This is the first complete edited volume devoted to providing comprehensive and state-of-the-art descriptions of science principles and pilot- and field-scaled engineering applications of nanoscale zerovalent iron particles (NZVI) for soil and groundwater remediation. Although several books on environmental nanotechnology contain chapters of NZVI for environmental remediation (Wiesner and Bottero (2007); Geiger and Carvalho-Knighton (2009); Diallo et al. (2009); Ram et al. (2011)), none of them include a comprehensive treatment of the fundamental and applied aspects of NZVI applications. Most devote a chapter or two discussing a contemporary aspect of NZVI. In addition, environmental nanotechnology has a broad audience including environmental engineers and scientists, geochemists, material scientists, physicists, chemists, biologists, ecologists and toxicologists. None of the current books contain enough background material for such multidisciplinary readers, making it difficult for a graduate student or even an experienced researcher or environmental remediation practitioner new to nanotechnology to catch up with the massive, undigested literature. This prohibits the reader from gaining a complete understanding of NZVI science and technology. In this volume, the sixteen chapters are based on more than two decades of laboratory research and development and field-scaled demonstrations of NZVI implementation. The authors of each chapter are leading researchers and/or practitioners in NZVI technology. This book aims to be an important resource for all levels of audiences, i.e. graduate students, experienced environmental and nanotechnology researchers, and practitioners evaluating environmental remediation, as it is designed to involve everything from basic to advanced concepts.

This is an important call for open discussion and debate as a way for architectural education to escape its current malaise. Written by Austin Williams, director of the Future Cities Project and editor of the series of essays from which his own work is taken, it places the current politicisation of teaching in a longer, more profound history of learning.

We are entering a time when education and hard work will no longer guarantee success for huge numbers of people. Humanity faces many threats, including the potential of future digital dictatorships pushing us into irrelevance. As employers adapt artificial intelligence, blue and white-collar jobs alike will evaporate. We must learn how to take advantage of technology now instead of being enslaved by it. The Corona Virus pandemic has been a wakeup call for everyone that cannot earn an income amidst the lockdown. How will you pay your rent, feed your family and survive? This book flips the script and attempts to give the individual the advantage by understanding life and creating meaning, by feeling, by thinking, by desiring, and by inventing. We cannot depend on the educational system to secure our future, it is our responsibility to self-educate and think critically. According to Jim Rohn, "formal education will make you a living; self-education will make you a fortune." If you find yourself among the unhappy, stuck in traffic and depressed, profoundly disillusioned with your own past choices; pay close attention. I go deep into the fallacies that surround our daily beliefs. I wrote the book I wish I had in my hands twenty years ago. It applies to college students starting out and to those stuck in a "barcode" job. You'll learn how to:--Leverage your skills and turn it into a profit--Feel excited about working on a freedom project that matters to you not others--Create plans that will allow you more time in the endeavors that matter to you--Escape the prison of working for someone else--Learn why getting paid while you sleep can turn your life around--Treat your body better so that you can live a healthier life--Help build a life that you will not regret If you find yourself in a dark place filled with chaos, "Live Free or Die Hard", will shine a light on the path to freedom and success.
