

## A Szoke Indian

This book explores the contemporary art of India in a volume as colorful, vibrant, and diverse as the country itself. Chalo means "Let's go!" in Hindi and the enthusiasm of that expression is evident throughout the pages of this catalogue for an exhibition at the Essl Museum in Austria. Encompassing photography, and installation, the book features more than one hundred works by artists and collectives from all over India. Themes of identity, urbanization, spirituality, and politics reflect the country's recent transformation into a global power. Accompanying the reproductions are essays that explore the impact of the economic and cultural revolution on India and focus on the modern art of specific geographic regions throughout the country. Looking beyond the popular Bollywood-influenced images of twenty-first-century India, this important volume reveals the complex artistic practices taking place throughout the country.

This book presents a concise and comprehensive overview of the most important protective and risk factors for women's health, and reviews the main areas of medical science from a gender perspective. Numerous scientific experiments and studies have shown how gender differences significantly affect the clinical presentation of physical and mental health disorders as well as responses to treatments. This text highlights these issues, while at the same time reflecting on the practical implications of the theoretical knowledge presented. It also examines the organization of social and health services, which should increasingly take into account the specificities related to gender differences and where equality is based on truly embracing these differences. The final part provides insights into the experiences and testimonies collected by the authors of the book. Written by a multidisciplinary team of medical, psychosocial and humanities professionals, this book is of interest to health professionals and medical students.

This book comprises select proceedings of the annual conference of the Indian Geotechnical Society. The conference brings together research and case histories on various aspects of geotechnical and geoenvironmental engineering. The book presents papers on geotechnical applications and case histories, covering topics such as (i) Characterization of Geomaterials and Physical Modelling; (ii) Foundations and Deep Excavations; (iii) Soil Stabilization and Ground Improvement; (iv) Geoenvironmental Engineering and Waste Material Utilization; (v) Soil Dynamics and Earthquake Geotechnical Engineering; (vi) Earth Retaining Structures, Dams and Embankments; (vii) Slope Stability and Landslides; (viii) Transportation Geotechnics; (ix) Geosynthetics Applications; (x) Computational, Analytical and Numerical Modelling; (xi) Rock Engineering, Tunnelling and Underground Constructions; (xii) Forensic Geotechnical Engineering and Case Studies; and (xiii) Others Topics: Behaviour of Unsaturated Soils, Offshore and Marine Geotechnics, Remote Sensing and GIS, Field Investigations, Instrumentation and Monitoring, Retrofitting of Geotechnical Structures, Reliability in Geotechnical Engineering, Geotechnical Education, Codes and Standards, and other relevant topics. The contents of this book are of interest to researchers and practicing engineers alike.

The Present Work Is An Account Of An Intensive Field Study Of A Single Village, Typical Of Indian Village Society. It Approaches The Problem Of Peasant Culture From An Empirical Point Of View, Thus Giving A New Direction To The Study Of Indian Peasants And Their Way Of Life. This is the time when legacy, pathogenic, and emerging contaminants must be talked about, understood, and dealt with together.

While the geogenic contamination of the groundwater is a well-established phenomenon that is considered as legacy contaminants that risk people's health globally, both pathogenic and emerging contaminants like various water-borne pathogens and pharmaceutical personal care products (PPCPs) are becoming imperative for their acute and chronic toxic effects. While contaminated groundwater consumption leads to skin pigmentation, hyperkeratosis, kidney damage, cardiovascular disease, and children's overall development, poor sanitation-related pathogenic microorganisms cause a significant number of child and prenatal deaths. Simultaneously, antibiotic microbial resistance (AMR) is expected to kill 100 million people by 2050. However, there are rare texts that combine aspects of all these three under a single book cover. This book gives an understanding of the occurrence, fate, and transport of geogenic, microbial, and anthropogenic contaminants in the groundwater. It covers not only the scientific and technical aspects but also environmental, legal, and policy aspects for contaminant management in the environment under the paradigm shift of COVID-19. This book is intended to bring the focus on the natural contaminants—biotic or abiotic—in the post-COVID Anthropocene, which is illustrating a significant alteration of systems and the subsequent downstream impacts owing to globalization. This book has compiled global work on emergence, mass flow, partitioning, and activation of geogenic, emerging, and pathogenic contaminants in various spheres of environment with special emphasis on soil, sediment, and aquatic systems for enhancing the understanding on their migration and evolution for the welfare of mankind.

This book discusses essential aspects of diabetic foot ulcers, including evidence-based information on its pathogenesis and pathophysiology, as well as the molecular mechanisms and biomechanics of the diabetic foot. It also highlights the need for a multidisciplinary team to be involved in the management of diabetic patients with foot ulcers, and describes available and future tools for evaluating patients who are at risk. Exploring the main current therapies as well as the latest developments, future directions and potential new treatments, such as growth factors, stem cell therapy, alternative medicine and nanotechnology, the book is a valuable resource for clinicians and medical graduates but will also appeal to researchers working in the field.
