Automotive Detailing in Detail takes the combined experience and expertise of three leading detailing commentators to provide a thorough and expansive overview of automotive detailing techniques. From the pre-wash, wash and preparation stages, through machine polishing to paint protection and maintenance, every detailing stage is covered: surface types, contaminants and products are analysed, before the actual processes are laid bare. In the age of the internet and social media, a plethora of detailing knowledge is available online, yet it is strangely difficult to discover completely, or harness usefully. This book redresses the balance. Aimed at motoring enthusiasts, car mechanics, restorers, valets and those thinking of setting up a valeting/car detailing business and illustrated throughout with 268 colour photographs and 36 line artworks.

papers presented at ICEIS'2003. It also includes contributions by some of the invited speakers of the conferences. Audience: This book will be of interest to information technology professionals, especially those working in the fields of Systems integration, databases, decision support systems, agents and internet computing. It will also be of use to managers working with information systems and requiring knowledge of current trends in development methods and applications. This report provides detailed documentation on current trends and prospective developments in the use of thermoplastics and thermoplastic composites by the automotive industry.

The aim of this book is to link demand and supply of environmental information in the field of Life Cycle Management. The book is based on the results of the CHAINET concerted action financed by EU-DGXII for the work period 1998-2000, and is intended to build bridges between the different scientific communities in the field of Life Cycle Management. A structured approach is followed, meaning that both demand and supply of environmental information are characterised, after which the two are linked.

The thinking of John Maynard Keynes is still relevant to successful development of the advanced capitalistic system as is shown by evolution of economic thinking since World War II. The changes in economic thinking in the United States and in the world are described, with a chapter devoted to each presidency from Eisenhower to Clinton. The importance of Military Keynesianism in winning the Cold War is described along with similarities

and differences between the various national administrations.

This book contains a collection of twenty-one essays in honour of Professor Franco Montanari by eminent specialists on Homer, ancient Homeric scholarship, and the reception of the Homeric Epics in both ancient and modern times. It covers a wide range of important subjects, including neoanalysis and oral poetry, the Doloneia, the Homeric scholia, the theoretical premises of Aristarchean scholarship, and Homer in Sappho, Pindar, Comedy, Plato, and Hellenistic Poetry. As a whole, the contributions demonstrate the vitality of modern scholarship on Homeric poetry.

Electricity has shaped the modern world. But how has it affected our health and environment? Over the last 220 years, society has evolved a universal belief that electricity is 'safe' for humanity and the planet. Scientist and journalist Arthur Firstenberg disrupts this conviction by telling the story of electricity in a way it has never been told before--from an environmental point of view--by detailing the effects that this fundamental societal building block has had on our health and our planet. In *The Invisible Rainbow*, Firstenberg traces the history of electricity from the early eighteenth century to the present, making a compelling case that many environmental problems, as well as the major diseases of industrialized civilization--heart disease, diabetes,

Through ten editions, Fox and McDonald's Introduction to Fluid Mechanics has helped students understand the physical concepts, basic principles, and analysis methods of fluid mechanics. This market-leading textbook provides a balanced, systematic approach to mastering critical concepts with the proven Fox-McDonald solution methodology. In-depth yet accessible chapters present governing equations, clearly state assumptions, and relate mathematical results to corresponding physical behavior. Emphasis is placed on the use of control volumes to support a practical, theoretically-inclusive problem-solving approach to the subject. Each comprehensive chapter includes numerous, easy-to-follow examples that illustrate good solution technique and explain challenging points. A broad range of carefully selected topics describe how to apply the governing equations to various problems, and explain physical concepts to enable students to model real-world fluid flow situations. Topics include flow measurement, dimensional analysis and similitude, flow in pipes, ducts, and open channels, fluid machinery, and more. To enhance student learning, the book incorporates numerous pedagogical features including chapter summaries and learning objectives, end-of-chapter problems, useful equations, and design and open-ended problems that encourage students to apply

This revision of Bloom's taxonomy is designed to help teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives-cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis). This revisited framework allows you to connect learning in all areas of curriculum. Educators, or others interested in educational psychology or educational methods for grades K-12.
