Treatise on Geophysics, Second Edition, is a comprehensive and in-depth study of the physics of the Earth beyond what any geophysics text has provided previously. Thoroughly revised and updated, it provides fundamental and state-of-the-art discussion of all aspects of geophysics. A highlight of the second edition is a new volume on Near Surface Geophysics that discusses the role of geophysics in the exploitation and conservation of natural resources and the assessment of degradation of natural systems by pollution. Additional features include new material in the Planets and Moon, Mantle Dynamics, Core Dynamics, Crustal and Lithosphere Dynamics, Evolution of the Earth, and Geodesy volumes. New material is also presented on the uses of Earth gravity measurements. This title is essential for professionals, researchers, professors, and advanced undergraduate and graduate students in the fields of Geophysics and Earth system science. Comprehensive and detailed coverage of all aspects of geophysics Fundamental and state-of-the-art discussions of all research topics Integration of topics into a coherent whole

One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field. Hence, at this point in history we are in a unique position to gain first-hand insight into the field and its development. To this end, The Century of Space Science, a scholarly, authoritative, reference book presents a chapter-by-chapter retrospective of space science as studied in the 20th century. The level is academic and focuses on key discoveries, how these were arrived at, their scientific consequences and how these discoveries advanced the thoughts of the key players involved. With over 90 world-class contributors, such as James Van Allen, Cornelis de Jager, Eugene Parker, Reimar Lüst, and Ernst Stuhlinger, and with a Foreword by Lodewijk Woltjer (past ESO Director General), this book will be immensely useful to readers in the fields of space science, astronomy, and the history of science. Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection.

The U.S. Census Bureau reports particular demographic, social, and health conditions for African Americans. Population-wide, the African American community has a higher mortality rate from cancer and diabetes than the rest of the population, a higher infant mortality rate, and a lower vaccination rate for influenza and pneumonia. The contributions to this comprehensive Handbook of African American Health uncover the specific demographic conditions of the African American population, and outline social interventions for both physical and mental health at the primary, secondary, and tertiary levels. The 26 contributions to this comprehensive volume cover interventions for a diverse range of health problems, including:-obesity and cardiovascular disease-diabetes-asthma and other respiratory diseases-smoking, alcohol, and recreational drug abuse-risky sexual behaviors-cancer screening, prevention, and survivorship-infant mortality-community and interpersonal violence-mental health. From a healthcare standpoint, it also examines specific interventions for treatment compliance, health care access, and community collaborations. This volume will be an invaluable resource for researchers in medical sociology, mental health studies, public health, health behavior, and African American studies.

"50 Years with Car and Driver commemorates the golden anniversary of the most popular car magazine on the planet. But more than that, 50 Years with Car and Driver tells the story of the American automobile and how the editors of the magazine witnessed that history and reported on it, firsthand. A look at how Car and Driver evolved from its beginnings as Sports Cars Illustrated, in the able hands of great automotive journalists such as Ken Purdy and John Christy, and then came into its own as the musclecar era of the Sixties dawned. Writers such as David E. Davis, Jr., Brock Yates and Patrick Bedard helped to craft a literary car magazine that drew as much inspiration from Tom Wolfe's writing as it did from the great cars of the day." "Through the Seventies the magazine's reputation solidified as the technical authority on new cars, and the literary tradition continued with such writers as Don Sherman and author P.J. O'Rourke." "Throughout the Eighties, the magazine prospered even when its writers went off the deep end - literally, getting stranded in Mexico during a Baja comparison test. Car and Driver watched over the virtual rebirth of the American car during that decade, with the renaissance at Ford through the Taurus and the revival of the Corvette, while keeping its lock on the strongest feature writing in the auto magazines with stories like Brock Yates's thirty-years-past observance of the death of James Dean." "The Nineties saw Car and Driver continue its leadership as the world's largest-selling automotive magazine. From the introduction of the Acura NSX and the Mazda Miata to the brand-new Mustangs and Corvettes that have come in just the past years, Car and Driver has been the authority that readers trust when it comes to 0-60 times, road tests and reviews." "Fifty Years with Car and Driver combines classic stories from the magazine, commentary by former staffers including the author, vintage and modern photos of the hottest and most important cars reviewed by the magazines, as well as stories from behind the scenes - with all the attitude, expertise and visual excitement readers have come to expect from the magazine itself."--BOOK JACKET.

