination.

This title is directed primarily towards health care professionals outside of the United States. It is intended to help you learn how best to approach a clinical problem from a surgical perspective. The text provides an insight into how a surgeon might manage a particular problem and consequently how to prepare for an OSCE that might entirely (or in part) consist of 'surgical' OSCE stations. Although some of the stations in the book could easily be found in a "medicine" OSCE they are presented here from the perspective of both a student seeking to demonstrate well-developed surgical skills within an OSCE setting and a specialist surgical examiner. Presents a series of clinical problems with an emphasis on the surgical approach to the management. Appropriate for all students needing to demonstrate their clinical expertise in surgical cases. A companion book to the highly-commended "Core Clinical Skills for OSCEs in Medicine".

Medical students often feel they understand the theory behind

the clinical aspect of medicine but seldom have enough chance to put what they learn into practice. In addition, clinical examinations pose a challenge to students who may be technically and theoretically excellent, but who have poor examination technique. It is quite common for students to lack understanding of how they will be marked, how much emphasis to place upon certain actions or how much detail is expected of them. 'OSCE CASES WITH MARK SCHEMES' is intended to fill this gap. It provides OSCE mark schemes to reflect the real OSCE experience, by encouraging self assessment when practicing the clinical scenarios. The book includes chapters on communication skills, medical ethics, explanation stations, paediatrics and obstetrics and gynaecology subjects which are sometimes neglected elsewhere. All four authors have taken part in medical student teaching and OSCE examinations. They understand what will earn marks in the actual exam. All the OSCE scenarios are from stations previously examined in the UK's top medical schools. This book prepares the student for what the actual finals exam will be like. CONTENTS: SECTION ONE, COMMUNICATION STATIONS - Presenting Complaints - Psychiatry History Taking - Pediatrics History Taking - Obstetrics History Taking - Gynaecology History Taking - Medical Ethics - Difficult Communication Scenarios - Pharmacology - Consenting - Explanation of Management and Results SECTION TWO, PERFORMANCE STATIONS - Examination Skills - Practical Skills - Data Interpretation - Closing Remarks

A solid knowledge base and good clinical skills don't necessarily guarantee examination success in the long case OSCE. This book is the ultimate guide for medical students needing to combine their knowledge and skills with an ability to interpret the clinical findings, the proficiency to present them clearly and the confidence to deal with the examiners

questions. Adopting a proven, highly effective approach, this revision aid uses role play with simulated patients to hone clinical examination and presentation skills. The fifty cases are divided into six areas: cardiology, respiratory, abdomen, neurology, musculoskeletal and surgery. Written by successful candidates and examiners, the guide poses a number of important and commonly asked examination questions for each case to assist in preparation and confidence, and model answers are provided to ensure an understanding of exactly what is required. Working in groups or independently, students will welcome the large, colourful format, the breakdown of marking schemes, an overview of examiners expectations, a guide to presenting clinical findings and innumerable 'insider' tips throughout. Talley and O'Connor's Clinical Examination addresses the core principles and clinical skills that underpin diagnosis for safe, effective medical practice. The text takes an evidence-based, patient-centric approach to conducting a clinical examination. In Volume 1, readers follow a logical framework ordered by body system, covering history taking, clinical examination and correlation between physical signs and disease for each system. Volume 2 focuses on medical specialties. Originally written by Nicholas J Talley and Simon O'Connor during their registrar years, this book is uniquely targeted to students undertaking their MD or MBBS and is fully updated with the latest clinical data, including specially commissioned research. Data interpretation questions based on clinical cases are a popular means of testing medical students both during undergraduate studies and as an element of finals examinations. Written by a small team of authors with extensive teaching experience, *100 Cases in Medical Data Interpretation* provides invaluable guidance from lecturers who understand from personal experience that detailed and accurate explanations are the key to successful revision. This book presents 100 cases arranged by specialty area—radiology, clinical chemistry, haematology and cardiology—as well as a random section of
