An unflinching memoir from a writer reckoning with his relationship with his troubled father and the complicated legacy that each generation hands down to the next “Justin Taylor’s relentless, peripatetic, and tender search for reconciliation with his late troubled father blooms into a full-throated song of joy about his own life lived through music, teaching, travel, and literature.”—Lauren Groff, author of Florida NAMED ONE OF THE BEST BOOKS OF THE YEAR BY KIRKUS REVIEWS When Justin Taylor was thirty, his father, Larry, drove to the top of the Nashville airport parking garage to take his own life.

Thanks to the intervention of family members, he was not successful, but the incident forever transformed how Taylor thinks of his father, and how he thinks of himself as a son. Moving back and forth in time from that day, *Riding with the Ghost* captures the past’s power to shape, strengthen, and distort our visions of ourselves and one another. We see Larry as the middle child in a chilly Long Island family; as a beloved Little League coach who listens to kids with patience and curiosity; as an unemployed father struggling to keep his marriage together while battling long-term illness and depression. At the same time, Taylor explores how the work of confronting a family member’s story forces a reckoning with your own. We see Taylor as a teacher, modeling himself after his dad’s best qualities; as a caregiver, attempting to provide his father with emotional and financial support, but not always succeeding; as a new husband, with a dawning awareness of his own depressive tendencies. With raw intimacy, *Riding with the Ghost* lays bare the joys and burdens of loving a troubled family member. It’s a memoir about fathers and sons, teachers and students, faith and illness, and the pieces of our loved ones that we carry with us always.

The author buys a long-dead vintage BMW sight-unseen, travels a thousand miles to where it sits, gets it running, and drives it home. During the twelve-day trip, he finds that what began as a story of man-versus-machine turns into something else entirely--a story of the kindness of strangers, and how doors sometimes open exactly when you need them to. "Rob Siegel is a writer with the mind of a mechanic and a mechanic with the mind of a writer. He's also an old-school romantic of the best kind, and one of the few people who understands what car culture really means to the people invested in it-free of stereotype, cliché, or pat sentiments you've read a thousand times before. Like all of his writing, *Ran When Parked* focuses heavily on the why behind the hobby. It's a mix of casual, long-form blog entry; detailed how-to; and emotive confessional; most of all, he seems to believe the world would be a better place if everyone else followed on his crazy path and devoted their free time to resurrecting old iron. He's right." -Sam Smith Editor at Large, *Road & Track*

This book covers the history of the 5 series midsize sedan and the related X5 SUV from September 1972 to the e60's major makeover for 2008 and the development of the e70 X5. Specific mechanical, electronic and cosmetic changes are described, including the time of and reasons for their introduction. Several aspects of BMW's corporate history and technically related models such as the 6-series are also described, as are aftermarket modifications by Alpina, Hartge, and other specialist BMW tuners and speed shops. The paper investigates the divergence between inflation and monetary expansion in Zimbabwe since late 2003. The substantial decline in velocity and increasing levels of real money balances

during 2004 are at odds with a record of inflation closely tracking the growth rates of monetary aggregates in the past. Possible explanations for the divergence include an unstable demand for money, a sudden shift in the underlying demand for real balances due to a sharp change in an explanatory variable, and a structural break or aberration in a normally stable money demand relation reflecting some unexplained factor such as repressed inflation (given administered prices) or measurement errors in the consumer price index. The results of the study point to the last possibility as the most likely explanation.
