

23 Displacement Consequences In The Postcolonial Literature

Environmental migration is not new. Nevertheless, the events and processes accompanying global climate change threaten to increase human movement both within states and across international borders. The Inter-governmental Panel on Climate Change has predicted an increased frequency and severity of climate events such as storms, cyclones and hurricanes, as well as longer-term sea level rise and desertification, which will impact upon people's ability to survive in certain parts of the world. This book brings together a variety of disciplinary perspectives on the phenomenon of climate-induced displacement. With chapters by leading scholars in their field, it collects in one place a rigorous, holistic analysis of the phenomenon, which can better inform academic understanding and policy development alike. Governments have not been prepared to take a leading role in developing responses to the issue, in large part due to the absence of strong theoretical frameworks from which sound policy can be constructed. The specialist expertise of the authors in this book means that each chapter identifies key issues that need to be considered in shaping domestic, regional and international responses, including the complex causes of movement, the conceptualisation of migration responses to climate change, the terminology that should be used to describe those who move, and attitudes to migration that may affect decisions to stay or leave. The book will help to facilitate the creation of principled, research-based responses, and establish climate-induced displacement as an important aspect of both the climate change and global migration debates.

In the past ten years or so, displacement by development projects has gone on almost untamed under the globalization pressures to meet the demand for land from local and increasingly foreign investors. Focusing on India, this book looks at the complex issue of resettling people who are displaced for the sake of development. The book discusses how the affected farming communities are fiercely opposing the development projects that often leave them worse off than before, and how this conflict is a matter of serious concern for the planners, as it could discourage potential capital inflows and put India's growth trajectory into jeopardy. It analyses the challenge of protecting the interests of farmers, and at the same time ensuring that these issues do not hinder the path of development. The book goes on to highlight the emerging approaches to resettlement that promise a more equitable development outcome. A timely analysis of displacement and resettlement, this book has an appeal beyond South Asian Studies alone. It is of interest to policy makers, planners, administrators, and scholars in the field of resettlement and development studies.

At present and over the next few years, large-scale windfarms are being installed far off the coast of Germany in the North and Baltic Sea, making a major contribution to electricity generation from renewable energy sources. One of the German government's aims is to ensure the environmentally sound and sustainable development of offshore wind energy. Germany's first offshore test site, alpha ventus, was therefore accompanied from the construction phase to the first years of operation by an intensive environmental research programme, the StUKplus project, financed by the Federal Ministry for the Environment, Nature Conservation and Nuclear Safety and coordinated by the Federal Maritime and Hydrographic Agency. Marine and ecological

aspects have been researched there for more than five years to improve the level of knowledge about the ecological impacts of offshore windfarms. This book provides a broad, richly illustrated overview of applied and new research methods and monitoring techniques. It summarises the key research findings on the impacts on benthic communities, fish, marine mammals and birds, also taking into account underwater sound and sediment measurements. Interpreting the results in the sense of lessons learned, new challenges and perspectives are discussed for future sustainable offshore development in German waters.

This book explores the issue of development-induced resettlement, with a particular emphasis on the humanitarian, legal, and social aspects of this problem. Today, so-called 'development-induced displacement and resettlement' (DIDR) is one of the dominant causes of internal spatial mobility worldwide. Each year over 15 million people are forced to abandon their homes to make space for economic development infrastructure. The construction of dams and irrigation projects, the expansion of communication networks, urbanization and re-urbanization, the extraction and transportation of mineral resources, forced evictions in urban areas, and population redistribution schemes count among the many possible causes. Terminski aims to present the issue of development-caused displacement as a highly diverse, global social problem occurring in all regions of the world. As a human rights issue it poses a challenge to public international law and to institutions providing humanitarian assistance. A significant part of this book is devoted to the current dynamics of development-caused resettlement in Europe, which has been neglected in the academic literature so far.

