Russians in Iran seeks to challenge the traditional narrative regarding Russian involvement in Iran and to show that whilst Russia's historical involvement in Iran is longstanding it is nonetheless much misunderstood. Russia's influence in Iran between 1800 and the middle of the twentieth century is not simply a story of inexorable intrusion and domination: rather, it is a complex and interactive process of mostly indirect control and constructive engagement. Drawing on fresh archival material, the contributors provide a window into the power and influence wielded in Iran not just by the Russian government through its traditional representatives but by Russian nationals operating in Iran in a variety of capacities, including individuals, bankers, and entrepreneurs. Russians in Iran reveals the multifaceted role that Russians have played in Iranian history and provides an original and important contribution to the history and international relations of Iran, Russia and the Middle East.

This open access book focuses on the development of methods, interoperable and integrated ICT tools, and survey techniques for optimal management of the building process. The construction sector is facing an increasing demand for major innovations in terms of digital dematerialization and technologies such as the Internet of Things, big data, advanced manufacturing, robotics, 3D printing, blockchain technologies and artificial intelligence. The demand for simplification and transparency in information management and for the rationalization and optimization of very fragmented and splintered processes is a key driver for digitization. The book describes the contribution of the ABC Department of the Polytechnic University of Milan (Politecnico di Milano) to R&D activities regarding methods and ICT tools for the interoperable management of the different phases of the building process, including design, construction, and management. Informative case studies complement the theoretical discussion. The book will be of interest to all stakeholders in the building process - owners, designers, constructors, and faculty managers - as well as the research sector.
