For the first time in one volume, Phil Edmonston, Canada's automotive "Dr. Phil," covers all used vehicles, packing this guide with insider tips to help the consumer make the safest and cheapest choice possible from cars and trucks of the past 25 years.

Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever.

One of the seventeen critical infrastructures vital to the security of the United States, the water supply system remains largely unprotected from the threat of terrorism,

including possible revenge by Al Qaeda over the killing of Osama Bin Laden. Recognizing and identifying prospective events of terrorism against the water infrastructure is critical to the protection of the nation, as the consequences triggered by a terrorist attack on the water supply would be devastating. Risk Assessment for Water Infrastructure: Safety and Security provides a unique quantitative risk assessment methodology for protection and security against terrorist contamination, vandalism, attacks against dams, and other threats to water supply systems. Focusing on the human safety, environmental, and economic consequences triggered by potential terrorist attacks and other threats, the book presents: The development of an integrated approach of risk assessment based upon the cumulative prospect theory The qualitative/quantitative processes and models for security and safe facility operations as required by EPA, DHS, and other governmental and regulatory agencies The application of an integrated model to the risk assessment of surface water, dams, wells, wastewater treatment facilities, reservoirs, and aqueducts of large urban regions The development of intelligence analysis incorporating risk assessment for terrorism prevention Finally, the book presents the legal and regulatory requirements and policy related to the protection and security of water infrastructure from terrorism and natural hazards to both human health and the environment. By analyzing potential terrorist risks against the water supply, strategic improvements in U.S. water infrastructure security may be achieved, including changes in policy, incorporation of intrusion detection

There are many books on the market that discuss the Toyota Production System but few that insightfully analyze its marketing strategy. Authored by former Toyota marketing executives, this is the first book of its kind to detail how Toyota's thinking habits go beyond the shop floor and influence and guide Toyota's marketing function. Toyota has expanded from a venture enterprise to one of the biggest global enterprises because of its innovative mindset (Toyota thinking habits) using Breakthrough Thinking, which supports a new philosophical approach to problem solving, turning 180 degrees away from conventional thinking. Written by Toyota's former executive managing director and founder of Breakthrough Thinking, Toyota's Global

Canada's automotive "Dr. Phil" says there's never been a better time to buy a new car or truck. For deals on wheels, 2013 will be a "perfect storm." There's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar, a worldwide recession driving prices downward, and a more competitive Japanese auto industry that's still reeling from a series of natural disasters. In addition to lower prices and more choices, 2013 car buyers will see more generous cash rebates, low financing rates, bargain leases, and free auto maintenance programs. Buy, sell, or hold? Which cars and trucks are "wallet-friendly" and can easily last 15 years? Which vehicles offer the most features to best accommodate senior drivers? The automobile is an icon of modern technology because it includes most aspects of modern engineering, and it offers an exciting approach to engineering education. Of course there are many existing books on introductory fluid/aero dynamics but the majority of these are too long, focussed on aerospace and don't adequately cover the basics. Therefore, there is room and a need for a concise, introductory textbook in this area. Automotive Aerodynamics fulfils this need and is an introductory textbook intended as a first course in the complex field of aero/fluid mechanics for engineering students. It introduces basic concepts and fluid properties, and covers fluid dynamic equations. Examples of automotive aerodynamics are included and the principles of computational fluid dynamics are introduced. This text also includes topics such as aeroacoustics and heat transfer which are important to engineering students and are closely related to the main topic of aero/fluid mechanics. This textbook contains complex mathematics, which not only serve as the foundation for future studies but also provide a road map for the present text. As the chapters evolve, focus is placed on more applicable examples, which can be solved in class using elementary algebra. The approach taken is designed to make the mathematics more approachable and easier to understand. Key features: Concise textbook which provides an introduction to fluid mechanics and aerodynamics, with automotive applications Written by a leading author in the field who has experience working with motor sports teams in industry Explains basic concepts and equations before