Reinforce your understanding of nursing pharmacology! Corresponding to the chapters from the main text, the Study Guide for Clayton's Basic Pharmacology for Nurses, 18th Edition provides you with additional practice to help prepare for and succeed on the NCLEX®. Each exercise is linked to a chapter objective and various patient scenarios encourages you to use your knowledge of clinical pharmacology - further developing your critical thinking skills. Plus, a wide range of question formats reflects the question types you'll encounter on the latest NCLEX. Additional question formats allow you to practice with the new question types found on the NCLEX® exam. Clinical patient scenarios help you to develop critical thinking skills and apply your knowledge of nursing pharmacology. Medication administration handling and practice questions emphasized to reinforce safe medication administration practice. NEW! Exercises and review questions correspond with updated content from the text.

This book examines Syrian displacement since the start of the 2011 conflict. It considers how neighboring refugee-hosting states – namely Jordan, Turkey and Lebanon – have responded to Syrian refugees, as well as how the international humanitarian community has assisted and protected refugees and internally displaced persons (IDPs). Miller examines Syrian displacement as it relates to EU and US policies, and relates Syrian displacement to broader themes and debates on the international refugee regime and humanitarian intervention. The book argues that displacement is not a mere symptom or byproduct of the conflict in Syria, but a key variable that must be addressed with any peace plan or strategy for ending the conflict and rebuilding Syria. Responses to displacement should therefore not just be thought of in a humanitarian context, but also as a political, security and economic issue. Drawing on media reports, research briefs, scholarly books and articles, NGO reports and UN research to contextualize and critically analyze the blur of headlines and rhetoric on Syria, the book seeks to shed light on the political and humanitarian responses to displacement. It seeks to inform policymakers, practitioners and scholars about the

current Syrian displacement situation, helping to make sense of the complex web of literature on Syrian refugees and IDPs.

This book analyses the anthropological, historical, and legal contours of the crime of forcible displacement and proposes specific measures that the international community can adopt in order to prevent and/or punish the perpetration of the crime in the future.

One of the most hotly debated subjects in current events is the use of force by police personnel. In recent years, protests have taken place over most of the United States after several high-profile cases in which excessive force during arrests was claimed. This volume examines opinions surrounding police action in the United States and abroad, such as arguments in favor of or against controversial policies such as stop-and-frisk. Through this wide spectrum of experiences, students are encouraged to reach their own conclusions using the information they have read and synthesized.

This timely text examines the causes and consequences of population displacement related to climate change in the recent past, the present, and the near future. First and foremost, this book includes an examination of patterns of population displacement that have occurred or are currently underway. Second, the book introduces a three-tier framework for both understanding and responding to the public health impacts of climate-related population displacement. It illustrates the interrelations between impacts on the larger physical and social environment that precipitates and results from population displacement and the social and health impacts of climate-related migration. Third, the book contains first-hand accounts of climate-related population displacement and its consequences, in addition to reviews of demographic data and reviews of existing literature on the subject. Topics explored among the chapters include: Hurricane Katrina and New Orleans Hurricane Maria and Puerto Rico The California Wildfires Fleeing Drought: The Great Migration to Europe Fleeing Flooding: Asia and the Pacific Fleeing Coastal Erosion: Kivalina and Isle de Jean Charles Although the book is largely written from the perspective of a researcher, it reflects the perspectives of practitioners and policymakers on the need for developing policies, programs, and interventions to address the growing numbers of individuals, families, and communities that have been displaced as a result of short- and long-term environmental disasters. *Global Climate Change, Population Displacement, and Public Health* is a vital resource for an international audience of researchers, practitioners, and policymakers representing a variety of disciplines, including public health, public policy, social work, urban development, climate and environmental science, engineering, and medicine.

A one-stop Desk Reference, for engineers involved in all aspects of aerospace; this is a book that will not gather dust on the shelf. It brings together the essential professional reference content from leading international contributors in the field. Material covers a broad topic range from Structural Components of Aircraft, Design and Airworthiness to Aerodynamics and Modelling * A fully searchable Mega Reference Ebook, providing all the essential material needed by Aerospace Engineers on a day-to-day basis. * Fundamentals, key techniques, engineering best practice and rules-of-thumb together

in one quick-reference. * Over 2,500 pages of reference material, including over 1,500 pages not included in the print edition

In a protracted displacement situation, refugees are sequestered in camps without right of mobility or employment; their lives remain on hold and stagnate in a state of limbo for a long period. This book reviews the situation and results of research and policies that have left refugees as a forgotten group in protracted situations. The work features case studies by experts who conducted field work examining long-term protracted refugee situations in Nepal, Thailand and Bangladesh, the protracted internally displaced (IDP) situation in Sri Lanka, and the refugee and IDP situation in Afghanistan. Also discussed is an emerging protracted refugee and IDP problem in Iraq. The volume concludes with an analysis of the lessons learned and the applications for policy, and incorporates a valuable bibliography detailing research in this hugely important area. This is a critical resource for academics and policy makers concerned with migration and governance issues.

provides the latest knowledge and information on scientific advances, technology innovations, and commercial practice in heat treating. Features contributions from leading experts from around the world.

