Los trastornos mentales producen síntomas en el cuerpo? los problemas físicos afectan a la salud mental? Gran cantidad de síntomas físicos o corporales aparecen frecuentemente en trastornos psiquiátricos revelando la estrecha interacción existente entre el cuerpo y la mente. Las personas con trastornos de la conducta alimentaria necesitan una atención multidimensional para responder a los diferentes aspectos que engloban dichos trastornos. La insatisfacción corporal, la percepción distorsionada del propio cuerpo, la incapacidad para identificar sensibilidades internas (ej. hambre y saciedad), el rechazo hacia regiones corporales específicas (muslos, caderas y estómago) y el estado general de ineffectividad física y baja autoestima son características comunes que presentan los pacientes con anorexia nerviosa. Enfrentarse al propio cuerpo y al contacto corporal con otras personas suele vivirse como algo negativo. La Fisioterapia en salud mental ofrece una metodología de tratamiento que ha mostrado efectividad y es actualmente aplicada en los centros sanitarios de muchos países europeos (Suecia, Noruega, Dinamarca, Bélgica, etc.)."

Visualizing Research guides postgraduate students in art and design through the development and implementation of a research project, using the metaphor of a 'journey of exploration'. For use with a formal programme of study, from masters to doctoral level, the book derives from the creative relationship between research, practice and teaching in art and design. It extends generic research processes into practice-based approaches more relevant to artists and designers, introducing wherever possible visual, interactive and collaborative methods. The Introduction and Chapter 1 'Planning the Journey' define the concept and value of 'practice-based' formal research, tracking the debate around its development and explaining key concepts and terminology. 'Mapping the Terrain' then describes methods of contextualizing research in art and design (the contextual review, using reference material); 'Locating Your Position' and 'Crossing the Terrain' guide the reader through the stages of identifying an appropriate research question and methodological approach, writing the proposal and managing research information. Methods of evaluation and analysis are explored, and of strategies for reporting and communicating research findings are suggested. Appendices and a glossary are also included. Visualizing Research draws on the experience of researchers in different contexts and includes case studies of real projects. Although written primarily for postgraduate students, research supervisors, managers and academic staff in art and design and related areas, such as architecture and media studies, will find this a valuable research reference. An accompanying website [www.visualizingresearch.info](http://www.visualizingresearch.info) includes multimedia and other resources that complement the book.

This volume charts a new frontier of applied ethnomusicology by highlighting the role of music in both inciting and resolving a spectrum of social and political conflicts in the contemporary world. Contributors detail how music and performance are deployed to critique power structures and to nurture cultural awareness among communities in conflict. Speaking to the cultural implications of globalization and pointing out how music can promote a shared musical heritage across borders, the essays discuss the music of Albania, Azerbaijan, Brazil, Egypt, Germany, Indonesia, Iran, Ireland, North and South Korea, Uganda, the United States, and the former Yugoslavia. The volume also includes dozens of illustrations, including photos, maps, and musical scores. Contributors are Samuel Araujo, William Beeman, Stephen Blum, Salwa El-Shawan Castelo-Branco, David Cooper, Keith Howard, Inna Naroditskaya, John Morgan O'Connell, Svanibor Pettan, Anne K. Rasmussen, Adelaida Reyes, Anthony Seeger, Jane C. Sugarman, and Britta Sweers. John Morgan O'Connell is a senior lecturer in ethnomusicology and the director of the program in ethnomusicology at Cardiff University. Salwa El-Shawan Castelo-Branco is a professor of ethnomusicology and the director of the Institute of Ethnomusicology at New University of Lisbon, Portugal.

Who are we today? That deceptively simple question continued to be asked by the French historian and philosopher, Michel Foucault, who for the last three decades has had a profound influence on English-speaking scholars in the humanities and social sciences.; This text is designed for undergraduates and others who feel in need of some assistance when coming to grips with Foucault's voluminous and complex writings. Instead of dealing with them chronologically, however, this book concentrates on some of their central concepts, primarily Foucault's rethinking of the categories of "discourse", "power", and "the subject".; Foucault's writings contribute collectively to what he himself calls "an ontology of the present". His historical research was always geared towards showing how things could have been and still could be otherwise. This is especially the case with respect to the production of human subjects.

This text presents an up-to-date account of the soft-scale insects, "Coccidae", and covers almost the entire spectrum of the knowledge of this insect family. It is divided into three sections, covering: soft scale insects; their natural enemies; and damage and control.

