

Academic Culture A Students Guide To Studying At University 2nd Edition Book

Bestselling author Alex Kotlowitz is one of this country's foremost writers on the ever explosive issue of race. In this gripping and ultimately profound book, Kotlowitz takes us to two towns in southern Michigan, St. Joseph and Benton Harbor, separated by the St. Joseph River. Geographically close, but worlds apart, they are a living metaphor for America's racial divisions: St. Joseph is a prosperous lakeshore community and ninety-five percent white, while Benton Harbor is impoverished and ninety-two percent black. When the body of a black teenaged boy from Benton Harbor is found in the river, unhealed wounds and suspicions between the two towns' populations surface as well. The investigation into the young man's death becomes, inevitably, a screen on which each town projects their resentments and fears. *The Other Side of the River* sensitively portrays the lives and hopes of the towns' citizens as they wrestle with this mystery--and reveals the attitudes and misperceptions that undermine race relations throughout America.

To meet the new and rapidly changing demands facing today's higher education managers and leaders – from department chairs to trustees – this book offers guidance on how to effectively discharge their responsibilities and how to develop their skills for managing their relationships with internal and external stakeholders. It also provides a broad understanding of the structure and functions of their institution and of the appropriate loci of decision-making. The authors go beyond the “positions” of leadership to emphasize the qualities of creativity, commitment, collaboration, delegation and courage that are essential to steer a unit, college or university through successful and enduring change. Recognizing that the hallmark of higher education in the United States is a diversity of institutional types, this book enables the reader to relate issues of environment, organization and management to his or her specific institution, from not only the presidential perspective, but from the vantage point of trustees, provosts, vice presidents, deans, and department heads. By covering all these functions—as well as the role of external stakeholders—in a single volume, this book offers readers a comprehensive view of how institutions respond to external forces and internal issues, and how these impact organizational structure, functions and decision-making in their roles, and the institution at large. The book is informed by these three essential principles: • Sound institutional decisions must be based on a clearly articulated mission and set of core values; • Successful institutional adaptation to a changed environment must be grounded and aligned with the fundamental mission and core values; and • Successful academic leaders must be able to create and foster partnerships, bringing diverse individuals and interests together around a shared vision and mission grounded in common values. This handbook is divided into five units. The first introduces the reader to the scholarly field of higher education and establishes the contextual framework for the rest of the book. The second investigates the multifaceted and often complex relationships that exist between institutions of higher learning and the external constituencies. The third focuses how college and university presidents and their board of trustees keep an institutional mission focused while adapting to changes in the environment, while the fourth analyzes how colleges and universities fulfill their core mission through shared democratic partnerships. The concluding unit concerns how effective academic leaders implement their institution's academic mission. Both scholarly and accessible, this book is intended to be of interest to a broad audience, ranging from graduate students in higher education administration programs to members of institutional governing boards, and everyone in leadership positions in between. All of the authors have completed graduate work in a higher education administration program, and collectively have had experience with academic administration at every level through to the university presidency. Two of the authors are currently faculty in leading higher programs teaching classes in administration and organizational theory and have published widely in the scholarly field. One has been a member of a governing board. Study questions suitable for leadership training and graduate courses are provided online. See hot link at top right of this page.

Written for Higher Education educators, managers and policy-makers, *Plagiarism, the Internet and Student Learning* combines theoretical understandings with a practical model of plagiarism and aims to explain why and how plagiarism developed. It offers a new way to conceptualize plagiarism and provides a framework for professionals dealing with plagiarism in higher education. Sutherland-Smith presents a model of plagiarism, called the plagiarism continuum, which usefully informs discussion and direction of plagiarism management in most educational settings. The model was developed from a cross-disciplinary examination of plagiarism with a particular focus on understanding how educators and students perceive and respond to issues of plagiarism. The evolution of plagiarism, from its birth in Law, to a global issue, poses challenges to international educators in diverse cultural settings. The case studies included are the voices of educators and students discussing the complexity of plagiarism in policy and practice, as well as the tensions between institutional and individual responses. A review of international studies plus qualitative empirical research on plagiarism, conducted in Australia between 2004-2006, explain why it has emerged as a major issue. The book examines current teaching approaches in light of issues surrounding plagiarism, particularly Internet plagiarism. The model affords insight into ways in which teaching and learning approaches can be enhanced to cope with the ever-changing face of plagiarism. This book challenges Higher Education educators, managers and policy-makers to examine their own beliefs and practices in managing the phenomenon of plagiarism in academic writing.