Policing America is an introductory textbook to policing in the United States. In a balanced approach, the text presents the theoretical foundations of American policing, with a focus on contemporary police practices and research. Oliver covers all of the key topics in policing, but does not overburden the student with either extraneous material only loosely related to policing or the overly detailed presentation of research more suited to a graduate program. In an engaging and readable style, the author offers an overview of past practices and research in policing, but emphasizes more contemporary policing practices and research. The focus of the book is on a contextual understanding of concepts in American policing. It is supported by the academic research, balanced with the voice of the American police officer. Features: Balanced approach that emphasizes contemporary policing. Written by an academic with police experience, resulting in an approach that combines the theoretical and the practical aspects of police work. Uses hypotheticals to bring the concepts to life for students. Student-friendly and accessible presentation incorporates graphic elements such as boxed features and charts to emphasize and summarize key points. Encourages students to think critically about the role of policing in today's society. Oliver is an experienced author of textbooks in the criminal justice and policing fields, having authored or co-authored over a dozen books.

This book focuses on emerging issues related to internal displacement in Africa. The six principal issues discussed are climate change, technology, xenophobia, harmful practices, generalized violence and development projects. Increasingly, the need to understand the root causes of the dimensions of internal displacement and the dimensions in which this displacement manifests have become a pertinent rhetoric in the discussion on internal displacement. Therefore, this monograph examines emerging issues for which there is very little in the internal displacement discussion, with the aim of providing knowledge within African

regional contexts to advance law and policy formation. The novelty of this book lies in the fact that it moves beyond the conventional discussion on internal displacement into grey areas on the subject in Africa, leveraging the African Union Convention for the Protection and Assistance of Internally Displaced Persons (the Kampala Convention). This book will be a significant reference point for researchers, professors, practitioners, judges, policy makers, international organizations, regional bodies, lawyers and scholars in the fields of migration, forced migration, and regional institutions.

A comprehensive, up-to-date presentation of how children and young people are affected by and respond to situations of armed conflict and postwar reconstruction. * Includes biographical profiles of real young people caught up in war and postwar reconstruction * Offers an annotated bibliography of key works, plus chapter-by-chapter links to further reading

Nigeria is the most dynamic country on the African continent. Yet the legacy of colonialism, deep-rooted corruption, exposure to climate change and the proliferation of small arms have created a precarious security situation that holds back the country's potential for peace and prosperity. Security in Nigeria explores the many security threats facing Nigeria and assesses the government's responses to date. With contributors spanning three continents, it provides an original and comprehensive analysis of 'old' and 'new' security threats and offers original solutions to address the crisis.

A must-have resource for any orthopaedic library, the latest edition of this technique-focused guide to the elbow has been revised and updated to give you even more coverage of trauma, arthroscopy, soft tissue injury, and joint replacement. The new full-color illustrations visually enhance an already great resource for both the novice becoming familiar with elbow anatomy and biomechanics and the seasoned surgeon treating difficult elbow problems.

Some ten million people are displaced or resettled every year, due to development projects, often with negative results. The contributors argue that there is a complexity and tension, when trying to reconcile enforced displacement with the creation of a socio-economically viable and sustainable environment.

Global Climate Change, Population Displacement, and Public Health The Next Wave of Migration Springer Nature

This ABC introduces medicine in areas of conflict or natural disaster responding to the growing number of regions affected.

Chapters deal with subjects such as earthquakes and landslides as well as nuclear incidents and biological warfare both nationally and internationally. It covers both logistical planning and medical aid as well as post-conflict recovery, offering psychological as well as medical and public health support. It prepares aid workers for a range of roles in all possible situations.
