Rock 'n' roll, revolution, and romance are seductively woven together in this intense and moving novel from the author of *Twenty Fragments of a Ravenous Youth*. In her flat in north London, Iona Kirkpatrick sets to work on a new project translating a collection of letters and diaries by a Chinese musician. With each letter and journal entry, Iona becomes more and more intrigued with the unfolding story of two lovers: Jian, a punk rocker who believes there is no art without political commitment, and Mu, the young woman he loves as fiercely as his ideals. Iona cannot possibly know that Jian is mere miles away in Dover, awaiting the uncertain fate of a political exile. Mu is still in Beijing, writing letters to London and desperately trying to track Jian down. As Iona charts the course of their twenty-year relationship, from its early beginnings at Beijing University to Jian's defiant march in the Jasmine Revolution, her own empty life takes on an urgent purpose: to bring Jian and Mu together again before it's too late.

Using a dataset covering a large sample of emerging economies (EMEs), we study the relationship between debt and economic performance in bad times. While previous research has shown that private debt buildups exacerbate the duration and intensity of recessions in advanced economies (AEs), we document that this effect is very pronounced in EMEs as well. Moreover, although rapid public debt buildups are unlikely to be the primary trigger of financial crises, in EMEs they are associated with deeper and longer recessions than in AEs. Part of this difference is explained by a less supportive fiscal policy in EMEs during crises.

This important book tackles some of the main security challenges facing the international development community today. Containing contributions by leading experts, including some who have been at the centre of the international policy debate, it goes further by putting forward suggestions and recommendations as to how best deal with these threats as well as challenges in this crucial area.

In economics, the voluntary sector is surprisingly understudied. In order to fully understand economics, unpaid and voluntary work needs to be taken into account and afforded the same status as paid activities. This book constitutes a rigorous economic analysis with special emphasis on gender issues and covers every conceivable angle of unpaid work and all its ramifications for the modern economy. The unified vision offered by this group of leading contributors ensures this book is a work of excellent quality. There is every chance it will become a seminal study on unpaid work and as such will provide a useful reference for students and academics involved in gender studies, econometrics, and consumption studies.

In an estimated two-sector New-Keynesian model with durable and nondurable goods, an inverse relationship between sectoral labor mobility and the optimal weight the central bank should attach to durables inflation arises. The combination of nominal wage stickiness and limited labor mobility leads to a nonzero optimal weight for durables inflation even if durables prices were fully flexible. These results survive alternative calibrations and interest rate rules and point toward a non-negligible role of sectoral labor mobility for the conduct of monetary policy.

Strategy and Business 2012 Organizational Culture Book of the Year This third edition of the classic resource, *Productive Workplaces* is smart, well-written and well-researched, thoughtful, somewhat provocative, and a one-of-a-kind review of the integration of economics, technology, and people. It covers such topics as: the work on self as integral to organizational change; the revision of Lewinian concepts for a new era; and the history behind “getting everybody improving whole systems” as a response to fast change and increasing diversity (not the same as using any particular method). The themes, case studies (many revisited), and models are as relevant as ever.

The driving cultural force of that form of life we call ‘modern’ is the desire to make the world controllable. Yet it is only in encountering the uncontrollable that we really experience the world – only then do we feel touched, moved and alive. A world that is fully known, in which everything has been planned and mastered, would be a dead world. Our lives are played out on the border between what we can control and that which lies outside our control. But because we late-modern human beings seek to make the world controllable, we tend to encounter the world as a series of objects that we have to conquer, master or exploit. And precisely because of this, ‘life,’ the experience of feeling alive and truly encountering the world, always seems to elude us. This in turn leads to frustration, anger and even despair, which then manifest themselves in, among other things, acts of impotent political aggression. For Rosa, to encounter the world and achieve resonance with it requires us to be open to that which extends beyond our control. The outcome of this process cannot be predicted, and this is why moments of resonance are always concomitant with moments of uncontrollability. This short book – the sequel to Rosa’s path-breaking work on social acceleration and resonance – will be of great interest students and scholars in sociology and the social sciences and to anyone concerned with the nature of modern social life.

Shows how managers can use the conceptual framework of TPC theory (technical, political, and cultural dynamics) to cope with major strategic reorientation. Raises such fundamental questions about the nature of organizations. What business(es) should we be in? Who should reap what benefits from the organization? What are the values and norms of organizational members? Provides concepts and workable technologies for dealing with these questions and preparing for future change. Includes extensive examples.

