Auditing: An International Approach (formerly titled Auditing and Other Assurance Engagements) presents a comprehensive, balanced, and current introduction to the auditing field. This text bridges the gap between students' knowledge of accounting principles and the professional practice of accounting and auditing in the working world. Emphasizing a 'cycles' approach, the book covers the financial auditor's decision-making process: 1) problem recognition and developing audit objectives, 2) evidence collection with audit procedures, and 3) making judgements about control risk and the fair presentation of financial statement assertions. Building on the strengths of the first Canadian and former U.S. editions, the authors reflect exciting challenges inherent to current auditing practice and other assurance services. As the revised title suggests, the second edition of this best-selling text has kept pace with the growing importance of International Accounting Standards in the context of Canadian business world. Global in scope, accounting has had its share of great thinkers and practitioners, from Luca Pacioli, the father of accounting, to R. J. Chambers, W. W. Cooper, Yuji Ijiri, Stephen A. Zeff and other figures. This encyclopedia presents more than 400 entries that focus on such subjects as publications in the field, institutional bodies, accounting and economic concepts, accounting issues, authors in accounting, records, leaders in the profession, accounting in various countries, financial court cases, accounting exams and historical researchers.

The first Canadian edition of Financial Accounting is based on two overarching principles: career relevance and the need to engage students of accounting.
