

A Berlin R Lic Writings On Germany Modern German Culture And Literature

Reproduction of the original: Writings In Connection with the Donatist Controversy by Aurelius Augustine

Many practice-based researchers have expert knowledge of doing research but often experience difficulties when writing it up and communicating the significance of what they have done. This book aims to help bridge the gap. Packed with practical advice and strong theoretical resources it takes you through the basics of designing and producing your text so that it will meet established standards and high quality assurance expectations. Divided into 3 distinctive parts, key points include: understanding writing practices engaging with the literatures how to write up a project report or dissertation how writing is judged in terms of professional and academic writing practices developing ideas for further study and publication Writing up Your Action Research Project is an essential text for practitioners on professional education and undergraduate courses across disciplines who want their writing to reflect the excellence of their research. It is the ideal companion to the author's You and Your Action Research Project, now in its fourth edition.

Letter writing was widespread in the Graeco-Roman world, as indicated by the large number of surviving letters and their extensive coverage of all social categories. Despite a large amount of work that has been done on the topic of ancient epistolography, material and formatting conventions have remained underexplored, mainly due to the difficulty of accessing images of letters in the past. Thanks to the increasing availability of digital images and the appearance of more detailed and sophisticated editions, we are now in a position to study such aspects. This book examines the development of letter writing conventions from the archaic to Roman times, and is based on a wide corpus of letters that survive on their original material substrates. The bulk of the material is from Egypt, but the study takes account of comparative evidence from other regions of the Graeco-Roman world. Through analysis of developments in the use of letters, variations in formatting conventions, layout and authentication patterns according to the sociocultural background and communicational needs of writers, this book sheds light on changing trends in epistolary practice in Graeco-Roman society over a period of roughly eight hundred years. This book will appeal to scholars of Epistolography, Papyrology, Palaeography, Classics, Cultural History of the Graeco-Roman World.

"The fox knows many things, but the hedgehog knows one big thing." This ancient Greek aphorism, preserved in a fragment from the poet Archilochus, describes the central thesis of Isaiah Berlin's masterly essay on Leo Tolstoy and the philosophy of history, the subject of the epilogue to War and Peace. Although there have been many interpretations of the adage, Berlin uses it to mark a fundamental distinction between human beings who are fascinated by the infinite variety of things and those who relate everything to a central, all-embracing system. Applied to Tolstoy, the saying illuminates a paradox that helps explain his philosophy of history: Tolstoy was a fox, but believed in being a hedgehog. One of Berlin's most celebrated works, this extraordinary essay offers profound insights about Tolstoy, historical understanding, and human psychology. This new edition features a revised text that supplants all previous versions, English translations of the many passages in foreign languages, a new foreword in which Berlin biographer Michael Ignatieff explains the enduring appeal of Berlin's essay, and a new appendix that provides rich context, including excerpts from reviews and Berlin's letters, as well as a startling new interpretation of Archilochus's epigram.

In the light of the considerable reliance placed by the international business community on systems of dispute settlement, this work gathers together contributions (in French & English) by experts from a wide range of specialisations. They successfully address the regulation & practice of arbitration in the Arab World, assessing the contribution of European & American legislation & the impact of the UNCITRAL model law. The contributions by eminent legal practitioners, academics, members of government & judiciary, reflect also upon current developments. The volume publishes the proceedings of the third Euro-Arab Congress held in Amman, October 1989; the second volume Euro-Arab Arbitration II was published in 1989 by Graham & Trotman.

The first annotated English translation of the Hebrew writings of the great eighteenth-century Berlin philosopher

Alphabetical entries cover individual historians; surveys of national or regional historiographies; and topical articles on themes, -isms, and periods

(Peeters 1992)

Articles on early Hebrew printing encompassing title-page motifs and entitling books; authors and places of publication including books opposed to gambling, on philology, and the massacres of tah-ve-tat (1648-48); small diverse places of printing; and on Christian-Hebraism.