Hundreds of grassroots groups have sprung up around the world to teach programming, web design, robotics, and other skills outside traditional classrooms. These groups exist so that people don't have to learn these things on their own, but ironically, their founders and instructors are often teaching themselves how to teach. There's a better way. This book presents evidence-based practices that will help you create and deliver lessons that work and build a teaching community around them. Topics include the differences between different kinds of learners, diagnosing and correcting misunderstandings, teaching as a performance art, what motivates and demotivates adult learners, how to be a good ally, fostering a healthy community, getting the word out, and building alliances with like-minded groups. The book includes over a hundred exercises that can be done individually or in groups, over 350 references, and a glossary to help you navigate educational jargon.

"One of the best books of its kind in decades." —The Wall Street Journal An epic achievement and a huge delight, the entire history of popular music over the past fifty years refracted through the big genres that have defined and dominated it: rock, R&B, country, punk, hip-hop, dance music, and pop Kelefa Sanneh, one of the essential voices of our time on music and culture, has made a deep study of how popular music unites and divides us, charting the way genres become communities. In Major Labels, Sanneh distills a career's worth of knowledge about music and musicians into a brilliant and omnivorous reckoning with popular music—as an art form (actually, a bunch of art forms), as a cultural and economic force, and as a tool that we use to build our identities. He explains the history of slow jams, the genius of Shania Twain, and why rappers are always getting in trouble. Sanneh shows how these genres have been defined by the tension between mainstream and outsider, between authenticity and phoniness, between good and bad, right and wrong. Throughout, race is a powerful touchstone: just as there have always been Black audiences and white audiences, with more or less overlap depending on the moment, there has been Black music and white music, constantly mixing and separating. Sanneh debunks cherished myths, reappraises beloved heroes, and upends familiar ideas of musical greatness,

arguing that sometimes, the best popular music isn't transcendent. Songs express our grudges as well as our hopes, and they are motivated by greed as well as idealism; music is a powerful tool for human connection, but also for human antagonism. This is a book about the music everyone loves, the music everyone hates, and the decades-long argument over which is which. The opposite of a modest proposal, Major Labels pays in full.

In Pura vida (Life is good) Spanish is more than vocabulary and grammar, just as Spanish-speaking cultures are more than products and practices. In this learner-centered introductory program, the authors' commitment to a methodology based on true-to-life experiences brings Spanish to life. Pura vida is the discovery of a Spanish-speaking world through the experiences of real people who share anecdotes and reflections on those experiences. Students relate to these people and make deeper, more meaningful connections between language and culture, and acquire Spanish with an unparalleled sense of personal engagement. In this 12-chapter introductory program, students don't only learn Spanish for real life, but also from real life. They discover that there is not just one homogeneous Hispanic culture, but rather that each Spanish-speaking country has its own rich, unique culture and that the people who live in these countries speak one common language with different accents, characteristics, and idiosyncrasies. The program offers truly seamless integration of cultural notions and language instruction and features 100% contextualized and personalized activities.

Movie trailers—those previews of coming attractions before the start of a feature film—are routinely praised and reviled by moviegoers and film critics alike: "They give away too much of the movie." "They're better than the films." "They only show the spectacular parts." "They lie." "They're the best part of going to the movies." But whether you love them or hate them, trailers always serve their purpose of offering free samples of a film to influence moviegoing decision-making. Indeed, with their inclusion on videotapes, DVDs, and on the Internet, trailers are more widely seen and influential now than at any time in their history. Starting from the premise that movie trailers can be considered a film genre, this pioneering book explores the genre's conventions and offers a primer for reading the rhetoric of movie trailers. Lisa Kernan identifies three principal rhetorical strategies that structure trailers: appeals to audience interest in film genres, stories, and/or stars. She also analyzes the trailers for twenty-seven popular Hollywood films from the classical, transitional, and contemporary eras, exploring what the rhetorical appeals within these trailers reveal about Hollywood's changing conceptions of the moviegoing audience. Kernan argues that movie trailers constitute a long-standing hybrid of advertising and cinema and, as such, are precursors to today's heavily commercialized cultural forms in which art and marketing become increasingly indistinguishable.

'Art Practice as Research' presents a compelling argument that the creative and cultural inquiry undertaken by artists is a form of research. The text explores themes, practice, and contexts of artistic inquiry and positions them within the discourse of research.

Sunk in a British ambush in 1708, the Spanish galleon San José was rumored to have one of the richest cargos ever lost at sea. Though treasure hunters have searched for the wreck's legendary bounty, no one knows exactly how much went down with the ship or exactly where it sank. Here, Carla Rahn Phillips confronts the legend of lost treasure with documentary records of the San José's final voyage and suggests that the loss of silver and gold en route to Spain paled in comparison to the loss of the six hundred men who went down with the ship. Drawing from rich archival records, Phillips presents a biography of the ship and its crew. With vivid detail and meticulous scholarship, the author tells the stories of the officers, sailors, apprentices, and pages who manned the ship and explains the historical context in which the San José became prey to the British squadron. But the story does not end with the sinking of the San José. While Phillips addresses the persistent question of how much treasure was on board when the ship went down, she focuses on the human dimensions of the tragedy as well. She recovers the accounts of British naval officers involved in the battle, and examines the impact of the ship's loss on the Spanish government, the survivors, and the families of the men who perished. Original, comprehensive, and compelling, The Treasure of the San José separates popular myth from history and sheds light on the human lives associated with a "treasure" ship.

