Joseph LeDoux, whose NYU lab has been at the forefront of research efforts to understand and treat fear and anxiety, explains the range of anxiety disorders, their origins, and discoveries that can restore sufferers to normalcy.

The articles gathered in this volume represent examples of a unique approach to the study of mental phenomena: a blend of theory and experiment, informed not just by easily measurable laboratory data but also by human introspection. Subjects such as approach and avoidance, desire and fear, and novelty and habit are studied as natural events that may not exactly correspond to, but at least correlate with, some (known or unknown) electrical and chemical events in the brain.

"It's here! MyPsychLab Where learning comes to life!" An exciting new learning and teaching tool designed to increase student success in the classroom "and" give instructors quick and easy access to every resource needed to teach and administer an introductory psychology course. Learning in context With MyPsychLab students use an actual e-book, in the same layout as the printed version, to launch multimedia resources such as animations, video and audio clips, activities and simulations, and more. Individualized Study Plans MyPsychLab gives students multiple testing and quizzing opportunities in each chapter. Results from these assessments generate an Individualized Study Plan that allows students to pinpoint exactly where additional review is needed. Additional help, always available MyPsychLab offers students free access to the Tutor Center - a one on one service during the hours when they need help most. They also get unlimited access to Research Navigator, an online database of academic journals, with help in writing papers and navigating resources. An easy-to-use solution Instructors can spend as much or as little time as they'd like customizing their course. Content is pre-loaded and ready to use. With a click of the mouse, instructors have access to the test item file, class grade book, PowerPoint slides, lecture outlines, and more! Purchased separately, the student resources in MyPsychLab have a total retail value of \$135, but students get access at no additional cost with their text purchase! Visit www.mypsychlab.com for more details. For related titles and materials, visit our online catalog at www.ablongman.com. "Before, I was seldom able to use multimedia in my classroom because our department has a small budget. Due to this exciting new tool, I now have access to every imaginable resource needed to teach and administer a psychology course!" "Teresa R. Stalvey, Behavioral Science Instructor, North Florida Community College" "The fact that the student names are automatically entered into the grade book is a relief. Being able to check when a student logged in eliminates a few arguments. No more copying syllabi! It's all there for them. I've easily posted class notes, reminders of tests and dates for assignments." "Mary-Ellen O'Sullivan, Psychology Department, Southern Connecticut State University" "You have finally organized all the materials that have been stand-alone items for many years." "Fred Whitford, Montana State University" "This has been the best decision I've made on a textbook. Thanks again for introducing me to this concept." "Kathy Manuel, Psychology Department, Bossier Parish Community College"

This book presents selected and revised papers of the Second Workshop on Adaptive and Learning Agents 2009 (ALA-09), held at the AAMAS 2009 conference in Budapest, Hungary, May 12. The goal of ALA is to provide an interdisciplinary forum for scientists from a variety of fields such as computer science, biology, game theory and economics. This year's edition of ALA was the second after the merger of the former workshops ALAMAS and ALAg. In 2008 this joint workshop was organized for the first time under the flag of both events. ALAMAS was a yearly returning European workshop on adaptive and learning agents and multi-agent systems (held eight times). ALAg was the international workshop on adaptive and learning agents, which was usually held at AAMAS. To increase the strength, visibility and quality of the workshop it was decided to merge both workshops under the flag of ALA and to set up a Steering Committee as an organizational backbone. This book contains six papers presented during the workshop, which were carefully selected after an additional review round in the summer of 2009. We therefore wish to explicitly thank the members of the Program Committee for the quality and sincerity of their efforts and service. Furthermore we would like to thank all the members of the senior Steering Committee for making this workshop possible and supporting it with sound advice. We also thank the AAMAS conference for providing us a platform for holding this event. Finally we also wish to thank all authors who responded to our call-for-papers with interesting contributions.

Gillen's Stroke Rehabilitation: A Function-Based Approach, 3rd Edition is the only comprehensive, evidence-based stroke rehabilitation resource for occupational therapists. Extensively updated with the latest research in assessment and intervention, this essential text presents a holistic, application-based approach that integrates background medical information, samples of functionally based evaluations, and current treatment techniques and intervention strategies to help you confidently manage the growing number of stroke rehabilitation clients. UNIQUE! Case studies challenge you to apply rehabilitation concepts to realistic scenarios. Evidence-based clinical trials and outcome studies clearly outline the basis for stroke interventions. UNIQUE! Survivor's Perspectives help you understand the stroke rehabilitation process from the client's point-of-view. UNIQUE! A multidisciplinary approach highlights discipline-specific distinctions in stroke rehabilitation among occupation and physical therapists, physicians, and speech-language pathologists. Review questions in each chapter help you assess your understanding of rehabilitation concepts. Key terms and chapter objectives at the beginning of each chapter help you study more efficiently. Three new chapters broaden your understanding of stroke intervention in the areas of Using Technology to Improve Limb Function, Managing Speech and Language Deficits after Stroke, and Parenting after Stroke. Learning activities and interactive references on a companion Evolve Resources website help you review textbook content and locate additional information.