We revisit the empirical relationship between private/public debt and output, and build a model that reproduces it. In the model, the government provides financial assistance to credit-constrained agents to mitigate deleveraging. As we observe in the data, surges in private debt are potentially more damaging for the economy than surges in public debt. The model suggests two policy implications. First, capping leverage leads to milder recessions, but also implies more muted expansions. Second, with fiscal buffers, financial assistance to credit-constrained agents helps avoid stagnation. The growth returns from intervention decline as the government approaches the fiscal limit.

Corporations determine far more than any other institution, the air we breathe, the quality of water we drink, even where we live--yet they are not accountable to anyone. Authors Robert Monks and Nell Minow take up the cause of corporate accountability and shareholders rights in this controversial book that is sure to shake up America's corporate power elite.

Collects the first three installments of the best-selling series in a boxed set that includes *Rich Dad Poor Dad*, *Rich Dad's Cashflow Quadrant*, and *Rich Dad's Guide to Investing*, in a compendium that covers such topics as the financial management secrets of the wealthy class

and effective ways to raise money. Original. 10,000 first printing.

This book is intended to provide the student with a clear and thorough presentation of the theory and application of structural analysis as it applies to trusses, beams, and frames.

"There are two sides to every story. You've heard Thor's -- now it's time to hear Loki's. Odin's least favorite son rewrites Asgardian lore from his perspective! Loki's insatiable lust for power, his conflicted sentiments toward Sif, his antipathy toward Balder, and the deep-seated feelings of longing and resentment toward his older brother, Thor, and uncaring father, Odin, will take on new meaning"--P. [4] of cover.

The Olympic Games have become the definitive sports event, with an unparalleled global reach and a remarkably diverse constituency of stakeholders, from the IOC and International Federations to athletes, sponsors and fans. It has been estimated, for example, that 3.6 billion people (about half of the world population) watched at least one minute of the Beijing Games in 2008 on television. The driving force behind the rise of the modern Olympics has been the Olympic marketing programme, which has acted as a catalyst for cooperation between stakeholders and driven the promotion, financial security and stability of the Olympic movement. This book is the first to explain the principles of Olympic marketing and to demonstrate how they can be applied successfully in all other areas of sports marketing and management. The book outlines a strategic and operational framework based on three types of co-productive relationships (market, network and informal) and explains how this framework can guide professional marketing practice. Containing case studies, summaries, insight boxes and examples of best practice in every chapter, this book is important reading for all students and practitioners working in sports marketing, sports management or Olympic studies.

This paper studies the effect of public sector efficiency on firm productivity using data from more than 400,000 firms across Italy's provinces. Exploiting the large heterogeneity in the efficiency of the public sector across Italian provinces and the intrinsic variation in the dependence of industries on the government, we find that public sector inefficiency significantly reduces the labor productivity of private sector firms. The results suggest that raising public sector efficiency could yield large economic benefits: if the efficiency in all provinces reached the frontier, output per employee for the average firm would increase by 9 percent.

The final book from a towering pioneer in the study of poverty and inequality—a critically important examination of poverty around the world In this, his final book, economist Anthony Atkinson, one of the world's great social scientists and a pioneer in the study of poverty and inequality, offers an inspiring analysis of a central question: What is poverty and how much of it is there around the globe? The persistence of poverty—in rich and poor countries alike—is one of the most serious problems facing humanity. Better measurement of poverty is essential for raising awareness, motivating action, designing good policy, gauging progress, and holding political leaders accountable for meeting targets. To help make this possible, Atkinson provides a critically important examination of how poverty is—and should be—measured. Bringing together evidence about the nature and extent of poverty across the world and including case studies of sixty countries, Atkinson addresses both financial poverty and other indicators of deprivation. He starts from first principles about the meaning of poverty, translates these into concrete measures, and analyzes the data to which the measures can be applied. Crucially, he integrates international organizations' measurements of poverty with countries' own national analyses. Atkinson died before he was able to complete the book, but at his request it was edited for publication by two of his colleagues, John Micklewright and Andrea Brandolini. In addition, François Bourguignon and Nicholas

Stern provide afterwords that address key issues from the unfinished chapters: how poverty relates to growth, inequality, and climate change. The result is an essential contribution to efforts to alleviate poverty around the world.

