This book is open access under a CC BY 4.0 license. This volume describes and explains the educational method of Case-Based Clinical Reasoning (CBCR) used successfully in medical schools to prepare students to think like doctors before they enter the clinical arena and become engaged in patient care. Although this approach poses the paradoxical problem of a lack of clinical experience that is so essential for building proficiency in clinical reasoning, CBCR is built on the

premise that solving clinical problems involves the ability to reason about disease processes. This requires knowledge of anatomy and the working and pathology of organ systems, as well as the ability to regard patient problems as patterns and compare them with instances of illness scripts of patients the clinician has seen in the past and stored in memory. CBCR stimulates the development of early, rudimentary illness scripts through elaboration and systematic discussion of the courses of action from the initial presentation of the patient to the final steps of clinical management. The book combines general backgrounds of clinical reasoning education and assessment with a detailed elaboration of the CBCR method for application in any medical curriculum, either as a mandatory or as an elective course. It consists of three parts: a general introduction to clinical reasoning education, application of the CBCR method, and cases that can be used by educators to try out this method.

In this multi-faceted case study of one progressive institution of adult higher education, the editors and contributors to the volume lay out significant challenges confronting not just non-

traditional post-secondary colleges and universities but all institutions of higher education in today's rapidly changing context. Contending that nontraditional institutions are especially challenged in these turbulent times, they argue that these organizations' distinctive academic programs are among the most threatened in the landscape of higher education today. The 19 essays that make up this volume highlight and examine key creative tensions, rich interplays of emphases and values in higher education, in order to illuminate and address more intentionally the questions that we must address: Can we make constructive use of these tensions? Can we recognize what is at stake? And can we chart a course that will both respond innovatively to rapid change and sustain a vision and the purposes and principles on which that vision rests? Taken as a whole, this volume sheds light on the questions and creative tensions that can, with thoughtful attention, help to keep an alternative, progressive vision of adult higher education alive.