2,500 years ago, the Chinese sage, Confucius, observed that all governments follow a cycle: from unity, through prosperity to stagnation, then to collapse and anarchy. He taught that when government officials sought personal power or wealth instead of taking care of the people, society lost the “Mandate of Heaven” and fell apart. By “Mandate of Heaven,” Confucius meant that God Himself had directed how society should work. Chinese history shows 15 or 20 collapses when government lost virtue and the country broke apart in civil war, but whenever the Chinese followed Confucius’ rules, Chinese society worked well. From his day to ours, civilizations all over the world have followed the same cycle Confucius observed. Today’s United States is well into the “stagnation” phase and many observers predict a collapse. But America has an advantage Confucius never imagined. Unlike the Chinese, America’s voters have the power to replace their rulers and reform their government without armed revolution. The Taylors’ wide-ranging tour through history, culture, and modern news sheds new light on how the past both predicts the future and can be used to alter it for the better. In *The Morning Echo*, author Javed Naseer explores a plethora of subjects revolving around nature and science and the role they play in life. Collected from his life experiences from his early childhood after leaving India for New Orleans to adulthood, the essays are based on experiments and speculation as well as

mathematics, derivation, and extrapolation. These essays share insights on a wide array of topics, discussing how India emerged as a free democratic republic after dethroning British from positions of authority in the Indian subcontinent; presenting a brief introduction to a ruling democratic government and its methods of implementing justice; and describing the Apollo 11 mission to the moon and the first man, Neil A. Armstrong, on the moon. Naseer also delves into the issues involving the ever-growing world population and the pollution crisis that plagues our planet; brings to light one of the cheapest resources of energy, hydropower; lists the top ten universities of the world; and reviews Einsteins Special Relativity and Newtons Laws of Motion Covering widely diverse subjects, The Morning Echo communicates valuable insight as to the nature of human life, the world around us, and how we must act in order to survive the calamities and the brutalities of time.

Rethinking Children and Research considers the way people approach research into childhood and children's lives and examines the debates concerning the forms and goals of such research. Theoretical and practice-based perspectives are discussed in the context of recent key developments in research theory and philosophy of children. Mary Kellett promotes the idea that researchers should listen to the voices and perspectives of children as experts on their own lives, and offers insights and guidance on approaches to research design, implementation and presentation. Recent debates and developments are considered, including ethics, approaching research with children from a child-rights framework, and rethinking the power dynamic within research relationships with children. Rethinking Children and Research is essential for studying childhood and undergraduate or postgraduate level, and will be of interest to all involved with research into childhood and children's lives in the areas of

Franklin, Jack, Marla, Thadius, and Caitlin... this unlikely group of assorted misfits are the Cemeterians, a group that will take on any job - no, really, we mean any bloody job (money's a bit tight right now)! Trudge through disgusting sewers to battle manatee-massacring mermaids and soggy cultists, creep through creepy, fog-littered cemeteries straight out of an ancient Hammer Film soundstage, confront undead lecherous lodgers and other assorted beasts, creepies, and ghoulies. It all comes down to whether an adolescent giant Automaton, a truly mad, Mad Scientist, a surly Necromancer, a Banshee's granddaughter, and a reluctant furry monster straight from under your little sister's bed can manage not to kill each other - or, at least, quit fighting over the tele-privilege-schedule long enough to get the job done! Not likely.

After six years of research, six case studies, and more than 220 interviews with Toyota employees, distributors, and dealers across the globe, the authors provide fascinating insights on the inner workings of the Toyota company and why it is so successful.

He was a perfect man living a perfect life...which made him a perfect killer. Canadian Air Force Colonel Russell Williams commanded the largest Canadian Forces base in the country. He had personally piloted prime ministers, dignitaries, and members of the British royal family, and was one of the most respected and trusted soldiers in the military. He was also a rapist and a murderer. This is the disturbing true account of how one of Canada's highest-ranking military officers became one of Canada's most notorious criminals, including his ultimate capture, trial and conviction for a twisted spree of sexual deviancy and two brutal rapes and murders.
