Graph-Theoretic Concepts in Computer Science Pinar Heggernes, 2016-09-27 This book constitutes revised selected papers from the 42nd International Workshop on Graph-Theoretic Concepts in Computer Science, WG 2016, held in Istanbul, Turkey, in June 2016. The 25 papers presented in this volume were carefully reviewed and selected from 74 submissions. The WG conferences aim to connect theory and practice by demonstrating how graph-theoretic concepts can be applied to various areas of computer science and by extracting new graph problems from applications. Their goal is to present new research results and to identify and explore directions of future research.

Probability and Statistics Michael J. Evans, Jeffrey S. Rosenthal, 2004 Unlike traditional introductory math/stat textbooks, *Probability and Statistics: The Science of Uncertainty* brings a modern flavor based on incorporating the computer to the course and an integrated approach to inference. From the start the book integrates simulations into its theoretical coverage, and emphasizes the use of computer-powered computation throughout.* Math and science majors with just one year of calculus can use this text and experience a refreshing blend of applications and theory that goes beyond merely mastering the technicalities. They'll get a thorough grounding in probability theory, and go beyond that to the theory of statistical inference and its applications. An integrated approach to inference is presented that includes the frequency

approach as well as Bayesian methodology. Bayesian inference is developed as a logical extension of likelihood methods. A separate chapter is devoted to the important topic of model checking and this is applied in the context of the standard applied statistical techniques. Examples of data analyses using real-world data are presented throughout the text. A final chapter introduces a number of the most important stochastic process models using elementary methods. *Note: An appendix in the book contains Minitab code for more involved computations. The code can be used by students as templates for their own calculations. If a software package like Minitab is used with the course then no programming is required by the students.

Engineering Human Computer Interaction and Interactive Systems Rémi Bastide,Philippe Palanque,Jörg Roth,2005-07-04 As its name suggests, the EHCI-DSVIS conference has been a special event, merging two different, although overlapping, research communities: EHCI (Engineering for Human-Computer Interaction) is a conference organized by the IFIP 2.7/13.4 working group, started in 1974 and held every three years since 1989. The group's activity is the scientific investigation of the relationships among the human factors in computing and software engineering. DSVIS (Design, Specification and Verification of Interactive Systems) is an annual conference started in 1994, and dedicated to the use of formal methods for the design of interactive systems. Of course these two research domains have a lot in common, and are informed by each other's results. The year 2004 was a good opportunity to bring closer these two research communities for an event, the 11th edition of DSVIS and the 9th edition of EHCI. EHCI-DSVIS was set up as a working conference bringing together researchers and practitioners interested in strengthening the scientific foundations of user interface design, specification and verification, and in examining the relationships between software engineering and human-computer interaction. The call for papers attracted a lot of attention, and we received a record number of submissions: out of the 65 submissions, 23 full papers were accepted, which gives an acceptance rate of approximately 34%. Three short papers were also included. The contributions were categorized in 8 chapters: Chapter 1 (Usability and Software Architecture) contains three contributions which advance the state of the art in usability approaches for modern software engineering.

The Methodology and Philosophy of Collective Writing Michael A. Peters, Tina Besley, Marek Tesar, Liz Jackson, Petar Jandric, Sonja Arndt, Sean Sturm, 2021-07-12 This multi-authored collection covers the methodology and philosophy of collective writing. It is based on a series of articles written by the authors in Educational Philosophy and Theory, Open Review of Educational Research and Knowledge Cultures to explore the concept of collective writing. This tenth volume in the Editor's Choice series provides insights into the philosophy of academic writing and peer review, peer production, collective intelligence, knowledge socialism, openness, open science and intellectual commons. This collection represents the development of the philosophy, methodology and philosophy of collective writing developed in the last few years by members of the Editors' Collective (EC), who also edit, review and contribute to Educational Philosophy and Theory (EPAT), as well as to PESA Agora, edited by Tina Besley, and Access, edited by Nina Hood, two PESA 'journals' recently developed by EC members. This book develops the philosophy, methodology and pedagogy of collective writing as a new mode of academic writing as an alternative to the normal academic article. The philosophy of collective writing draws on a new mode of academic publishing that emphasises the metaphysics of peer production and open review along with the main characteristics of openness, collaboration, co-creation and co-social innovation, peer review and collegiality that have become a praxis for the self-reflection emphasising the subjectivity of writing, sometimes called self-writing. This collection, under the EPAT series Editor's Choice, draws on a group of members of the Editors' Collective, who constitute a network of editors, reviewers and authors who established the organisation to further the aims of innovation in academic writing and publishing. It provides discussion and examples of the philosophy, methodology and pedagogy of collective writing. Split into three sections: Introduction, Openness and Projects, this volume offers an introduction to the philosophy and methodology of collective writing. It will be of interest to scholars in philosophy of education and those interested in the process of collective writing.
