Casebook in Accounting Information Systems bridges the gap between the theory and practice of accounting information systems analysis, design, and implementation.

Projects provide students with essential hands-on experience in most of the major activities associated with analyzing, designing, and implementing an accounting information system. Students must use analytical tools gained from other accounting classes to design the best system possible -- one that provides the most useful information to the right people, at the right time, and at a competitive price.

This text seeks to show the reader how to design and use an accounting information system (AIS) to provide information useful for decision-making. Focus boxes providing real world examples of concepts, techniques and practices as described are interspersed in the text. This edition has chapters on the three basic functions of the AIS together with an understanding of what the system does manually, and on data modelling, covering how students can use query language to derive traditional financial statements and managerial reports from a database AIS.

Accounting Information Systems 1e covers the four roles for accountants with respect to information technology: 1. Users of technology and information systems, 2. Managers of users of technology, 3. Designers of information systems, and 4.

Evaluators of information systems. Accountants must understand the organisation and how organisational processes generate information important to management.

Richardson's focus is on the accountant's role as business analyst in solving business problems by database modeling, database design, and business process modeling.

Unlike other texts that provide a broad survey of AIS related topics, this text concentrates on developing practical, real-world business analysis skills.

Provide the latest information in database development Focusing on what leading database practitioners say are the most important aspects to database development, Modern Database Management presents sound pedagogy, and topics that are critical for the practical success of database professionals.
