In fictionally relating the stories of those around her -- Jean-Paul Sartre, Albert Camus, Arthur Koestler, Nelson Algren -- de Beauvoir dissects the emotional and philosophical currents of her time. At once an engrossing drama and an intriguing political tale, *The Mandarins* is the emotional odyssey of a woman torn between her inner desires and her public life. "Much more than a roman a clef . . . a moving and engrossing novel." -- New York Times

"The Rainbow" tells the story of three generations of the Brangwen family, a dynasty of farmers and craftsmen who live in the east Midlands of England, on the borders of Nottinghamshire and

Derbyshire. The book covers a period from the 1840s to 1905, and shows how the love relationships of the Brangwens change against the backdrop of the increasing industrialization of Britain. The first central character, Tom Brangwen, is a farmer whose experience of the world does not stretch beyond these two counties; while the last, Ursula, his granddaughter, studies at university and becomes a teacher in the progressively urbanized, capitalist and industrial world. "Women in Love" is a sequel to novel *The Rainbow*, and follows lives of the Brangwen sisters, Ursula a schoolteacher, and Gudrun a painter. They meet two men who live nearby, school inspector Rupert Birkin and Gerald Crich, heir to a coal-mine, and the four become friends. Ursula and Birkin begin a romantic friendship, while Gudrun and Gerald eventually begin a love affair. The emotional relationships thus established are given further depth and tension by an intense psychological and physical attraction between Gerald and Rupert. All four are deeply concerned with questions of society, politics, and the relationship between men and women. The novel ranges over the whole of British society before the time of the First World War and eventually concludes in the snows of the Tyrolean Alps.

Yayati, Girish Karnad's first play, was written in 1960 and won the Mysore State Award in 1962. It is based on an episode in the Mahabharata, where Yayati, one of the ancestors of the Pandavas, is given the curse of premature old age by his father-in-law, Shukracharya, who is incensed by Yayati's infidelity. Yayati could redeem this curse only if someone was willing to exchange his youth with him. It is his son, Pooru, who finally offers to do this for his father. The play examines the moment of crisis that Pooru's decision sparks, and the dilemma it presents for Yayati, Pooru, and Pooru's young wife.

This study presents 13 articles interrogating themes likely to impinge on India's 15th general elections in 2009. These were written following intense discussion between the contributors and use available data as well as original data and analysis. The significance of the analyses goes beyond how much these questions find place in the campaign, or how much they would impact the electoral results. These have and would continue to be essential themes in Indian politics for some time. They would influence the country's politics, its leaders, parties and institutions and would be interrogated in political, policy and social science circles in the foreseeable future. They would in turn be impacted, redefined and perhaps transformed by political dynamics and social pressure. The first attempt of its kind to analyse the impact of certain emerging trends in politics on upcoming elections anywhere in the world, this book will be a useful addition to election studies and policy making in general.

Facing Mount Kenya, first published in 1938, is a monograph on the life and customs of the Gikuyu people of central Kenya prior to their contact with Europeans. It is unique in anthropological literature for it gives an account of the social institutions and religious rites of an African people, permeated by the emotions that give to customs and observances their meaning. It is characterised by both insight and a tinge of romanticism. The author, proud of his African blood and ways of thought, takes the reader through a thorough and clear picture of Gikuyu life and customs, painting an almost utopian picture of their social norms and the sophisticated codes by which all aspects of the society were governed. This book is one of a kind, capturing and documenting traditions fast disappearing. It is therefore a must-read for all who want to learn about African culture.

Bioadhesion is often defined as the state in which two materials, at least one of which is biological in nature, are held together for extended periods of time by interfacial forces. It is an area of active multidisciplinary research, where engineers, scientists—including chemists, physicists, biologists, and medical experts—materials' producers, and manufacturers combine their knowledge. From the practical point of view, bioadhesive systems have been used for several years for medical applications such as dentistry and orthopedics and are now entering new fields, for example, tissue sealing and directed drug delivery systems. Understanding bioadhesion mechanisms is of prime importance while exploring desired adhesion for bioadhesion applications such as sealants as well as successful prevention of undesired adhesion of biomolecules, cells, or organisms. Controlling the occurrence of bioadhesion events is also an important problem in the design and use of medical devices, biosensors, membranes, ships, and oil rigs. This book provides a comprehensive view of bioadhesion and highlights different aspects of this phenomenon. The first section of the book presents fundamentals aspects of bioadhesion. It also summarizes various direct and indirect methods used to investigate and characterize bioadhesion. The second section describes studies of natural adhesives. These include "wet" adhesives that are produced and secreted by sessile marine organisms such as mussels and sand tubes and "dry" adhesives such as the one characterizing the gecko foot. The third section focuses on biomimetic adhesives. These man-made materials are fabricated on the basis of the lessons learned from nature emphasizing the correlation between nature understanding and biomimetics. Finally, the last section reviews medical applications of adhesive materials, which include surgical sealants, mucoadhesive drug delivery vehicles, and prevention of adhesion on medical devices.

The human face of poverty The poor in India are, too often, reduced to statistics. In the dry language of development reports and economic projections, the true misery of the 312 million who live below the poverty line, or the 26 million displaced by various projects, or the 13 million who suffer from tuberculosis gets overlooked. In this thoroughly researched study of the poorest of the poor, we get to see how they manage, what sustains them, and the efforts, often ludicrous, to do something for them. The people who figure in this book typify the lives and aspirations of a large section of Indian society, and their stories present us with the true face of development.
