Financial Strategy for Public Managers is a new generation textbook for financial management in the public sector. It offers a thorough, applied, and concise introduction to the essential financial concepts and analytical tools that today's effective public servants need to know. It starts "at the beginning" and assumes no prior knowledge or experience in financial management. Throughout the text, Kioko and Marlowe emphasize how financial information can and should inform every aspect of public sector strategy, from routine procurement decisions to budget preparation to program design to major new policy initiatives. They draw upon dozens of real-world examples, cases, and applied problems to bring that relationship between information and strategy to life. Unlike other public financial management texts, the authors also integrate foundational principles across the government, non-profit, and "hybrid/for-benefit" sectors. Coverage includes basic principles of accounting and financial reporting, preparing and analyzing financial statements, cost analysis, and the process and politics of budget preparation. The text also includes several large case studies appropriate for class discussion and/or graded assignments.

Accounting software systems collect vast amounts of data about a company's economic events as well as its suppliers and customers. Business decision-makers take advantage of this wealth of data by using data analytics to gain insights and therefore make more informed business decisions. When a company is committed to growing through innovation - not just exploiting the existing business models - standard accounting documents offer insufficient and, oftentimes irrelevant data. Innovation Accounting is a practical guide for these

companies to help them measure and track innovation. Most established organizations have understood the need to innovate and become more digital, however the management tools available to leaders seeking to understand the investments in innovation are lacking. Financial accounting in particular is difficult to use in the context of (digital) innovation. Therefore a new complementary system for measuring and tracking innovation is needed. The book provides tools, frameworks, templates, and visualizations that can be easily understood and applied. These can all be used by executives looking for a new way of measuring corporate performance in a world where accounting-recognized assets are becoming commodities, by investors seeking better ways of looking at a company's growth potential, and by managers who need to value innovation product teams using more than just financial indicators. Innovation Accounting is an essential go-to book for anyone that wants to measure their company's innovation ecosystem.

This book is about accounting in an alternative libertarian socialist economic system. It explores what information and transactions we need to enable democratic and effective financial decisions by those affected by the decisions. Based on the economic model, participatory economics, the author proposes a set of accounting principles for an economy comprised of common ownership of productive resources, worker and consumer councils, and democratic planning, promoting the model's core values. The author tackles questions such as how accounting could be organised in an economy with no private equity owners or private lenders and creditors that is not based on greed and competition but instead on cooperation and solidarity. A large part of the book is focused on issues regarding investments; thus, he asks how and on what basis decisions are made about the allocation of an economy's production between consumption today and investments that enable more consumption in the future, and

how investments are accounted for. He also considers how investments in capital assets and production facilities would be decided, financed, and valued if they are not owned by private capital owners and if allocation does not take place through markets but through a form of democratic planning. In answering these questions and more, the author demonstrates that alternative economic systems are indeed possible, and not merely lofty utopias that cannot be put into practice, and inspires further discussion about economic vision. By applying accounting to a new economic setting and offering both technical information and the author's bold vision, this book is a comprehensive and valuable supplementary text for courses touching on critical accounting theory. It will also appeal to readers interested in alternative kinds of economies.

It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).

Integrated Reporting is having a profound impact on corporate thinking and reporting. Value is being assessed on the basis of the sources of value creation used by an organisation and not through a financial lens alone. In Chief Value Officer: Accountants Can Save the Planet, Mervyn King, a global corporate governance and reporting leader, challenges some of the systemic issues preventing organisations from managing in an integrated value-creation way. The shareholder-centric governance model, currently favoured by most companies, will not result in changes to corporate behaviour that can create value in a sustainable manner. The book, therefore, firmly places the accountant in the position of changemaker the finance professional today should be more of a value officer than a financial officer. Consequently, the Chief Finance Officer should be known as the Chief Value Officer. This book explains this new approach. It encapsulates the essential reasons for adopting integrated reporting, explains its application to date and proposes the next steps needed to achieve change that will improve business, social and environmental sustainability.
