In Sticky Marketing Grant Leboff argued that the old marketing system of shouting messages at people was finished, replaced by providing value around your product or service: brands needed to become sticky. This new edition of Sticky Marketing, Stickier Marketing, remains a complete guide to producing effective marketing communications in a world of consumers empowered by new digital technology who do not want to be shouted at but engaged with. It shows readers how providing return on engagement, rather than return on investment, and a customer engagement point, rather than a unique selling point, is what will make the difference in today's cluttered marketing place. Updated throughout, this new edition also includes brand new chapters on content marketing, discovery and mobile marketing.

Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.

Case method teaching immerses students in realistic business situations--which include incomplete information, time constraints, and conflicting goals. The class discussion inherent in case teaching is well known for stimulating the development of students' critical thinking skills, yet instructors often need guidance on managing that class discussion to maximize learning. Teaching with Cases focuses on practical advice for instructors that can be easily implemented. It covers how to plan a course, how to teach it, and how to evaluate it. The book is organized by the three elements required for a great case-based course: 1) advance planning by the instructor, including implementation of a student contract; 2) how to make leading a vibrant case discussion easier and more systematic; and 3) planning for student evaluation after the course is complete. Teaching with Cases is ideal for anyone interested in case teaching, whether basing an entire course on cases, using cases as a supplement, or simply using discussion facilitation techniques. This is a collection of philosophical essays of interest to the author in the present social reality of the United States. Examination of ordinary political issues, cosmology, economics, social phenomena and philosophical interests comprise the content of the essays. Individual actualization of ideas in the present, factual universe need be thoughtful such that logic conformal to the Biblical "be as gentle as a dove and wise as the serpent", guides one's path. Gary C. Gibson, presently in favor of an evolution of a priesthood of believers to replace the hierarchical priesthood as was seemingly a mission point of Jesus Christ, investigates philosophical topics, science and faith from a comprehensive, analytical, viewpoint without academic bias.

Connected is a thrilling journey through the physical side of the virtual world. Everyone is familiar with the internet and will check their email without a second thought, but who knows how the messages get from one place to another and what processes the data goes through during the trip? Imagine yourself as a digital bit--the basic unit of information--and join the other billions of bits as they race through cyberspace. Trace their routes under seas, across continents, and through space, zooming through beaches, buildings, roads, and pipelines as information crosses the globe. Marvel at the technology that keeps you connected, from the ships installing lines deep in the ocean, to the robots locating wire breaks, the satellites beaming signals across the earth, the teams retrieving and splicing lines together, and the servers directing and feeding internet traffic around the world. The book also takes a look back at the history of the internet, exploring the people and inventions that led to its creation. In this section, you'll tour a virtual museum to see how the technology has progressed over the years, changing the lives of ordinary people everywhere.

Most Christians have it all mixed up about Jesus Christ and the church out of Peter's rock. For James Robert Sabolick, the truth and the way started quite inconspicuously. It all started at Fort Pitt Bridge in 1976. Since then, his life had been nothing but an unending shredding of sinful ways, revelations through dreams and messages out of distinct events in his life and family members. There were those countless times he had drowned in alcohol and attempted to end his life while in the US Navy. A marriage brought forth the death of a son a few days after birth. Yet, not even the end of the marriage and life on the streets of Florida could sway his growing faith, which started in 1976 all the way to Mount Olives to bury his covenant, a Hebrew bullet, on the way to Mount Tsijon (Zion).

Rapid advances in computer technology and the internet have created new opportunities for delivering instruction and revolutionizing the learning environment. This development has been accelerated by the significant reduction in cost of the Internet infrastructure and the easy accessibility of the World Wide Web. This book evaluates the usefulness of advanced learning systems in delivering instructions in a virtual academic environment for different engineering sectors. It aims at providing a deep probe into the most relevant issues in engineering education and digital learning and offers a survey of how digital engineering education has developed, where it stands now, how research in this area has progressed, and what the prospects are for the future.