Exploring Psychology, Eighth Edition in Modules is the modular version of the #1 bestselling brief introduction to psychology: David Myers's Exploring Psychology. All the Myers hallmarks are here—the captivating writing, coverage based on the latest research, helpful pedagogical support—in a format that delivers the utmost in student accessibility and teaching flexibility.

Americans take for granted that when we flip a switch the light will go on, and when we pull up to the pump gas will be plentiful and relatively cheap. Here, Michael Graetz shows us that we have been living an energy delusion for forty years. Until the 1970s, we produced domestically all the oil we needed. Since then, we have had to import most of the oil we use, and we rely on an even dirtier fuel--coal--to produce half of our electricity. Graetz describes decades of energy policy incompetence--from the Nixon administration's

fumbled response to the OPEC oil embargo to the current political standoff over "cap and trade"--And argues that we must make better decisions for our energy future. Until Americans face the facts about price, our energy incompetence will continue--and along with it the unraveling of our environment, security, and independence.--From publisher description.

Segregation: The Rising Costs for America documents how discriminatory practices in the housing markets through most of the past century, and that continue today, have produced extreme levels of residential segregation that result in significant disparities in access to good jobs, quality education, homeownership attainment and asset accumulation between minority and non-minority households. The book also demonstrates how problems facing minority communities are increasingly important to the nation's long-term economic vitality and global competitiveness as a whole. Solutions to the challenges facing the nation in creating a more equitable society are not beyond our ability to design or implement, and it is in the interest of all Americans to support programs aimed at creating a more just society. The book is uniquely valuable to students in the social sciences and public policy, as well as to policy makers, and city planners.

Climate Change is forcing us to re-think our use of fossil fuels - the oil, coal, and gas that we have depended upon for generations. A rising global population means that there is an unprecedented level of demand on the world's energy resources. And there are still desperately poor areas of the world that remain unconnected to a national grid. The Rough Guide to the Energy Crisis examines these important issues, and explains the many challenges facing energy today, and explores possible solutions. KEY TOPICS INCLUDE: -Energy today: We take our energy for granted. But what do we use, and where does it come from? -Peak Oil: How long do we have before oil production peaks? Has it peaked already? -Renewables: Can wind turbines, solar panels, and wave and tidal power really keep the lights on? -Nuclear: How safe are the power plants? And can you be a pro-nuclear green? -Climate Change: Our energy use has environmental consequences. Are their technological answers? And can our lifestyles adapt? Keeping the planet safe while keeping the world moving is perhaps the most important challenge we currently face. The Rough Guide to the Energy Crisis examines the many sides of this problem, and how it could be approached, with erudition and accessibility.

From The Big Sleep to Babette's Feast, from Lawrence of Arabia to Drugstore Cowboy, The Movie Guide offers the inside word on 3,500 of the best motion pictures ever made. James Monaco is the president and founder of BASELINE, the world's leading supplier of information to the film and television industries. Among his previous books are The Encyclopedia of Film, American Film Now, and How to Read a Film.

