What do you call that little glimmer of hope you see throughout life? We all catch sight of it from time to time. Sometimes we see it in ourselves. Sometimes we see it in others. And every so often we see it through some experience or revelation that we ourselves have. I chose to call that glimmer of hope a spark of light. In *A Spark of Light*, you will find an assortment of fictional stories, personal essays, creative nonfiction, and academic papers as Zachariah Wilhelm showcases a masterful knowledge of English and writing. And all throughout, a common thread runs across the pages—that little spark of light.

In 1969, the campus tumult that defined the Sixties reached a flash point at the University of Illinois. Out-of-town radicals preached armed revolution. Students took to the streets and fought police and National Guardsmen. Firebombs were planted in lecture halls while explosions rocked a federal building on one side of town and a recruiting office on the other. Across the state, the powers-that-be expressed shock that such events could take place at Illinois's esteemed, conservative, flagship university--how could it happen here, of all places? Positioning the events in the context of their time, Michael V. Metz delves into the lives and actions of activists at the center of the drama. A participant himself, Metz draws on interviews, archives, and newspaper records to show a movement born in demands for free speech, inspired by a movement for civil rights, and driven to the edge by a seemingly never-ending war. If the sudden burst of irrational violence baffled parents, administrators, and legislators, it seemed inevitable to students after years of official intransigence and disregard. Metz portrays campus protesters not as angry, militant extremists but as youthful citizens deeply engaged with grave moral issues, embodying the idealism, naiveté, and courage of a minority of a generation. This book features the proceedings of the Fifth International Conference on Computational Science and Technology 2018 (ICCST2018), held in Kota Kinabalu, Malaysia, on 29–30 August 2018. Of interest to practitioners and researchers, it presents exciting advances in computational techniques and solutions in this area. It also identifies emerging issues to help shape future research directions and enable industrial users to apply cutting-edge, large-scale and high-performance computational methods.

The #1 Easy, Common-Sense Guide to SQL Queries—Updated with More Advanced Techniques and Solutions Foreword by Keith W. Hare, Vice Chair, USA SQL Standards Committee SQL Queries for Mere Mortals has earned worldwide praise as the clearest, simplest tutorial on writing effective queries with the latest SQL standards and database applications. Now, author John L. Viescas has updated this hands-on classic with even more advanced and valuable techniques. Step by step, Viescas guides you through creating reliable queries for virtually any current SQL-based database. He demystifies all aspects of SQL query writing, from simple data selection and filtering to joining multiple tables and modifying sets of data. Building on the basics, Viescas shows how to solve challenging real-world problems, including applying multiple complex conditions on one table, performing sophisticated logical evaluations, and using unlinked tables to think “outside the box.” In two brand-new chapters, you learn how to perform complex calculations on groups for sophisticated reporting, and how to partition data into windows for more flexible aggregation. Practice all you want with downloadable sample databases for today’s versions of Microsoft Office Access, Microsoft SQL Server, and the open source MySQL and PostgreSQL databases. Whether you’re a DBA, developer, user, or student, there’s no better way to master SQL. Coverage includes: Getting started: understanding what relational databases are, and ensuring that your database structures are sound SQL basics: using SELECT statements, creating expressions, sorting information with ORDER BY, and filtering data using WHERE Summarizing and grouping data with GROUP BY and HAVING clauses Drawing data from multiple tables: using INNER JOIN, OUTER JOIN, and UNION operators, and working with subqueries Modifying data sets with UPDATE, INSERT, and DELETE statements Advanced queries: complex NOT and AND, conditions, if-then-else using CASE, unlinked tables, driver tables, and more NEW! Using advanced GROUP BY keywords to create subtotals, roll-ups, and more NEW! Applying window functions to answer more sophisticated questions, and gain deeper insight into your data Software-Independent Approach! If you work with database software such as Access, MS SQL Server, Oracle, DB2, MySQL, Ingres, or any other SQL-based program, this book could save you hours of time and aggravation—before you write a single query!
