It was the concept of the ocean as a global commons, free for everyone--first formulated by Hugo Grotius in his 1609 treatise, Mare Liberum--that stimulated a free global market. Today, the free market and the free ocean both suffer from rigorous, exploitive use. A new concept of how to relate to the ocean could transform the global economy and global politics. Solution 295-304: Mare Amoris proposes new practical, technological, and metaphysical scenarios of how to fall in love with the sea, and, eventually, have the sea fall in love with us. This issue also highlights the labor and economics issues facing the medium — the past and future of organizing a comics union, work-for-hire contracts, and how comic conventions can better serve creators — with the Journal's hallmark candor. Other features include an exclusive look at the unfinished graphic novel that Eisner and Geisel Award winner Geoffrey Hayes was working on before his untimely death in 2017, a peek inside the lush sketchbook of Sophie Franz, a timely work by Brazilian cartoonist Laura Lannes, a reconsideration of the comics canon by Skin Horse cartoonist Shaenon K. Garrity, and more!

Fretting fatigue experiments conducted on 304 stainless steel using a flexural-fatigue test arrangement with bolted-on fretting pads have demonstrated that fatigue life is reduced by at least a factor of 10 in the 265- to 334-MPa (38,500- to 48,500-psi) nominal-flexural-fatigue-stress range. In addition, experiments in which the fretting pads were removed after selected numbers of cycles, followed by continued flexural fatigue without fretting show that continued fretting beyond 50,000 cycles does not significantly further reduce fatigue life of 304 stainless steel at 317 MPa (46,000 psi). Microscopic examination of the fretted contact areas revealed fracture initiation sites as well as numerous cracks that did not propagate to failure. Flexural fretting fatigue experiments performed on mild steel showed an insensitivity of fatigue life to the incidence of fretting under flexural stress conditions of from 162 to 217 MPa (23,500 to 31,500 psi).