Nowadays embedded and real-time systems contain complex software. The complexity of embedded systems is increasing, and the amount and variety of software in the embedded products are growing. This creates a big challenge for embedded and real-time software development processes and there is a need to develop separate metrics and benchmarks. "Embedded and Real Time System Development: A Software Engineering Perspective: Concepts, Methods and Principles" presents practical as well as conceptual knowledge of the latest tools, techniques and methodologies of embedded software engineering and real-time systems. Each chapter includes an in-depth investigation regarding the actual or potential role of software engineering tools in the context of the embedded system and real-time system. The book presents state-of-the art and future perspectives with industry experts, researchers, and academicians sharing ideas and experiences including surrounding frontier technologies, breakthroughs, innovative solutions and applications. The book is organized into four parts "Embedded Software Development Process", "Design Patterns and Development Methodology", "Modelling Framework" and "Performance Analysis, Power Management and Deployment" with altogether 12 chapters. The book is aiming at (i) undergraduate students and postgraduate students conducting research in the areas of embedded software engineering and real-time systems; (ii) researchers at universities and other institutions working in these fields; and (iii) practitioners in the R&D departments of embedded system. It can be used as an advanced reference for a course taught at the postgraduate level in embedded software engineering and real-time systems.

Homeland is Pulitzer Prize winning author Maharidge's biggest and most ambitious book yet, weaving together the disparate and contradictory strands of contemporary American society--common decency alongside race rage, the range of dissenting voices, and the roots of discontent that defy political affiliation. Here are American families who can no longer pay their medical bills, who've lost high-wage-earning jobs to NAFTA. And here are white supremacists who claim common ground with progressives. Maharidge's approach is rigorously historical, creating a tapestry of today as it is lived in America, a self-portrait that is shockingly different from what we're used to seeing and yet which rings of truth.

This book examines the development of collective security by regional organisations particularly after the Cold War. It analyses the various constitutional developments that have occurred within regional arrangements such as ECOWAS, African Union, SADC, OAS, and NATO and critically analyses how these developments have propelled regional organisations to depart from the normative framework of regional arrangement contained in Chapter VIII of the UN Charter. Through a comprehensive examination of practice, the book evaluates the impact of regional organisations' newly asserted powers to authorise enforcement action and determine when situations within member states warrant their intervention. It inquires into the legal justifications for these developments both from within the UN Charter and regional treaties and practice and asks whether consensual intervention, that is the use of force by regional organisations on the basis of their members' consent, contravenes or constitutes an exception to the prohibition of the use or threat of force under Article 2(4) of the Charter. The book also analyses the regime of complementarity between the UN and regional organisations.

Accurate and reliable biographical information essential to anyone interested in the world of literature TheInternational Who's Who of Authors and Writersoffers invaluable information on the personalities and organizations of the literary world, including many up-and-coming writers as well as established names. With over 8,000 entries, this updated edition features: \* Concise biographical information on novelists, authors, playwrights, columnists, journalists, editors, and critics \* Biographical details of established writers as well as those who have recently risen to prominence \* Entries detailing career, works published, literary awards and prizes, membership, and contact addresses where available \* An extensive listing of major international literary awards and prizes, and winners of those prizes \* A directory of major literary organizations and literary agents \* A listing of members of the American Academy of Arts and Letters

Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database.

This book features eleven contributions on the fundamental principles of EEA law: legislative and judicial homogeneity, reciprocity, prosperity, priority, authority, loyalty, proportionality, equality, liability and sovereignty. Written by EFTA Court and national judges, high EFTA officials, private practitioners and scholars, it raises awareness of EEA law and provides insights for EEA and EU law practitioners and researchers. It focuses on the principles at the core of EEA law, some of which are common to EU and EEA law, while others have a specific place in EEA law and some ensure consistency between the EEA Agreement and the Treaty on the Functioning of the European Union. It is the only book to focus on the fundamental principles of EEA law.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

