Rushmore is the second work from the team of Wes Anderson and Owen Wilson following the success of their debut screenplay and film *Bottle Rocket*. It is a refreshingly offbeat comedy about young Max Fish, a precocious pupil at a conservative private school. He is a live wire, a teenager full of madcap entrepreneurial schemes that usually in failure. His personal life becomes similarly complicated when he falls for his elegant teacher, Rosemary Cross, and finds himself vying for her favor with Herman Blume—who is portrayed in the film by Bill Murray—the wealthy father of two of his classmates. Max ultimately proves himself a figure of some tenacity as he negotiates the minefield of love, desire, and adolescence. At the Toronto Film Festival, Screen International called *Rushmore* "a real charmer filled with surprise twists and emotions that avoid sentimentality . . . A little gem."

Dear Friend, May I share a story that is very dear to my heart? It's a story of hillbillies and simple folk, net casters and tax collectors. A story of a movement that exploded like a just-opened fire hydrant out of Jerusalem and spilled into the ends of the earth: into the streets of Paris, the districts of Rome, and the ports of Athens, Istanbul, Shanghai, and Buenos Aires. A story so mighty, controversial, head spinning, and life changing that two millennia later we wonder: Might it happen again? Heaven knows we hope so. These are devastating times: 1.75 billions people are desperately poor; one billion are hungry. Lonely hearts indwell our neighborhoods and attend our schools. In the midst of it all, here we stand: you, me, and our one-of-a-kind lives. We are given a choice ... an opportunity to make a big difference during a difficult time. What if we did? What if we rocked the world with hope? Worth a try, don't you think? - Max Lucado One hundred percent of the author's royalties from *Outlive Your Life* products will benefit children and families through World Vision and other ministries of faith-based compassion.

Stress, obesity, poor mental health, drug addiction, bowel diseases, violence and fake news; a stark checklist of modern world problems and every one of them is an echo of our evolutionary past. In *Unfit for Purpose*, biologist and broadcaster Adam Hart explores the mismatch between our fundamental biology and the modern world we have created. In each chapter Adam reveals the many ways in which biological adaptations that evolved to help us survive and thrive now work against us. For example, in the modern world stress is a killer but how did 'fight or flight' instincts turn from life-savers to life-takers? Obesity might be a disease now but is it really just a troublesome side-effect of our complex evolutionary past? Whether it's the derailing of microbes in our gut, the rise of gluten and lactose intolerance, the problems of social media or the horrors of drug addiction we always seem to have one foot in the modern world and the other firmly in our evolutionary past. By probing deep into our evolutionary legacy, exploring the science, archaeology, medicine, genetics, sociology and more, to show how, in a modern world of our own making, we find ourselves 'unfit for purpose'. But all is not lost! By unpicking the evolutionary causes of many of our current woes, it reveals some secrets of evolutionarily-informed treatments that will change the way we think about ourselves and our future.

When faced with productivity problems in the workplace, engineers might call for better machines, and management might call for better-trained people, but ergonomists call for a better interface and better interaction between the user and the machine. *Introduction to Ergonomics, 2nd Edition*, provides a comprehensive introduction to ergonomics as the study of the relationship between people and their working environment. The author presents evidence from field trials, studies and experiments that demonstrate the value of ergonomics in making the workplace safer, more error resistant, and compatible with users' characteristics and psychological and social needs. Evidence for the effectiveness of each topic is incorporated throughout the book as well, which helps practitioners to make the case for company investment in ergonomics. In addition, the author outlines international standards for ergonomics that influence engineering and design and pave the way for a more precise form of practice. Extensively revised and updated, this second edition explains the main areas of application, the science that underpins these applications, and demonstrates the cost-effectiveness of implementing the applications in a wide variety of work settings.

The globalization of companies is the involvement of customers, producers, suppliers, and other stakeholders in the global marketing process. Global marketing therefore reflects the trend of firms selling products and services across many countries. Drawing on an incomparable breadth of international examples, Svend Hollensen not only demonstrates how global marketing works, but also how it relates to real decisions around the world. This book offers a truly global approach with cases and exhibits from all parts of the world, including Europe, the Middle East, Africa, the Far East, North and South America. It provides a complete and concentrated overview of the total international marketing planning process, along with many new, up-to-date exhibits and cases, which illustrate the theory by showing practical applications. Extensive coverage of hot topics such as glocalization, born globals, value creation, value net, celebrity branding, brand piracy, and viral marketing, as well as a comprehensive new section on integrated marketing communication through social networking. Brand new case studies focus on globally recognized brands and companies operating in a number of countries, including Build-A-Bear Workshop, Hello Kitty, Ralph Lauren and Sony Music Entertainment. Video cases featuring firms such as Nivea, Reebok, Starbucks, Hasbro and McDonald's accompany every chapter and are available at [www.pearsoned.co.uk/hollensen](http://www.pearsoned.co.uk/hollensen). Real-world examples and exhibits enliven the text and enable the reader to relate to marketing models.

