Ethical issues in the context of earnings management have been increasingly recognized as an important and controversial topic in accounting research. Prior literature has largely focused on this topic in Anglo-American countries. This research monograph focuses specifically on Germany, a country in which ethical issues in accounting have not been rigorously examined. Based on an evaluation of prior research, the monograph provides some theoretical and methodological suggestions to guide research on the controversial topics of accountants professional judgments and earnings management. Further, the influence of two relevant personality variables on professional accountants ethical judgments on earnings management is examined. The two personality variables selected, namely Construal of Self and Regulatory Focus Theory, provide sharper insights into accountants judgments at individual levels. This book also examines holier-than-thou perception bias among professional accountants and accounting students. Holier-than-thou perception bias refers to individuals perceiving themselves as being more ethical than their peers. This bias is an important issue in accounting contexts because it may foster an unethical organizational culture. Finally, the research monograph examines accountants judgments on whistle-blowing in the context of earnings management. Whistle-blowing as an internal control mechanism is useful in revealing illegal, immoral, or illegitimate practices such as earnings management. This research monograph contributes to accounting research by examining these ethical issues from various perspectives and by providing holistic insights incorporating literature from multiple disciplines such as history, sociology, psychology, and philosophy. The findings of this research monograph have implications for accounting ethics research, accounting firms, and accounting education. The findings also have implications for convergence in accounting and may be of interest for global standard-setters such as the International Ethics Standards Board for Accountants (IESBA) and the International Accounting Education Standards Board (IAESB).

?This book contains a collection of research papers on accounting information systems including their strategic role in decision processes, within and between companies. An accounting system is a complex system composed of a mix of strictly interrelated elements such as data, information, human resources, IT tool, accounting models and procedures. The revolutionary effects of using accounting information systems by displacing manual information systems in the private and public sectors cannot be overstated. The benefits of this substitution of set of processes include increased mathematical accuracy, predefined fields and coding tasks, and de-emphasis of manual clerical labor in favor of labor adept in data processing. Reporting can be significantly automated, facilitating managerial power and control at a distance and the proliferation of global enterprises. The potential detriments are rarely accurately, completely, and timely addressed as information system vendors, management consultants, and corporate procurement teams race toward the popularly conceived state of the art. Systems are ballyhooed as continually improving in processing speed, functionality, and capacity. Users of these automated systems may not consider big picture effects, and they may not intelligently consider the conduct risks to their own enterprises by concentrating such global reach and influence at high levels of senior management without dedicating adequate resources to verifying the accuracy, completeness, and timeliness of the information systems. This book considers these risks.