This carefully crafted ebook: "The Essential Writings of Philip Schaff" is formatted for your eReader with a functional and detailed table of contents. "History of the Christian Church" is an eight volume account of Christian history written by Philip Schaff. In this great work Schaff covers the history of Christianity from the time of the apostles to the Reformation period. "The Creeds of Christendom, with a History and Critical Notes" is a three volume set in which Schaff is classifying and explaining many different statements of belief and articles of faith throughout the Christian history. He deals with the history of the creeds, starting with the Ecumenical creeds, and moving to Greek and Roman creeds, then Old Catholic Union creeds, and finally to the Evangelical creeds and Modern Protestant creeds.

Art and design students today face a wide range of writing tasks – from reflective and self-promotional pieces to reviews, essays and dissertations. This book is an answer to art and design students and staff, disheartened by negative past experiences, who say that they loathe writing, and encourages different approaches to writing – integrating it into studio practice, and promoting the notion of 'warm up' preparations. This very practical volume, written for tutors and students, nurtures writing's creative role in the process of art and design. It uses short exercises and creative writing techniques combined with the energy and liveliness of the workshop situation to help with academic issues in writing assignments. Advancing the application of Carl Rogers' ideas, this book presents new theoretical and practical views of Rogerian influences on rhetorical theory, the teaching of writing, and pragmatic discourse. Practically, the contributors focus on the dynamics of Rogerian communication in real-world contexts, extending Rogers' person-centered principles into

classroom interactions, peer response groups, and other collaborations. Theoretically, discussions situate Rogerian principles within the contexts of persuasive and dialogical rhetoric, and of psychoanalytic and philosophical intersubjectivity. Also included are transcripts of an interview with Rogers, and a forum discussion epitomizing Rogerian principles in action.

The Seventeenth Century Hebrew Book covers the gamut of Hebrew literature in that century. Each entry has a descriptive text page and an accompanying reproduction. There is an extensive introduction with an overview of Hebrew printing in the seventeenth century.

More than a generation of German-speaking students around the world have worked their way to an understanding and appreciation of the power and beauty of modern theoretical physics - with mathematics, the most fundamental of sciences - using Walter Greiner's textbooks as their guide. The idea of developing a coherent, complete presentation of an entire field of science in a series of closely related textbooks is not a new one. Many older physicists remember with real pleasure their sense of adventure and discovery as they worked their ways through the classic series by Sommerfeld, by Planck and by Landau and Lifshitz. From the students' viewpoint, there are a great many obvious advantages to be gained through use of consistent notation, logical ordering of topics and coherence of presentation; beyond this, the complete coverage of the science provides a unique opportunity for the author to convey his personal enthusiasm and love for his subject. The present five volume set, Theoretical Physics, is in fact only that part of the complete set of textbooks developed by Greiner and his students that presents the quantum theory. I have long urged him to make the remaining volumes on classical mechanics and dynamics, on electromagnetism, on nuclear and particle physics, and on special topics available to an English-speaking audience as well, and we can hope for these companion volumes covering all of theoretical physics some time in the future.

Reprint of the original, first published in 1890.

The overall aim of this book, an outcome of the European FP7 FET Open NESS project, is to contribute to the ongoing effort to put the quantitative social sciences on a proper footing for the 21st century. A key focus is economics, and its implications on policy making, where the still dominant traditional approach increasingly struggles to capture the economic realities we observe in the world today - with vested interests getting too often in the way of real advances. Insights into behavioral economics and modern computing techniques have made possible both the integration of larger information sets and the exploration of disequilibrium behavior. The domain-based chapters of this work illustrate how economic theory is the only branch of social sciences which still holds to its old paradigm of an equilibrium science - an assumption that has already been relaxed in all related fields of research in the light of recent advances in complex and dynamical systems theory and related data mining. The other chapters give various takes on policy and decision making in this context. Written in nontechnical style throughout, with a mix of tutorial and essay-like contributions, this book will benefit all researchers, scientists, professionals and practitioners interested in learning about the 'thinking in complexity' to understand how socio-economic systems really work.
