Excerpt from The Chemistry of Gas Manufacture, Vol. 1: A Practical Handbook on the Production, Purification, and Testing of Illuminating and Fuel Gas, and on the Bye-Products of Gas Manufacture The extensive revision and enlargement of this handbook, which the advances in the Gas Industry made imperative as soon as the Second Edition was exhausted, practically precluded its continued publication as a single volume. The manufacture and use of Acetylene, to which a chapter had been devoted in that edition, could no longer be adequately or appropriately dealt with in such a manner, and a new handbook on "Acetylene" was, therefore, written by Mr. F. H. Leeds, in collaboration

with the undersigned, and published in 1903. The revision of the rest of this work, as projected, entailed the re-writing of the major part of it, and in order neither to delay publication unduly nor to make too bulky a volume, it was decided to publish as a first volume the portion treating of the Materials and Processes of Gas Manufacture before the completion of the revision of the remainder of the book. The volume, published accordingly in 1904, has been revised throughout, and several pages of fresh matter have been added for the present new edition. A second volume, covering the "Testing and Use of Gas," is in course of preparation. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. "Scumbling" relates to that description of painting in which portions of the last coat are removed in order to expose part of the coat beneath. Glazing is a

system of painting whereby a thin, transparent coat of one color - which is usually bright - is glazed or painted over another color which is a solid and is often relatively sombre in hue. Due to the actual mounted samples this book is highly useful for teaching purposes.

guide, veteran explorer and polar pioneer Dixie Dansercoer outlines the particular considerations and requirements for all kinds of polar expedition: short self-guided trips, guided Last Degree expeditions and long-haul expeditions, self-financed or sponsored, to the Arctic or the Antarctic. Illustrated with first-hand accounts of hazardous crossings, tricky decision points and encounters with polar bears, as well as evocative expedition photography, sections cover motivation and limitations, understanding the cold, preparations, what to take, travel during the day and camp organisation at night, as well as hazards from polar bears to exploding stoves and whiteout to frostbite. For newcomers in need of guidance, it will help them begin their mental and physical preparation for surviving in such extreme environments. For returning explorers, there is plenty of information on equipment, techniques and experiences to compare and contrast. Also includes a glossary of polar terms and a recommended daily polar regime.

Analytical chemists in the pharmaceutical industry are always looking for more-efficient techniques to meet the analytical challenges of today's pharmaceutical industry. One technique that has made steady advances in pharmaceutical analysis is supercritical fluid chromatography (SFC). SFC is meeting the chromatography needs of the industry by providing efficient and selective testing capabilities on the

analytical and preparative scale. The supercritical fluid mobile phase, consisting mainly of CO₂, facilitates cost reduction costs and helps the industry in meeting green chemistry standards. This book provides a comprehensive overview of the use of SFC in pharmaceutical analysis. *Supercritical Fluid Chromatography* reviews the use of SFC in drug-discovery applications and describes its application in drug development. When a drug is developed and brought to market, it is tested many times for impurities and degradants, enantiomeric purity, and analytical and preparative isolations—it is tested during discovery and development and for under-regulated and unregulated methodologies. The book describes the use of SFC for each of these applications and discusses more in-depth topics, such as the use of SFC in mass spectrometric and polarographic detection. The book also sheds light on the role of SFC in drug development from natural products and the advancement of SFC with new technologies and its use in pilot-scale operations as a chromatographic technique.

Organicum: Practical Handbook of Organic Chemistry focuses on the theory, laboratory practice, and aspects of technical use related to organic chemistry. This book discusses the standard apparatus for organic reactions, heating of inflammable liquids, performance of a simple distillation, and partition chromatography in separating columns. The time factor in organic chemical reactions, distribution of the electron density in organic molecules, and synthesis of ethers from alkoxides or phenoxides are also elaborated. This text likewise covers the mechanism

of electrophilic aromatic substitution, quinones from aromatic hydrocarbons, and reduction of carbonyl compounds by means of complex hydrides. Other topics include the reaction with ammoniacal solution of a silver salt, preparation of the dimedone derivatives, and saturated aliphatic hydrocarbons. This publication is suitable for chemists and researchers conducting work in organic chemistry.

This book discusses in a systematic manner the role of separation in HPLC, the types and characteristics of stationary phases and of mobile phases used in this technique, as well as other factors influencing the separation. The selection process of stationary and mobile phase for a specific separation is described as related to the physico-chemical characteristics of the molecules to be separated and of their matrix. All these subjects are discussed from the point of view of the new developments in HPLC. The book also includes a part presenting the practice of modern HPLC as necessary for applications, particularly related to the analysis of pharmaceutical and biological samples, food and beverages, environmental samples, etc. Gives a clear presentation of notions and concepts
Discusses key parameters in HPLC separation
Includes modern developments in HPLC
Describes interrelation between various HPLC features (solvent pressure, separation, detection)
Includes a large number of references.

Natural Products, broadly defined as high value chemical entities derived from plants or microbial sources, have been known and exploited for many years. In recent years, as the need for higher potency and predictability

of such products has increased, more sophisticated concentration and isolation procedures have been developed. With the passage of time, such procedures have been rationalized in terms of scientific principles but, in general, theory has followed behind practice, leading at any given time to an absence from the literature of methods which are truly state of the art. Downstream Processing of Natural Products: A Practical Handbook is a highly practical manual which addresses this issue, and guides researchers and industrial workers through the many potential pitfalls of natural product isolation. The contributors to this volume, all of whom have wide practical experience in this field, present state-of-the-art techniques and observations. The three main stages of natural product purification are covered, namely product release, capture, and purification, and both proteins and secondary metabolites are covered. There is special mention of the requirements of the regulatory authorities with respect to Good Manufacturing Practice, and practical guidance is given on scale-up procedures and process scale instrumentation. Downstream Processing of Natural Products: A Practical Handbook will provide essential practical guidance to all those involved in natural product isolation. This includes academic and industrial researchers, postgraduate students and technicians working in the biotechnology field.