The Psychology of Police Deadly Force Encounters: Science, Practice, and Police is a fascinating look into the reality of police work. The author integrates noted theories into a “street-wise” understanding of being a police officer. The focus of this book is on the use of deadly force by officers—a topic of considerable importance. The author discusses the psychosocial aspects of deadly force use, stemming from the individual officer, the situation, organizational influences, and the police culture. Expanding further into social issues, the controversial topic of race and use of deadly force is discussed. This depiction looks at both sides—that of racial victimization and that of the police—which helps to provide a rather unique perspective on this important issue. Of interest, the author breaks down the different dimensions of cognition as a factor in decision making among police, including the perception of the situation, the action taken depending on that perception, and the role of present and past memory. This will make for a useful training topic to alert officers to the cognitive processes that go into deadly force use—processes that they have the control to change to make a better decision. Next, the book delves into the biological factors that may be involved in police decision making—again where deadly force is involved. The various negative psychological impacts that a deadly force situation may bring about are identified and explained. This book will be useful as a tool for both law enforcement practitioners and researchers to better understand the intricacies of deadly force by the police. For researchers, the book has a multitude of references available for further exploration. It will prove to be a useful guide and reference volume for police managers and supervisors, mental health clinicians, investigators, attorneys, judges, law enforcement educators and trainers, rank and file police officers, including expert witnesses.

Offering coverage of over 6,000 slang words and expressions from the Cockney 'abaht' to the American term 'zowie', this is the most authoritative dictionary of slang from the 20th and 21st centuries.

Written by a pioneer in the field, this text provides a complete introduction to X-ray microscopy, providing all of the technical background required to use, understand and even develop X-ray microscopes. Starting from the basics of X-ray physics and focusing optics, it goes on to cover imaging theory, tomography, chemical and elemental analysis, lensless imaging, computational methods, instrumentation, radiation damage, and cryomicroscopy, and includes a survey of recent scientific applications. Designed as a 'one-stop' text, it provides a unified notation, and shows how computational methods in different areas are linked with one another. Including numerous derivations, and illustrated with dozens of examples throughout, this is an essential text for academics and practitioners across engineering, the physical sciences and the life sciences who use X-ray microscopy to analyze their specimens, as well as those taking courses in X-ray microscopy.

About one person in a hundred will be diagnosed with schizophrenia at some time in their life. The condition can be severe and debilitating with symptoms such as delusions, hallucinations and the loss of concentration, motivation and social skills. But schizophrenia is not a degenerative or life-threatening condition and in recent years improved knowledge and understanding, psychological treatments and more tolerable medication have greatly increased people's ability to manage their symptoms and live a 'normal' life. This straightforward, accessible and inspiring guide provides information on: - The myths and misconceptions surrounding schizophrenia- The possible causes and how the illness is diagnosed- Medication and other treatment options; sources of support- Improving health and well-being- Employment - paid and voluntary- Complementary therapies - Counselling and psychotherapy The guide also includes the latest research findings and personal accounts of recovery by people with the diagnosis.

A powerful exposé of how political violence operates through the spaces of urban life. Cities are the new battleground of our increasingly urban world. From the slums of the global South to the wealthy financial centers of the West, *Cities Under Siege* traces the spread of political violence through the sites, spaces, infrastructure and symbols of the world's rapidly expanding metropolitan areas. Drawing on a wealth of original research, Stephen Graham shows how Western militaries and security forces now perceive all urban terrain as a conflict zone inhabited by lurking shadow enemies. Urban inhabitants have become targets that need to be continually tracked, scanned and controlled. Graham examines the transformation of Western armies into high-tech urban counter-insurgency forces. He looks at the militarization and surveillance of international borders, the use of 'security' concerns to suppress democratic dissent, and the enacting of legislation to suspend civilian law. In doing so, he reveals how the New Military Urbanism permeates the entire fabric of urban life, from subway and transport networks hardwired with high-tech 'command and control' systems to the insidious militarization of a popular culture corrupted by the all-pervasive discourse of 'terrorism.'

