Mastering the Art Managing Money is an unconventional book. It teaches that success in money matters is more art than science. The book begins with introductory lessons on why we all need to manage money properly. Chapter two reveals that the science of financial management is simply not enough. The role of emotions in financial decision making was x-rayed in addition to a presentation of different concepts of success. The main body of the

book focused on a series of five connected steps or phases of activity that is required for the mastery of money management matters.

The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractors of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads to determine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacture's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-speed blower (ECM or constant torque motor, or a true variable speed motor). Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material. This comprehensive code comprises all building, plumbing, mechanical, fuel gas and electrical requirements for one- and two-family dwellings and townhouses up to three stories. The IRC contains many important changes such as: An updated seismic map reflects the most conservative Seismic

Design Category (SDC) based on any soil type and a new map reflects less conservative SDCs when Site Class A, B or D is applicable. The townhouse separation provisions now include options for using two separate fire-resistant-rated walls or a common wall. An emergency escape and rescue opening is no longer required in basement sleeping rooms where the dwelling has an automatic fire sprinkler system and the basement has a second means of egress or an emergency escape opening. The exemption for interconnection of smoke alarms in existing areas has been deleted. New girder/header tables have been revised to incorporate the use of #2 Southern Pine in lieu of #1 Southern Pine. New tables address alternative wood stud heights and the required number of full height studs in high wind areas.

Air conditioning boosts man's efficiency no less than his comfort. Air-conditioned homes, offices, and factories unmistakably raise human productivity and reduce absenteeism, turnover, mistakes, accidents and grievances, especially in summer. Accordingly, many employers every year cool workrooms and offices to raise summer profits. Employees in turn find cool homes enhancing not only comfort and prestige but also personal efficiency and income. With such economic impetus, low-cost summer cooling must irresistibly spread to all kinds of occupied buildings. Refrigeration provides our best cooling, serving well where people are closely spaced in well-constructed, shaded, and insulated structures. However, its first and operating costs bar it from our hottest commercial, industrial, and residential buildings. Fortunately, evaporative cooling is an economical substitute in many regions. First used in Southwest homes and businesses and in textile mills, it soon invaded other fields and climates. In 1946, six firms produced 200,000 evaporative coolers; in 1958, 25 firms produced 1,250,000, despite the phenomenal sale of refrigerating window air conditioners. Though clearly secondary to refrigeration, evaporative cooling is 60 to 80 percent is economical for moderate income groups and cheaper to buy and operate. Thus, it climates where summers are short. Moreover, it cheaply cools hot, thinly constructed mills, factories, workshops, foundries,

Most people spend a good deal of time and a little more than half of their energy, money and resources in an effort to make their homes more efficient, for both themselves and the planet. But five days a week nearly all of America goes to work, and some spend almost as much time at their place of work as they do at home. With more than 30 million of these workplaces are small businesses, and 18,500 firms of 500 employees or more, the workplace is largely responsible for the other half of the consumption of resources in the United States. More and more people are becoming progressively interested and committed to contributing to the health and "greening" of their workplace, as well as the world at large. Although many people desire to do their part and play a role in the conservation of energy and resources at their workplace most think that it is harder to conserve at work due to circumstances beyond their control, and aren't aware of how, which or in what ways they can contribute to change. In order to inspire workers to engage in the lowering of the company's carbon footprint a company must know how to improve and implement change. Jeff Dondero tackles topics such as reorganizing thoughts about traditional ways of supervising employees, alternatives for offsetting carbon footprints, environmental effects businesses have on cities, smarter practices for recycling, and how to effectively use and audit resources. The Energy Wise Workplace provides practical suggestions and innovative ways for increasing the environmental and technological aspects of an efficient office, as well as improving productivity and work environment to keep employees happy and healthy and at the same time