Recoge: 1.Introduction. - 2.Childcare services. - 3.Leave facilities. - 4.Flexible working-time arrangements. - 5.Financial allowances. - 6.Reasons for and effects of employer involvement. - 7.Concluding remarks.

The very word taxes sends shivers up spines. Yet, very few realize the tremendous impact that taxation has had on civilization. Charles Adams changes that in this fascinating history. Taxation, says Mr. Adams, has been a catalyst of history, the powerful influence if not the direct cause of many of the famous events of history that have marched across the world's stage as empires collided and battled for the right to tax the loser. For Good and Evil is the first book to examine how taxation has been a key factor in world events. Like the Rosetta Stone - a tax document - the book sheds fresh light onto much of history. Did you know that biblical Israel split after Solomon's death because his son refused to cut taxes? That Rome rose to greatness due to a liberal tax regime but declined under corrupt and inefficient ones? That in Britain, Lady Godiva made her famous ride as a tax protest? That in Switzerland William Tell shot the apple off his son's head as punishment for tax resistance? Or that Fort Sumter, where the first shots of the Civil War were fired, was a Customs House? Combining facts with thought-provoking comment he frequently draws parallels between tax events of the past and those of the present. Finding fault with the way Western civilization is taxed, Adams provides ideas for curing those faults by using the valuable lessons that history has taught. The special value of this refreshing new look at history lies in the lessons to be drawn by all thinking taxpayers. "Taxes are the fuel that makes civilization run, but how we tax and spend determines to a large extent whether we are prosperous or poor, free or enslaved, and most importantly, good or evil." Once you read For Good and Evil, you'll never feel the same about taxes!

This book brings together leading scholars and practitioners, to explore contemporary challenges in the field of European private law, identify problems, and propose solutions. The first section reassesses the existing theoretical framework and traditional legal scholarship on which European private law has developed. The book then goes on to examine important and practical topics of geo-blocking and standardisation in the context of recent legislative developments and the CJEU case law. The third section assesses the challenging subject of adequate regulation of online platforms and sharing economy that has been continuously addressed in the recent years by European private law. A fourth section deals with the regulatory challenges brought by an increasing development of artificial intelligence and blockchain technology and the question of liability. The final section examines recent European legislative developments in the area of digital goods and digital content and identifies potential future policy directions in which the European private law may develop in the future. Drawing both on micro and macro, national and comparative studies, this volume traces some of the trends and analyzes in comparative perspective how they affect images and practices of childhood and transforms responsibilities for children.

A lively collection of stories about robotic revolution and human resistance includes contributions by such genre luminaries as Alan Dean Foster, Corey Doctorow and Ian McDonald. Original. 30,000 first printing.

This paper builds a model-based dynamic monetary and fiscal conditions index (DMFCI) and uses it to examine the evolution of the joint stance of monetary and fiscal policies in the euro area (EA) and in its three largest member countries over the period 2007-2018. The index is based on the relative impacts of monetary and fiscal policy on demand using actual and simulated data from rich estimated models featuring also financial intermediaries and long-term government debt. The analysis highlights a short-lived fiscal expansion in the aftermath of the Global Financial Crisis, followed by a quick tightening, with monetary policy left to be the “only game in town” after 2013. Individual countries’ DMFCIs show that national policy stances did not always mirror the evolution of the aggregate stance at the EA level, due to heterogeneity in the fiscal stance.

The increasing use of artificial intelligence within the workplace is likely to cause significant disruption to the labour market and in turn, to the economy, due to a reduction in the number of taxable workers. In this innovative book, Xavier Oberson proposes taxing robots as a possible solution to the anticipated problem of declining tax revenues.

