Unlike some other reproductions of classic texts (1) We have not used OCR (Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

"Flowering Plants is a comprehensive source of botanical information. More than 100 flowering plant families are profiled with authoritative text and featured in more than 700 beautiful artworks. An easily navigated reference, this book is ideal for gardeners, horticulturalists and anyone interested in botany. The book is divided into the two flowering plant groups: the dicotyledons, or dicots, which typically have two leaves in the seed's embryo, and the monocotyledons, or monocots, which typically have one leaf in the seed's embryo. This handsome reference includes familiar ornamentals, such as carnations, begonias and daffodils, as well as plants that are not as well known for their flowers, such as milkweed, ginseng and tea. Each entry is presented across two or more pages and includes a full page of detailed color illustrations that show the plant's anatomy, with all parts labeled in Latin and English. The expert text describes the plant's physical features, distribution and economic uses. Also included is a classification list of all plant families."--Amazon website.

Excerpt from A Catalogue of the Flowering Plants and Ferns of Worcester County, Massachusetts IN 1883 I prepared for publication the first Catalogue of the Plants of Worcester County, Massachusetts, containing eight hundred and twelve species and well-marked varieties. In 1894 the second edition, enlarged to ten hundred and ninety-eight species, was issued. In the meantime, by the kind and generous help of many friends, all of whom will understand, I hope, that whether their names appear in these pages or not, my sense of obligation to them is here fully acknowledged and gratefully remembered, more than a hundred additions have been made. The arrangement and the nomenclature are those of Gray's New Manual of Botany, Seventh Edition, 1908, the book most likely to be used by all persons interested in the study of the local flora here given. In the hope that they may add some interest to certain plants in the catalogue, I have inserted references to a few plants, made by writers of recognized standing in American and English literature. I have not included writers like Thoreau in this country and Jefferies in England, whose writings abound in such references, on the ground that their works are more or less well known to all persons interested in wild flowers found in their respective countries. Our aim is to provide readers with the highest quality reproductions of fiction and non-fiction literature that has stood the test of time. The many thousands of books in our collection have been sourced from libraries and private collections around the world. The titles that Trieste Publishing has chosen to be part of the collection have been scanned to simulate the original. Books from that period are often spoiled by imperfections that did not exist in the original. Imperfections could be in the form of blurred text, photographs, or missing pages. It is highly unlikely that this would occur with one of our books. Our extensive quality control ensures that the readers of Trieste Publishing's books will be delighted with their purchase. Our staff has thoroughly reviewed every page of all the books in the collection, repairing, or if necessary, rejecting titles that are not of the highest quality. This process ensures that the reader of one of Trieste Publishing's titles receives a volume that faithfully reproduces the original, and to the maximum degree possible, gives them the experience of owning the original work.
