In the past decades, lightweight building construction methods and the use of manmade materials in construction and furnishings have become more and more common. The time until structural failure can be expected in a fire has been reduced, and firefighters have seen hotter fires that generate high levels of deadly gasses. But the ventilation methods used by modern firefighters have not kept pace.

Positive pressure was first used in the fire service to ventilate a structure after the fire was knocked down.

Authors Kriss Garcia and Reinhard Kauffmann have taken positive pressure a step further to achieve effective ventilation in coordination with aggressive fire attack, called positive pressure attack (PPA).

Properly used PPA allows firefighters great control over the interior environment of a fire building, and starts at the earliest stages of the operation when ventilation can provide the greatest benefit for victims, firefighters, and the structure. With a small investment in equipment and a commitment to training, any fire department can implement PPA at the company level. Subjects covered in this book include:

- Basics of positive pressure and how to maximize its effectiveness for fireground ventilation.
- PPA: how effective ventilation can be coordinated to support an aggressive fire attack.

Characterizing Germany as a special locus of literary translation and reception, Fontane contests a prejudice which has since become a significant problem for nineteenth-century German studies, namely the frequent assessment of the epoch as narrowly national. The present collection of essays by thirteen eminent literary scholars and historians is intended to correct this prejudice: it demonstrates that literary life and production in the nineteenth century were governed by complex networks of intercultural exchange, influence and translation, and it does justice to this complexity through its range of complementary critical approaches, focussing on