Applied ethnomusicology is an approach guided by principles of social responsibility, which extends the usual academic goal of broadening and deepening knowledge and understanding toward solving concrete problems and toward working both inside and beyond typical academic contexts (International Council for Traditional Music 2007). This edited volume is based on the first symposium of the ICTM's Study Group on Applied Ethnomusicology in Ljubljana, Slovenia in 2008 that brought together more than thirty specialists from sixteen countries worldwide. It contains a Preface, an extensive Introduction, and twelve selected peer-reviewed articles by authors from Australia, Austria, Canada, Germany, Slovenia, Serbia, South Africa, the United Kingdom, and the United States of America, divided into four thematic groups. These groups encompass: diverse perspectives on the growing field of applied ethnomusicology in various geographical and problem-solving contexts; research and teaching-related connotations; the potential in contributing to sustainable music cultures; and the use of music in conflict resolution situations. The edited volume Applied Ethnomusicology: Historical and Contemporary Approaches brings together previously dispersed knowledge and perspectives, and offers new insights to various disciplines within the humanities and social sciences. Rooted in diverse scholarly traditions, it addresses a variety of challenges in today's world and aims to benefit the quality of human existence.

This is the first English-language history of Colombia as a coffee-producer.

The appearance of Coffee and Conflict in Colombia, 1886-1910, had several important consequences for the entire field of Latin American history, as well as for the study of

Colombia. Through Bergquist's analysis of this transitional period in terms of what has been called the dependency theory, he has left his mark on all subsequent studies in Latin American affairs; questions of economic development and political alignment cannot be dealt with without confronting Bergquist's work. He has also provided a major contribution to Colombian history by his examination of the growth of the coffee industry and Thousand Days War.

Focusing primarily on the work of Samuel Beckett, Toni Morrison, Wole Soyinka, and J. M. Coetzee, Ato Quayson launches a thoroughly cross-cultural, interdisciplinary study of the representation of physical disability. Quayson suggests that the subliminal unease and moral panic invoked by the disabled is refracted within the structures of literature and literary discourse itself, a crisis he terms "aesthetic nervousness." The disabled reminds the able-bodied that the body is provisional and temporary and that normality is wrapped up in certain social frameworks. Quayson expands his argument by turning to Greek and Yoruba writings, African American and postcolonial literature, depictions of deformed characters in early modern England and the plays of Shakespeare, and children's films, among other texts. He considers how disability affects interpersonal relationships and forces the character and the reader to take an ethical standpoint, much like representations of violence, pain, and the sacred. The disabled are also used to represent social suffering, inadvertently obscuring their true hardships.

Robert Bothwell, one of Canada's foremost historians, has told the Eldorado story with colour and drama. He has captured the excitement of frontier resource development in the 1930s and the intrigue of international politics in the 1940s and 1950s.

This collection is the first to examine the effects of bilingualism and multilingualism on the development of dialectal varieties of Spanish in Africa, America, Asia and Europe. Nineteen essays investigate a variety of complex situations of contact between Spanish and typologically different languages, including Basque, Bantu languages, English, and Quechua. The overall picture that evolves clearly indicates that although influence from the contact languages may lead to different dialects, the core grammar of Spanish remains intact. Silva-Corvalán's volume makes an important contribution both to sociolinguistics in general, and to Spanish linguistics in particular. The contributors address theoretical and empirical issues that advance our knowledge of what is a possible linguistic change, how languages change, and how changes spread in society in situations of intensive bilingualism and language contact, a situation that appears to be the norm rather than the exception in the world.

The Hispanic contribution to the making of the United States has been blatantly glossed over by most historians for the past three hundred years, despite the gallant effort of a handful of them who sought to do justice and set the record straight. This misrepresentation of the historical facts has rendered a whole nation to become oblivious to its true beginnings and formation, crippling its character and jeopardizing its future. This book, based on established and undisputed historical records, is a new attempt to bring out the whole truth, to make us realize how this nation really came into being. The making of present-day United States did not begin in 1607, nor was it confined to thirteen unsettled colonies barely occupying a minute portion of a vast continent. We need to set the historical clock back and then forward, from 1513 on through well past 1776, and give due credit to Spain and other Hispanic countries, such as Mexico, for laying down many of the foundations that made us what we are today. We need also to be proud of our Hispanic heritage, and trumpet it with equal fervor and appreciation as we do it with other less deserving ones. It is only then that we would be able to define our character both as a nation and as a people.