Questo libro di storia potrebbe contenere numerosi refusi e parti di testo mancanti. Solitamente gli acquirenti hanno la possibilità di scaricare gratuitamente una copia scansionata del libro originale (senza refusi) direttamente dall'editore. Il libro è non illustrato. 1804 edition. Estratto: ...ad altri le redini dei suoi regni; erano, dico, sì grandi le sue spese, sì vasti i suoi disegni, che non bastandogli le antiche e nuove rendite di tanta parte ch'ei possedeva nel mon-do, penso far nuovo guadagno sulle monete; e del 1540 lo scudo d'oro di Castiglia, Valenza ed Aragona, che prima batteva del pari con li ducati d'oro Veneziani, Fiorentini, Senesi, Ongari ed altri che erano allora di tutta bontà di 24 carati, o poco meno, ridusse a bontà di carati 21 soldi 18 che a conto Veneto si direbbe pezo 108 per inarca, e ne diminuì eziandio di tre grani il peso nel modo che tutt'oggi vediamo le mezze doppie di Spagna, non altro volendo dire una doppia che una moneta da due scudi d'oro, ossia un doppio scudo d'oro. Ma veduto dagli altri principi lo svario di queste nuove monete, e ben conoscendo che se ammettevano le mezze doppie di Carlo V al pari de' zecchini Veneziani e Fiorentini si tiravano addosso un danno irreparabile, perché sarebbero stati portati fuori de' loro stati gli scudi d'oro buoni ed introdotti gli altri di minor peso e bontà, risolsero d'imitarle; ed allora fu che il Papa e gli altri potentati quasi tutti d'Italia cominciarono a battere li loro scudi d'oro, doppie e doppioni di bontà inferiore non solo a' primi ma a' quegli stessi di Carlo V, e la corte Romana per sfuggire il pregiudizio che portava alle sue entrate la diminuzione dello scudo d'oro, ha ritenuto dipoi il costume di valutare lo scudo d'oro di camera un paolo più dello scudo di oro corrente, ossia della mezza doppia.-. Tanto narra il Bodino nel più volte accennato Trattato, sebbene io vedo tuttora aver corso doppie e...

ORIGINAL DESCRIPTION (1958): “... In this book John Christy and Karl Ludvigsen have set down not only the joy of MG ownership but a comprehensive history showing how it all began. However, they haven't stopped there. A major portion of the book is devoted to maintaining and improving the more popular variants—from the TC through TD, TF, TF-1500, to the current MGA. These portions (with certain minor exceptions) were done directly from data supplied by Mr. Sydney Enever, who heads Abingdon's competition department. For those owners of the marque who are interested in continuous maintenance and improvement—and what truly shriven MG owner isn't?—this is must reading ...”

This powerful book tells the story of one teacher's odyssey to understand the inner world of immigrant children, and to create a learning environment that is responsive to these students' feelings and their needs. Featuring the voices and artwork of many immigrant children, this text

portrays the immigrant experience of uprooting, culture shock, and adjustment to a new world, and then describes cultural, academic, and psychological interventions that facilitate learning as immigrant students make the transition to a new language and culture. Particularly relevant for courses dealing with multicultural and bilingual education, foundations of education, and literacy curriculum and instruction, this text is essential reading for all teachers who will -- or currently do -- work in today's school environment.

The expected post-BEPS project changes to the Model Convention As a result of the Actions under the BEPS Action Plan, the OECD plans to update its Model Convention in the near future. The proposed changes particularly concern the introduction of savings and limitation on benefits clauses, reconsideration of the treaty entitlement for fiscally transparent entities and articulation of various proposals with regard the current concept of permanent establishment and limitations on the abuse thereof. This book includes 12 chapters that analyse the expected post-BEPS project changes to the Model Convention and the possibility of updating treaties on the basis of the multilateral instrument, rather than bilateral negotiations. The book incorporates the perspectives of leading scholars and practitioners dealing with international tax matters. Essential insights are provided for academics, practitioners, tax officials and judges who deal with or are interested in the field of international taxation.

The emergence of convertible decentralized virtual currency schemes confronts tax authorities with unprecedented questions, among them are the status of virtual currency for tax purposes, which virtual transactions may bene?t from a VAT exemption and determining the most optimal method of tax regulation. This ?rst book-length treatment of this major current topic provides an in-depth and comprehensive analysis of the tax implications of virtual currency transactions. Seeking to ascertain whether virtual currency requires additional regulation or whether the law as it stands is adequate to administer its usage, the analysis not only thoroughly explains the nature of the underlying blockchain technology and its regulatory and judicial treatment so far but also identi?es best practices for virtual currency transactions and makes recommendations for the improvement of the existing tax systems. Among the aspects of the phenomenon covered are the following: – particular aspects of virtual currency use such as smart contracts and initial coin offerings; – comparative review of income tax consequences of virtual currency transactions in Germany, the Netherlands, the United Kingdom and the United States; – VAT/sales tax treatment of transactions involving virtual currency in the European Union and the United States; – methodology for creating an effective regulatory framework for the taxation of virtual currency; and – the future of blockchain. The book has three parts and an annex that describes tax regulations, administrative rulings and court decisions concerning virtual currency in twenty countries. In its in-depth analysis of tax implications of virtual currency transactions in major economies, detailed overview of recent tax developments that affect virtual currency transactions and evaluation of tax policies related to virtual currencies, this book has no peers. Especially in view of the OECD's examination of the tax challenges presented by the digital economy as part of its base erosion and pro?t shifting (BEPS) project, this clear and comprehensive explanation of the functioning of virtual currency and blockchain technology will be welcomed by tax administration of?cials and by persons