This is the first book to examine comprehensively the chlorine industry and its effects on the environment. It covers not only the history of chlorine production, but also looks at its products, their effects on the global environment, and the international legislation which controls their use, release, and disposal. Individual chapters are dedicated to subjects such as releases of organochlorines into the environment, and the environmental impact of ozone depletion, providing simple explanations of these complex issues. These are backed up with case studies of landmark events in the history of the chlorine industry - for example the Seveso explosion or the Yusho and Yu-Cheng mass poisonings. With a clear, concise text and numerous compilations of critical data, this book will prove an invaluable source reference for environmental scientists, students, and policy makers with an interest in this subject.

This volume represents the proceedings of the First International Conference on Sustainability in Energy and Buildings, SEB'09, held in the City of Brighton and Hove in the United Kingdom, organised by KES International with the assistance of the World Renewable Energy Congress / Network, and hosted by the University of Brighton. KES International is a knowledge transfer organisation providing high-quality conference events and publishing opportunities for researchers. The KES association is a community consisting of several thousand research scientists and engineers who participate in KES activities. For over a decade KES has been a leader in the area of Knowledge Based and Intelligent information and Engineering Systems. Now KES is starting to make a contribution in the area of Sustainability and Renewable Energy with this first conference

specifically on renewable energy and its application to - mestic and other buildings. Sustainability in energy and buildings is a topic of - creasing interest and importance on the world agenda. We therefore hope and intend that this first SEB event may grow and evolve into a conference series. KES International is a member of the World Renewable Energy Congress / N- work which is Chaired by Professor Ali Sayigh. We are grateful to Professor Sayigh for the collaboration and assistance of WREC/N in the organisation of SEB'09. We hope to continue to work with WREC/N in the future on projects of common interest.

Like many other new technologies which have since been seized and exploited by others, the industrial robot is a British invention. In 1957, a patent was produced by a British inventor, Cyril Walter Kenward, and later it became crucial to the future of robotics. For across the Atlantic two robot builders, Unimation and AMF, both infringed this patent and ultimately a cash settlement was made to Kenward. The owner of Unimation Inc. was Joseph Engelberger, an entrepreneur and avid reader of Isaac Asimov, the writer who helped to create the image of the benevolent robot. It is claimed that Engelberger's journey of fame down the road which led to him being hailed as the 'father of robotics' can be traced to the day that he met George C. Devol at a cocktail party. Devol was an inventor with an impressive list of patents to his name in the electronics field. One of Devol's patent applications referred to a Programmed Transfer Article. Devol's patent was issued in 1961 as US Patent 2,988,237, and this formed the basis of the Unimate robot which first saw the light of day in 1960. The first Unimate was sold to Ford Motor Company which used it to tend a die-casting machine. It is perhaps ironic that the first robot was used by a company which refused to recognise the machine as a robot, preferring instead to call it a Universal Transfer Device.

House cleaning has been an innate human activity forever but only since the early 19th century have mechanical devices replaced the physical labor (performed mostly by women). Mechanical carpet sweepers were replaced by manual suction cleaners, which in turn were replaced by electric vacuum cleaners in the early 20th century. Innovative inventors, who improved vacuum cleaners as electricity became commonly available, made these advances possible. Many early manufacturers failed, but some, such as Bissell, Hoover, Eureka and others, became household names as they competed for global dominance with improved features, performance and appearance. This book describes the fascinating people who made this possible, as well as the economic, cultural and technological contexts of their times. From obscure beginnings 200 years ago, vacuum cleaners have become an integral part of modern household culture.

This book introduces geometric shapes and describes how tangram puzzles have been popular in many cultures.

First published in 1891, Pellegrino Artusi's *La scienza in cucina e l'arte di mangiar bene* has come to be recognized as the most significant Italian cookbook of modern times. It was reprinted thirteen times and had sold more than 52,000 copies in the years before Artusi's death in 1910, with the number of recipes growing from 475 to 790. And while this figure has not changed, the book has consistently remained in print. Although Artusi was himself of the upper classes and it was doubtful he had ever touched a kitchen utensil or lit a fire under a pot, he wrote the book not for professional chefs, as was the nineteenth-century custom, but for middle-class family cooks: housewives and their domestic helpers. His tone is that of a friendly advisor – humorous and nonchalant. He indulges in witty anecdotes about many of the recipes, describing his experiences and the historical relevance of particular dishes. Artusi's masterpiece is not merely a popular cookbook; it is a landmark work in Italian culture. This English edition (first published by Marsilio Publishers in 1997) features a delightful introduction by Luigi Ballerini that traces the fascinating history of the book and explains its importance in the context of Italian history and politics. The illustrations are by the noted Italian artist Giuliano Della Casa.