In the twenty-first century, we are continually confronted with the existential side of technology—the relationships between identity and the mechanizations that have become extensions of the self. Focusing on one of humanity's most ubiquitous machines, *Automotive Prosthetic: Technological Mediation and the Car in Conceptual Art* combines critical theory and new media theory to form the first philosophical analysis of the car within works of conceptual art. These works are broadly defined to encompass a wide range of creative expressions, particularly in car-based conceptual art by both older, established artists and younger, emerging artists, including Ed Ruscha, Martha Rosler, Richard Prince, Sylvie Fleury, Yael Bartana, Jeremy Deller, and Jonathan Schipper. At its core, the book offers an alternative formation of conceptual art understood according to technology, the body moving through space, and what art historian, curator, and artist Jack Burnham calls “relations.” This thought-provoking study illuminates the ways in which the automobile becomes a naturalized extension of the human body, incarnating new forms of “car art” and spurring a technological reframing of conceptual art. Steeped in a sophisticated take on the image and semiotics of the car, the chapters probe the politics of materialism as well as high/low debates about taste, culture, and art. The result is a highly innovative approach to contemporary intersections of art and technology.

Ireland's relationship with the European Union has been determined by the behaviour, actions and discourse of political parties. This book examines this impact through an in-depth analysis of the Europeanization of party politics in the Republic of Ireland and Northern Ireland. First, it presents original research on cross-cutting issues that have featured in political debates about European integration, including referendum campaigns on EU treaties, Irish neutrality and party policy positions on the EU. Secondly, it is the first book of its kind to examine in detail how each of the main parties on the island of Ireland has adapted to EU membership. In doing so it both tests the thesis of 'Europeanization' and deepens understanding of the impact that EU membership can have on national and sub-national party politics. What this study reveals is that, while Europeanization is clearly evident in all parties in Ireland, including those most critical of European integration, its influence has been strictly curtailed. We argue that the effects of Europeanization in Irish party politics have been limited by enduring resistance to – and conditions placed upon – EU influence in particular policy areas, the importance of pragmatism and (sub-)national priorities in shaping parties' approaches to European integration and the fact that engagement with the EU continues to be a predominantly elite-led process. This book was published as a special issue of *Irish Political Studies*.

From fundamental principles to advanced subspecialty procedures, this text is the go-to reference on the technical, scientific, and clinical challenges professionals face. Features new chapters, new authors, meticulous updates, an increased international presence, and a new full-color design.

Provide optimal anesthetic care to your young patients with *A Practice of Anesthesia in Infants and Children*, 5th Edition, by Drs. Charles J. Cote, Jerrold Lerman, and Brian J. Anderson. 110 experts representing 10 different countries on 6 continents bring you complete coverage of the safe, effective administration of general and regional anesthesia to infants and children - covering standard techniques as well as the very latest advances. Find authoritative answers on everything from preoperative evaluation through neonatal emergencies to the PACU. Get a free laminated pocket reference guide inside the book! Quickly review underlying scientific concepts and benefit from expert information on preoperative assessment and anesthesia management, postoperative care, emergencies, and special procedures. Stay on the cutting edge of management of emergence agitation, sleep-disordered breathing and postoperative vomiting; the use of new devices such as cuffed endotracheal tubes and new airway devices; and much more. Familiarize yourself with the full range of available new drugs, including those used for premedication and emergence from anesthesia. Benefit from numerous new figures and tables that facilitate easier retention of the material; new insights from neonatologists and neonatal pharmacologists; quick summaries of each chapter; and more than 1,000 illustrations that clarify key concepts. Access the entire text online, fully searchable, at [www.expertconsult.com](http://www.expertconsult.com), plus an extensive video library covering simulation, pediatric airway management, burn injuries, ultra-sound guided regional anesthesia, and much more; and new online-only sections, tables and figures.

The all-new Hummer H3 will reach market in early 2005, just as this book chronicling its development is published. The H3 will offer traditional Hummer off-road durability and stump-pulling power in a smaller, more-affordable SUV-styled package. Interest in the new model is very high and the automotive website "edmunds.com" reported, ". . . the smaller and cheaper H3 is likely to become the most popular Hummer ever."