More people than ever are going to graduate school to seek a PhD these days. When they get there, they discover a bewildering environment: a rapid immersion in their discipline, a keen competition for resources, and uncertain options for their future, whether inside or outside of academia. Life with a PhD can begin to resemble an unsolvable maze. In *Behind the Academic Curtain*, Frank F. Furstenberg offers a clear and user-friendly map to this maze. a PhD outside of academia. From finding the right job to earning tenure, from managing teaching loads to conducting research, from working on committees to easing into retirement, he illuminates all the challenges and opportunities an academic can expect to encounter. Each chapter is designed for easy consultation, with copious signposts, helpful suggestions, and a bevy of questions that all academics should ask themselves throughout their career, whether at a major university, junior college, or a nonacademic organization. But what if there was a way to teach children how to manage priorities, focus on goals and be a positive influence on the world around them? The Leader in Me is that programme. It's based on a hugely successful initiative carried out at the A.B. Combs Elementary School in North Carolina. To hear the parents of A. B Combs talk about the school is to be amazed. In 1999, the school debuted a programme that taught The 7 Habits of Highly Effective People to a pilot group of students. The parents reported an incredible change in their children, who blossomed under the programme. By the end of the following year the average end-of-grade scores had leapt from 84 to 94. This book will launch the message onto a much larger platform. Stephen R. Covey takes the 7 Habits, that have already changed the lives of millions of people, and shows how children can use them as they develop. Those habits -- be proactive, begin with the end in mind, put first things first, think win-win, seek to understand and then to be understood, synergize, and sharpen the saw -- are critical skills to learn at a young age and bring incredible results, proving that it's never too early to teach someone how to live well.

Despite the increasing diversification of U.S. higher education, without intentional curricular planning by faculty, international students may not experience intercultural interactions due to varying degrees of disinterest, discomfort, or anxiety--and the interactions they do have may be superficial. These challenges could be potentially mitigated by an intentional curriculum that

complements and enhances English language instruction, such as Intercultural Skills in Action. Although traditional ESL/EFL textbooks have primarily introduced cultural topics at a knowledge level only, this textbook is designed to create meaningful opportunities for students to reflect on and practice intercultural skills in ways that are relatable in their daily lives and that can lead to a more satisfying U.S. academic experience. Each unit opens with a discovery activity that serves as a springboard for the unit and introduces the topic in an engaging way. Chapters feature academic content that expands knowledge of intercultural skills, plus opportunities for students to pause and reflect on how to apply what they are learning to their own intercultural experiences. The activities ask students to respond with short written reflections and practice oral skills through discussion in pairs and small groups. Each unit closes with an activity that requires students to use higher-order thinking skills to create, evaluate, and/or analyze cultural information gathered from college and university settings in the form of surveys, interviews, observations, or internet research and then report on what they have learned. The intended audiences for this book are international students studying in IEPs, in university bridge or pathway programs, or at colleges and universities in the United States. It may also be used by new-student orientation programs or by student services offices that provide intercultural training for students, staff, and faculty who work with international students.

Academic Culture is a much-needed and immensely practical book which identifies these attitudes and values as well as the effect they have on student and lecturer behaviour. Systematic Methods for Analyzing Culture is a practical manual that provides step-by-step instruction for collecting and analyzing cultural data. This compact guide explains complex topics in straightforward and practical terms, via research examples, textual and visual software guides, and hands-on exercises. Through each chapter's introductory examples, the manual illustrates how socially learned knowledge provides group members with shared understandings of the world, which allow for mutually intelligible interactions. The authors then carefully walk readers through the process of eliciting those socially learned, shared, and thus cultural representations of reality, which structure the thinking and practice of individuals inhabiting social groups. Specifically, the book shows how researchers can elicit such thought and behavior via methods such as free lists, pile sorts, cultural consensus and consonance analysis, textual analysis, and personal network research. The book will help both undergraduate and graduate students identify ways to unpack the "black box" of culture, which may be absent or given only cursory attention within their training and respective fields. The book's clear and systematic step-by-step walkthroughs of each method will also encourage more established researchers, educators, and practitioners—from diverse fields and with varying levels of experience—to integrate techniques for assessing cultural processes into their research, teaching, and practice.

At a time when American higher education seems ever more to be reflecting on its purpose and potential, we are more inclined than ever to look to its history for context and inspiration. But that history only helps, Paul H. Mattingly argues, if it's seen as something more than a linear progress through time. With *American Academic Cultures*, he offers a different type of history of American higher learning, showing how its current state is the product of different, varied generational cultures, each grounded in its own moment in time and driven by historically distinct values that generated specific problems and responses. Mattingly sketches out seven broad generational cultures: evangelical, Jeffersonian, republican/nondenominational, industrially driven, progressively pragmatic, internationally minded, and the current corporate model. What we see through his close analysis of each of these cultures in their historical moments is that the politics of higher education, both inside and outside institutions, are ultimately driven by the dominant culture of the time. By looking at the history of higher education in this new way, Mattingly opens our eyes to our own moment, and the part its culture plays in generating its politics and promise.