Cultural landscapes are usually understood within physical geography as those transformed by human action. As human influence on the earth increases, advances in palaeoecological reconstruction have also allowed for new interpretations of the evidence for the earliest human impacts on the environment. It is essential that such evidence is examined in the context of modern trends in social sciences and humanities. This stimulating new book argues that convergence of the two approaches can provide a more holistic understanding of long-term physical and human processes. Split into two major sections,

this book attempts to bridge the gap between the sciences and humanities. The first section, provides an analysis of the methodological tools employed in examining processes of environmental change. Empirical research in the fields of palaeology and Quaternary studies is combined with the latest theoretical views of nature and landscape occurring in cultural geography, archaeology and anthropology. The author examines the way in which environmental management decisions are made. The book then moves on to discuss the relevance of this perspective to contemporary issues through a wide variety of international case studies, including World Heritage protection, landscape preservation, indigenous people and cultural tourism.

Focusing on a unique arena, Thinking Through Art takes an innovative look at artists' experiences of undertaking doctorates and asks: If the making of art is not simply the formulation of an object but is also the formation of complex ideas then what effect does academic enquiry have on art practice? Using twenty-eight pictures, never before seen outside the artists' universities, Thinking Through Art focuses on art produced in higher educational environments and considers how the material product comes about through a process of conceiving and giving form to abstract thought. It further examines how this form, which is research art sits uneasily within academic circles, and yet is uniquely situated outside the gallery system. The journal articles, from eminent scholars, artists, philosophers, art historians and cultural theorists, demonstrate the complexity of interpreting art as research, and provide students and scholars with an invaluable resource for their art and cultural studies courses.

In A Philosophy of Technology: From Technical Artefacts to Sociotechnical Systems, technology is analysed from a series of different perspectives. The analysis starts by focussing on the most tangible products of technology, called technical artefacts, and then builds step-wise towards considering those artefacts within their context of use, and ultimately as embedded in encompassing sociotechnical systems that also include humans as operators and social rules like legislation. Philosophical characterisations are given of technical artefacts, their context of use and of sociotechnical systems. Analyses are presented of how technical artefacts are designed in engineering and what types of technological knowledge is involved in engineering. And the issue is considered how engineers and others can or cannot influence the development of technology. These characterisations are complemented by ethical analyses of the moral status of technical artefacts and the possibilities and impossibilities for engineers to influence this status when designing artefacts and the sociotechnical systems in which artefacts are embedded. The running example in the book is aviation, where aeroplanes are examples of technical artefacts and the world aviation system is an example of a sociotechnical system. Issues related to the design of quiet aeroplane engines and the causes of aviation accidents are analysed for illustrating the moral status of designing, and the role of engineers therein. Table of Contents: Technical Artefacts / Technical Designing / Ethics and Designing / Technological Knowledge / Sociotechnical Systems / The Role of Social Factors in Technological Development / Ethics and Unintended Consequences of Technology

World maritime trade lost momentum in 2018, with volumes expanding at 2.7 per cent, below the historical averages of 3.0 per cent and 4.1 per cent recorded in 2017. Total volumes are estimated to have reached 11 billion tons, an all-time high, according to UNCTAD records. UNCTAD is projecting 2.6 per cent growth in 2019 and an annual average growth rate of 3.4 per cent for the period 2019-2024. However, the outlook remains challenging, given the heightened uncertainty regarding trade policy and wide-ranging downside risks clouding the horizon. In 2018, world merchandise trade growth decelerated at an unexpected rate, and tariffs on trade between China and the United States of America escalated amid mounting trade tensions and a proliferation of national trade-restrictive measures. Apart from trade policy crosscurrents, geopolitics and sanctions, environmental concerns, fuel economics and tensions involving the Strait of Hormuz - a strategic maritime chokepoint - were in the headlines. Other forces at work continued to slowly reshape the maritime transport landscape. A new normal, contrasting with the historical perspective, appears to be taking hold. This trend is characterized by overall moderate growth in the global economy and trade, a supply chain restructuring in favour of more regionalized trade flows, a continued rebalancing of the Chinese economy, a larger role of technology and services in value chains and logistics, intensified and more frequent natural disasters and climate-related disruptions, and an accelerated environmental sustainability agenda with an increased awareness of the impact of global warming. A transition to the new normal calls for an improved understanding of the main issues at stake, better planning, and flexible and forward-looking-policies that can effectively anticipate change and enable appropriate response measures that take into account the heterogenous nature of developing countries as a group and their varied local conditions and needs..
