Are your collections up for grabs? Does the spouse of one of your trustees have too much to say about developing the exhibition schedule? How much is too much public participation? Where does a curator's authority begin and end? With money increasingly difficult to raise, is a museum more likely to accede to potential funders' demands even when those demands might compromise the museum's integrity? When a museum is struggling with debilitating debt, should the sale of selected items from its collections and the use of the resulting proceeds bring the museum into a more stable financial position? When a museum attempts to build its attendance and attract local visitors by crowdsourcing exhibitions, is it undermining its integrity? Ethical questions about museum activities are legion, yet they are usually only discussed when they become headlines in newspapers. Museum staff respond to such problems under pressure, often unable to take the time required to think through the sensitive and complex issues involved. Grounded in a series of case studies, *A Practical Guide to Museum Ethics* confronts types of ethical dilemmas museums face and explores attempts to resolve them in chapters dealing with accessibility, disability, and diversity; collections; conflict of interest; governance; management; deaccessioning; and accountability and transparency. Suitable for classroom use as well as a professional reference, here is a comprehensive, practical guide for dealing with ethical issues in museums.

Sentiment analysis research has been started long back and recently it is one of the demanding research topics. Research activities on Sentiment Analysis in natural language texts and other media are gaining ground with full swing. But, till date, no concise set of factors has been yet defined that really affects how writers' sentiment i.e., broadly human sentiment is expressed, perceived, recognized, processed, and interpreted in natural languages. The existing reported solutions or the available systems are still far from perfect or fail to meet the satisfaction level of the end users. The reasons may be that there are dozens of conceptual rules that govern sentiment and even there are possibly unlimited clues that can convey these concepts from realization to practical implementation. Therefore, the main aim of this book is to provide a feasible research platform to our ambitious researchers towards developing the practical solutions that will be indeed beneficial for our society, business and future researches as well.
