The story of the American Quilt Trail, featuring the colorful patterns of quilt squares painted large on barns throughout North America, is the story of one of the fastest-growing grassroots public arts movements in the United States and Canada. In *Barn Quilts and the American Quilt Trail Movement* Suzi Parron takes us to twenty-five states as well as Canada to visit the people and places that have put this movement on America's tourist and folk art map. Through dozens of interviews with barn quilt artists, committee members, and barn owners, Parron documents a journey that began in 2001 with the founder of the movement, Donna Sue Groves. Groves's desire to honor her mother with a quilt square painted on their barn became a group effort that eventually grew into a county-wide project. Today, quilt squares form a long imaginary clothesline, appearing on more than three thousand barns scattered along one hundred and twenty driving trails. With more than eighty full-color photographs, Parron documents here a movement that combines rural economic development with an American folk art phenomenon.

Forget step-by-step instructions and copycat designs. In *The Improv Handbook for Modern*

Quilters, Sherri Lynn Wood presents a flexible approach to quilting that breaks free of old paradigms. Instead of traditional instructions, she presents 10 frameworks (or scores) that create a guiding, but not limiting, structure. To help quilters gain confidence, Wood also offers detailed lessons for stitching techniques key to improvisation, design and spontaneity exercises, and lessons on color. Every quilt made from one of Wood's scores will have common threads, but each one will look different because it reflects the maker's unique interpretation. Featured throughout the book are Wood's own quilts and a gallery of contributor works chosen from among the hundreds submitted when she invited volunteers to test her scores during the making of this groundbreaking work.

Fabric-cast concrete involves casting concrete in forms made with flexible formwork. This provides the potential to produce forms that are both structurally efficient and architecturally exciting in a relatively inexpensive and practical manner. By careful shaping of the fabric it is possible to produce complex shapes that would otherwise be difficult and expensive to produce using conventional formwork systems. This book contains six essays that describe the collaboration between the Universities of Edinburgh and East London, together with the Centre for Architectural and Structural Technology (CAST) at the University of Manitoba, in their

detailed and practical research into concrete casting and formwork. Richly illustrated with photographs and diagrams and containing new and innovative research this book offers the architect, engineer and student inspiration and technical guidance in this re-emerging material.
