The positional grid is like a cognitive road map for players when in possession. Depending on where the ball is located, players are responsible to fill a specific a location in the positional grid. The end result is that a team shape or structure will develop in possession, resulting in a positional soccer style of play. However, the game of soccer has unlimited ever changing situations and variables, so there will always be freedom within the provided positional structure to make adaptations. The positional soccer grid divides the training pitch into 20 sections, basically five vertical rows and four cross-field sections. The widest channels are referred to as the low option areas, because there are limited passing opportunities that can made from out wide. The widest areas are utilized often to draw the defense out, moving them from side to side to open up spaced in between the defenders or on the far side. The next space that borders the wide channel is called a "half space". The half space is a dangerous area because penetrating balls and shots on goal can be taken from this position. Guardiola often liked his most dangerous players like Robben or Messi to receive the ball in the half spaces. How many goals have we seen those two players create by cutting inside and shooting to the far post! The next space is the large space on top of the 18-yard box, this space is considered the most dangerous area on the soccer field. This large box is so dangerous because more goals are created from this area than anywhere else. However, quick 1-touch play is critical in this area to be effective, with the largest concentration of defenders located in this space. Of course players like Messi are invaluable in areas like this, as they can make the impossible happen, changing the game. The positional grid offers a structure and provides cues for players, letting them know to adjust their position depending in which zone the ball is in, they must know when to fill an empty zone when it has been vacated, or to move into a zone to create superiority of numbers. A general rule of thumb is that no more than three players will be in a horizontal line, and not more than two in a vertical line, this helps give the player on the ball two-three passing options. The entire game can be taught using the grid, from build-up play to the attacking third. When using the grid to teach positional soccer there are many ways to utilize it. One way is to set-up trainings that require players to operate inside the positional grid, adhering to specific conditions, but still allowing a degree tactical freedom while encouraging problem solving. An example of this would be requiring five shorter passes on one side of the field before a long pass can be made, switching the field to the far wide player. The next type of training can use the grid as more of specific road map that must be strictly adhered to. An example of this would be working on playing the ball out of the back. Each player will be assigned a specific part of the grid to be in, as a standard way of operating out of the back is established. The other beneficial aspect of using the positional grid is that it organizes space on the field in a realistic way for players. When players train tactics in specific game realistic spaces, their soccer awareness, tactical sense and soccer IQ benefit. Training in the positional grid helps players better judge distance, space and time in relationship to carrying out the desired tactics. I recommend training with the grid and then removing the grid at the end, so that spatial relationship is further reinforced.

In this inspirational yet practical book, the man Parade called "the most important coach in America," subject of the national bestseller *Season of Life*, Joe Ehrmann, describes his coaching philosophy and explains how sports can transform lives at every level of play, from the earliest years to professional sports. Coaches have a tremendous platform, says Joe Ehrmann, a former Syracuse University All-American and NFL star. Perhaps second only to parents, coaches can impact young people as no one else can. But most coaches fail to do the teaching, mentoring, even life-saving intervention that their platform provides. Too many are transactional coaches; they focus solely on winning and meeting their personal needs. Some coaches, however, use their platform. They teach the Xs and Os, but also teach the Ys of life. They help young people grow into responsible adults; they leave a lasting legacy. These are the transformational coaches. These coaches change lives, and they also change society by helping to develop healthy men and women. *InSideOut Coaching* explains how to become a transformational coach. Coaches first have to "go inside" and articulate their reasons for coaching. Only those who have taken the *InSideOut* journey can become transformational. Joe Ehrmann provides examples of coaches in his life who took this journey and taught him how to find something bigger than himself in sports. He describes his own *InSideOut* experience, starting with the death of his beloved brother, which helped him understand how sports could transcend the playing field. He gives coaches the information and the tools they need to become transformational. Joe Ehrmann has taken his message about the extraordinary power of sports all over the country. It has been warmly endorsed by NFL head coaches, athletic directors at major universities, high school head coaches, even business groups and community organizations. Now any parent-coach or school or community coach can read Ehrmann's message and learn how to make sports a life-changing experience.

A former NFL ref and acclaimed rules expert shares his insights and thoughts on the rules of the sport Only recently in the world of NFL media have "rules experts" become an essential part of a fan's viewing experience. As the league continues to implement rule changes that have more and more of an impact on games and, sometimes, the final outcome, it's become imperative that fans understand the rules and how they're applied. But often, they need help. Mike Pereira, hired by Fox Sports in 2010 as the rules expert for both the NFL and college football, was not only the first to rise to prominence in the role, but he is consistently lauded as being the best by his peers and even rival media networks. Viewers have come to rely on Pereira, the former vice president of NFL officiating, to provide entertaining, informative, and reliable explanations of the league's often baffling and controversial rulings during games. Now, Pereira digs a little deeper and gives NFL fans and casual viewers alike insight into NFL rules, their applications, and some of the most controversial calls in recent memory, in terms both can understand. In this book, Pereira draws on professional experience and his personal life, both his years of work at the pinnacle of the officiating world and his upbringing as the child of longtime official, Al Pereira.

Young children and even infants work hard at mastering various skills and show spontaneous pleasure at their own accomplishment. John Nicholls explores the conditions that cause students to lose their unselfconscious involvement in a game or task and become concerned with how they are stacking up against others. Charting the development of children's concepts of luck, effort, and ability, he argues that with age they are increasingly prone to take superiority over others as the definition of success. An emphasis on interpersonal competition, which permeates Western society, exacerbates this egotistical tendency and results in diminished accomplishment and alienation from school. To overcome these problems, Nicholls argues, we must "become as little children" for whom absorption in exploration and accomplishment come naturally, even when those around them are more competent. This ideal is unlikely to be promoted through technical approaches to education, or by the current emphasis on the role of education in economic development. Instead, Nicholls calls for a progressive approach to education. Difficult though it is to implement, this approach is most likely to increase equality of motivation for intellectual development, substantial accomplishment, satisfaction in work, and more productive relations with others. These are important ideas for anyone interested in achievement motivation, for those professionally involved in education, and for nonspecialists interested in, or worried about, how we educate our children.

Suitable for physicians, nurses, and athletic trainers dealing with sports programmes for children of all ages. Subjects such as weight control, nutrition, rehabilitation, and fractures and dislocations are covered.
