Unintended Consequences of Electronic Medical Records: An Emergency Room Ethnography argues that while electronic medical records (EMRs) were supposed to improve health care delivery, EMRs' unintended consequences have affected emergency medicine providers and patients in alarming ways. Higher healthcare costs, decreased physician productivity, increased provider burnout, lower levels of patient satisfaction, and more medical mistakes are just a few of the consequences Barbara Cook Overton observes while studying one emergency room's EMR adoption. With data collected over six years, Overton demonstrates how EMRs harm health care organizations and thrust providers into the midst of incompatible rule systems without appropriate strategies for coping with these challenges, thus robbing them of agency. Using structuration theory and its derivatives to frame her analysis, Overton explores the ways providers communicatively and performatively receive and manage EMRs in emergency rooms. Scholars of communication and medicine will find this book particularly useful.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

One CD-ROM disc in pocket.

A guide to preparing for the LPN/LVN pre-entrance nursing exam, featuring subject reviews, over one thousand practice questions and three practice exams with answers, test-taking tips, and a companion CD.

Research shows that the sharing of personal, first-hand stories not only enhances learning and eases the transition to a new role, but also helps novice educators to understand that their challenges are shared by others. With the goal of improving the experience of nurses transitioning from clinician to educator, in hospitals as well as schools of nursing, this unique book presents the stories of nurses who made this transition. It presents the findings of several qualitative studies addressing the question, "What is the lived experience of clinicians as they assume new roles as clinical nurse educators?" These narratives describe the challenges they faced and transformations in each nurse's identity and relationships during the transition process. The text includes recommendations from the Carnegie Foundation for the Advancement of Teaching and specific problem-solving strategies that have worked for others. The narratives are from nurse clinicians, nurse educators, and students who provide insights into such common dilemmas faced by novice

educators as "How do I keep a patient safe while allowing the student nurse to practice a skill for the first time?" "If a student is slow to catch on to a procedure, how long do I wait before they fail?" "How do I help provide a safe and effective learning environment for new graduate nurses?" The book includes stories of students who describe caring and uncaring experiences with clinical nurse educators. Stories address cultural diversity, bullying, and dilemmas related to critical and ethical thinking. Nurse educators themselves share insights into what they wish they had done differently to guide students and new graduate nurses in their learning. While these storytellers had diverse clinical and educational backgrounds, there were consistent similarities between the experiences they described. One common thread was the need to embrace the role of a novice in order to succeed. The book will serve as a valuable text for graduate students in nurse educator courses as well as students and nurses seeking support, insight, and inspiration in their transition to the clinical nurse educator role. Key Features: Presents experiential narratives from nurses who made the transition from clinician to educator Describes important aspects of a nurse's transition from the role of clinical expert to that of novice educator Includes research-based insights in a highly accessible style and format Integrates National League for Nursing Core Competencies into the text Provides inspiring, helpful, and comforting guidance for nurse clinicians feeling lost or confused in a new role

A comprehensive reference to today's academic programs provides in-depth descriptions of more than 1,100 majors while listing 3,800 colleges that offer profiled undergraduate and graduate degrees, sharing additional insights into how specific majors can translate into careers. Original.

Since the publication of the Institute of Medicine (IOM) report *Clinical Practice Guidelines We Can Trust* in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.
