Management accounting that creates change resilience and enhances financial strength and profitability It has been one year and three months since WHO recognized the new coronavirus as a pandemic on March 11, 2020. The infection of the new coronavirus has spread all over the world, and the social and economic conditions of the globalized world have been severely damaged, and its vulnerabilities have been highlighted. - Deterioration of break-even point due to decrease in sales - Expanding the gap between management and on-site awareness due to the impact of the COVID-19 - Increasing number of internal frauds, fraudulent accounting of overseas subsidiaries, and inadequate internal control - Roadmap, goal setting and concrete measures for the realization of a carbon-free society Under these circumstances, what is most needed is the ability to respond to change by making use of hypotheses and verifications, in addition to the wisdom accumulated in the past, such as failure experiences and success experiences. In order to build a corporate structure that responds to change, it is necessary to manage change points by narrowing the pitch rather than managing goals. To that end, it is urgent to align the common operation cycle weekly, chain conventional management indicators (financial indicators and non-financial indicators), and manage the cockpit with the idea of ??the Balanced Scorecard. As an inventory-centric management consultant, I advocate management accounting that can be used as an immediate force by connecting the management team and the field. In particular, as an evangelist of CCC (cash conversion cycle) and IFC (inventory freshness management) based on the latest case studies of more than 100 Japanese, American and European companies, we explain to executives, business managers, practitioners and students in an easy-to-understand manner in this book. In addition to the decarbonized society, this book also mentions food issues, marine plastic issues, and clothing disposal issues as non-financial information. Accounts Receivable Management Best Practices John Wiley & Sons

Since the unprecedented financial crisis Lehman shock that occurred on 15th September 2008, the values of corporate management have been significantly changed from the profit and loss statement (P/L) to the balance sheet (B/S) and the cash flow (C/F). In order to cope with the increasing surplus bankruptcy and accounting fraud, strengthening cash management is an urgent issue. CCC (cash conversion cycle, cashing speed) is prevalent in Europe and the US, but in Japan it is not yet popular

except some companies. Rather than handling CCC as a simple financial indicator, we need to know what kind of practical knowledge is necessary to create corporate value, as relation to other management indicators as management accounting, and to connect CCC effectively to improvement activities. In addition, this book will explain about the problems in Japanese commercial practice and accounting system while comparing the latest CCC data between Japan and the US. Chapter 1 Now, why cash management is paying attention? (1) Profit is an opinion, Cash is a fact (2) Increasing surplus bankruptcy (3) Increasing Accounting Fraud Chapter 2 Management Accounting and Financial Accounting Chapter 3 CCC positioning and comparison between Japan and the United States (1) Key financial indicators (2) Positioning of CCC (3) CCC comparison between Japan and US (4) Sporting goods industry (5) Six major chemical companies in Japan Chapter 4 Measures to Improve CCC (1) The case of Nidec Motor (2) The case of HP, Inventory driven costs (IDC) (3) Japanese companies pursuing Inventory freshness / time-axis management (4) Japanese companies pursuing weekly operation (5) Lehman shock (2008) through 2012 (after 311 Earthquake and Thai Flood) Chapter 5 Management Methods, Promotion Structure and Required Systems and its usage (1) Cash cycle and lead time (2) Stock out rate (3) Channel inventory turns (4) Inventory responsibility, Inventory Dollar Control and Unit Control (5) Blind spots of accounts receivable management (6) Effective management methods (7) Effective system and its usage Chapter 6 Key issues in Japanese commercial practices and accounting system (1) Month-end closing and next month-end payment (2) Monthly accounting system

According to the Ito report announced by the Ministry of Economy, Trade and Industry in August 2014, it was pointed out that the issues of Japanese companies are not in asset turnover rates and financial leverage, but in terms of their ability to make earnings, compared to western companies. However, I believe that both accounts receivable turnover and inventory turnover are generally lower than those in Europe and the United States, among asset turnover rates, which is an issue for CCC (Cash Conversion Cycle) management. Inventory is an important management resource. Inventory is said to be a source of profit for business, at the

same time, to cause loss. Especially in manufacturing, retail and wholesale business, management indicators are used to measure whether product inventory is being converted into sales efficiently. In general, the following two are used. 1. Inventory turnover rate  
$$\text{Inventory turnover (times)} = \frac{\text{sales} \cdot \text{cost of sales (annual)}}{\text{inventory amount}}$$
The inventory turnover rate is mainly used by executives for presentations for investors or shareholders. 2. Inventory turnover period  
$$\text{Inventory turnover period} = \frac{\text{inventory amount}}{\text{sales or cost of sales (monthly or daily)}}$$
In fast-rotating industries such as foods, the daily sales are used for denominator and "days of stock days" is indicated. The inventory rotation period is practically used well. Annual average and month end stock are used for inventory, but the actual value for sales period / cost of sales is used for that period. It is enough to explain the past and current situation of inventory, but I think that it is inappropriate as an indicator for future decision-making internally. In other words, it is not inventory turnover as management accounting. I am convinced that inventory turnover days are an indicator that can assist decision-making to be shared by management, sales department in charge of operations, manufacturing, procurement, and logistics personnel as inventory-based management consultant.