This book provides a simple and unified approach to the mechanics of discontinuous-fibre reinforced composites, and introduces readers as generally as possible to the key concepts regarding the mechanics of elastic stress transfer, intermediate modes of stress transfer, plastic

stress transfer, fibre pull-out, fibre fragmentation and matrix rupture. These concepts are subsequently applied to progressive stages of the loading process, through to the composite fractures. The book offers a valuable guide for advanced undergraduate and graduate students attending lecture courses on fibre composites. It is also intended for beginning researchers who wish to develop deeper insights into how discontinuous fibre provides reinforcement to composites, and for engineers, particularly those who wish to apply the concepts presented here to design and develop discontinuous-fibre reinforced composites.

With strong foundations in theory and featuring a wide range of current and international examples, Strategic Advertising Management presents an overview of how advertising works and what is required from a manager's perspective, in the development of an effective communication plan.

Introduction to Criminology, Why Do They Do It?, Second Edition, by Pamela J. Schram Stephen G. Tibbetts, offers a contemporary and integrated discussion of the key theories that help us understand crime in the 21st century. With a focus on why offenders commit crimes, this bestseller skillfully engages students with real-world cases and examples to help students explore the fundamentals of criminology. To better align with how instructors actually teach this course, coverage of violent and property crimes has been integrated into the theory chapters, so students can clearly understand the application of theory to criminal behavior. Unlike other introductory criminology textbooks, the Second Edition discusses issues of diversity in each chapter and covers many contemporary topics that are not well represented in other texts, such as feminist criminology, cybercrime, hate crimes, white-collar crime, homeland security, and identity theft. Transnational comparisons regarding crime rates and the methods other countries use to deal with crime make this edition the most universal to date and a perfect companion for those wanting to learn about criminology in context.

Artificial Intelligence continues to be one of the most exciting and fast-developing fields of computer science. This book presents the 177 long papers and 123 short papers accepted for ECAI 2016, the latest edition of the biennial European Conference on Artificial Intelligence, Europe's premier venue for presenting scientific results in AI. The conference was held in The Hague, the Netherlands, from August 29 to September 2, 2016. ECAI 2016 also incorporated the conference on Prestigious Applications of Intelligent Systems (PAIS) 2016, and the Starting AI Researcher Symposium (STAIRS). The papers from PAIS are included in this volume; the papers from STAIRS are published in a separate volume in the Frontiers in Artificial Intelligence and Applications (FAIA) series. Organized by the European Association for Artificial Intelligence (EurAI) and the Benelux Association for Artificial Intelligence (BNVKI), the ECAI conference provides an opportunity for researchers to present and hear about the very best research in contemporary AI. This proceedings will be of interest to all those seeking an overview of the very latest innovations and developments in this field.

Brains rule the world, and brain-like computation is increasingly used in computers and electronic devices. Brain-like computation is about processing and interpreting data or directly putting forward and performing actions. Learning is a very important aspect. This book is on reinforcement learning which involves performing actions to achieve a goal. The first 11 chapters of this book describe and extend the scope of reinforcement learning. The remaining 11 chapters show that there is already wide usage in numerous fields. Reinforcement learning can tackle control tasks that are too complex for traditional, hand-designed, non-learning controllers. As learning computers can deal with technical complexities, the tasks of human operators remain to specify goals on increasingly higher levels. This book shows that reinforcement learning is a very dynamic area in terms of theory and applications and it shall stimulate and encourage new research in this field.

Our health system resembles a repair service which treats illness and suffering. But in many cases it would seem much simpler to avoid health problems. Why do we wait until the illnesses have developed? Young and expectant families are particularly

interested in maintaining the health of their children and their whole family. Since prevention must begin long before the emergence of illness, there can be no better time to start than the beginning of life. This book presents a range of contributions that not only encourage theoretical reflection about the topics discussed but also provide practical suggestions.