mining and transacting in virtual currencies needing to know their compliance obligations.

Credit is key to support healthy and sustainable economic growth but excess aggregate credit growth can signal the build-up of imbalances and lead to systemic financial crisis. Hence, monitoring the credit cycle is key to identifying vulnerabilities, particularly in emerging markets, which tend to be more exposed to sudden external shocks and reversal in capital flows. We estimate the credit cycle in Central America, Panama, and the Dominican Republic and find that the credit gap is a powerful predictor of systemic vulnerability in the region. We simulate the activation of the Basel III countercyclical capital buffers and discuss the macroprudential policy implications of the results, arguing that countercyclical macroprudential policies based on the credit gap could prove useful to enhance the resilience of the region's financial sector but the activation of macroprudential instruments should also be informed by the development of other macrofinancial variables and by expert judgment.

Firewalls are among the best-known network security tools in use today, and their critical role in information security continues to grow. However, firewalls are most effective when backed by thoughtful security planning, well-designed security policies, and integrated support from anti-virus software, intrusion detection systems, and related tools. *GUIDE TO FIREWALLS AND VPNs, THIRD EDITION* explores firewalls in the context of these critical elements, providing an in-depth guide that focuses on both managerial and technical aspects of security. Coverage includes packet filtering, authentication, proxy servers, encryption, bastion hosts, virtual private networks (VPNs), log file maintenance, and intrusion detection systems. The text also features an abundant selection of realistic projects and cases incorporating cutting-edge technology and current trends, giving students the opportunity to hone and apply the knowledge and skills they will need as working professionals. *GUIDE TO FIREWALLS AND VPNs* includes new and updated cases and projects, enhanced coverage of network security and VPNs, and information on relevant National Institute of Standards and Technology guidelines used by businesses and information technology professionals. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Organizational Effectiveness: A Comparison of Multiple Models directly addresses the issues of non-integration and non-comparability. This book not only provides well thought out approaches to effectiveness as a construct, but also practical suggestions for improving effectiveness in organizations. A set of integrating questions that raise theoretical, conceptual, empirical, research, practical, and managerial issues are also included. This text likewise compares and contrasts theoretical and philosophical roots of a particular perspective with other perspectives. This publication is intended for scholars and researchers seeking to understand and measure organizational effectiveness, as well as

practitioners who are faced with the problem of managing and improving their own organization's effectiveness.

This paper examines some of the factors that have been influential in keeping inflation low in the United States during 1995–98, despite strong growth and high levels of employment. Our results identify three important variables: declines in import prices, a slowdown in the growth of nonwage labor compensation, and a decline in labor costs. We also reassess the role of labor costs and import prices in determining price inflation.

When the athletes enter the stadium and the Olympic flame is lit, the whole world watches. Billions will continue to follow the events and to share in the athletes' joys and sorrows for the next sixteen days. Readers of this book, however, will watch forthcoming editions of the Olympic Games in a completely different light. Unlike many historical or official publications and somewhat biased commercial works, it provides -- in a clear, readable form -- informative and fascinating material on many aspects of what Olympism is all about: its history, its organization and its actors. Although public attention is often drawn to various issues surrounding this planetary phenomenon -- whether concerning the International Olympic Committee, the athletes, the host cities or even the scandals that have arisen -- the Olympic System as such is relatively little known. What are its structures, its goals, its resources? How is it governed and regulated? What about doping, gigantism, violence in the stadium? In addition to providing a wealth of information on all these subjects, the authors also show how power, money and image have transformed Olympism over the decades. They round off the work with thought-provoking reflections regarding the future of the Olympic System and the obstacles it must overcome in order to survive.
