Biotechnological Progress and Beverage Consumption, Volume 19 in the Science of Beverages series, presents a scientific resource that discusses current and emerging advancements in technologies and novel applications to help researchers understand and apply the latest techniques to improve beverages. This reliable reference explores how beverages have been improved through biotechnology and provides technical information to improve professional development in a competitive market. Topics include a broad range of trends where some of the most advancements have been made, including improvements in bioactive concentration, probiotics, green technologies in fermentation, and in clarification processes. - Provides technical aspects of bioprocesses for a deeper understanding of product creation - Presents modeling and simulation examples for quality control and safety of fermented beverages - Includes research methods and analysis to improve product development including texture and flavor

Science and Technology of Fruit Wine Production Maria R. Kosseva, V.K. Joshi, P.S. Panesar, 2016-11-01
Science and Technology of Fruit Wine Production includes introductory chapters on the production of wine from fruits other than grapes, including their composition, chemistry, role, quality of raw material, medicinal values, quality factors, bioreactor technology, production, optimization, standardization, preservation, and evaluation of different wines, specialty wines, and brandies. Wine and its related products have been consumed since ancient times, not only for stimulatory and healthful properties, but also as an important adjunct to the human diet by increasing satisfaction and contributing to the relaxation necessary for proper digestion and absorption of food. Most wines are produced from grapes throughout the world, however, fruits other than grapes, including apple, plum, peach, pear, berries, cherries, currants, apricot, and many others can also be profitably utilized in the production of wines. The major problems in wine production, however, arise from the difficulty in extracting the sugar from the pulp of some of the fruits, or finding that the juices obtained lack in the requisite sugar contents, have higher acidity, more anthocyanins, or have poor fermentability. The book demonstrates that the application of enzymes in juice extraction, bioreactor technology, and biological de-acidification (MLF bacteria, or de-acidifying yeast like *Schizosaccharomyces pombe*, and others) in wine production from non-grape fruits needs serious consideration. - Focuses on producing non-grape wines, highlighting their flavor, taste, and other quality attributes, including their antioxidant

properties - Provides a single-volume resource that consolidates the research findings and developed technology employed to make wines from non-grape fruits - Explores options for reducing post-harvest losses, which are especially high in developing countries - Stimulates research and development efforts in non-grape wines

Chemistry and Biology of Winemaking Ian S Hornsey, 2015-10-09 Someone once said that 'wine is a mixture of chemistry, biology and psychology'. It has certainly fascinated people over the centuries and without a doubt been enjoyed by many. Indeed, from its serendipitous roots as an attempt to store fruit, wine has been woven into the fabric of society; from its use in religion to today's sophisticated products sampled over a meal. The Chemistry and Biology of Winemaking not only discusses the science of winemaking but also aims to provide the reader with a wider appreciation of the impact of oenology on human society. Beginning with a history of wine the book discusses a wide range of topics, with particular emphasis on the organisms involved. Starting with the role of yeast in fermentation, it goes on to discuss so-called 'killer yeasts', lactic acid bacteria and the role that genetically modified organisms may have in the future. This book is ideal for anyone interested in the process of winemaking and will be of particular use for those with an interest in the chemical and biological sciences.

The Therapeutic, Nutritional and Cosmetic Properties of Donkey Milk Paolo Polidori, Silvia Vincenzetti, 2019-09-25 This book explores the potential beneficial health effects of donkey milk, and provides valid scientific evidence for a better appraisal of this product. Milk is the most complete natural food available and is a basic ingredient of the human diet for both children and adults. Milk produced by all mammals contains basically the same nutrients, but considering the differences in nutritional requirements, milk's chemical composition differs in each mammalian species. The use of donkey milk in human nutrition has been known from the Roman age. Recent clinical trials have tested it as a possible replacement for dairy cows milk in infants affected by cow milk protein allergy. The results have clearly demonstrated that donkey milk's chemical and nutritional properties are very similar to those determined in human milk. This book will appeal to pediatricians, allergists, and nutritionists, as well as farmers and veterinarians.

Objective Question Bank GENERAL SCIENCE Arihant Experts, 2014-12-01 The General Science section covering Physics, Chemistry, Biology and Computer Science has taken an important dimension in most of the competitive examinations like SSC, CDS, NDA, Assistant Commandant, CPO, UPSC and State Level PSC Exams and those lacking the basic General Science knowledge lag behind others in the long run. The present book will act as an Objective Question Bank for General Science. The book has been prepared keeping in mind the importance of the subject. This book has been divided into four sections namely Physics, Chemistry, Biology and Computer Science, each divided into number of chapters as per the syllabi of General Science section asked in various competitive exams. The Physics section covers Motion, Force & Laws of Motion, Gravitation, Work, Energy & Power, Simple Harmonic Motion, Wave Motion, Light-Ray Optics, Current Electricity & Its Effects, Nuclear Physics, Semiconductor, Communication, etc whereas the Chemistry section has been divided into Atomic Structure, Chemical Reactions, Chemical Bonding, Solutions & Colloids, Energetics & Kinetics, Electrochemistry, Metallurgy, Metals & Their Compounds, Flame & Fuel, Food Chemistry, etc. The Biology section in the book covers Biology & Its Branches, Cell: Structure & Functions, Cell Cycle & Cell Division, Plant Tissues, Animal Nutrition, Plant System, Reproduction in Organisms, Respiratory System, Excretory System, Reproductive System, Genetics, Biotechnology, Animal Husbandry, etc whereas the Computer Awareness section has been divided into Computer Organisation & Memory, Data Representation, Software, Data Communication Networking and Internet & Computer Security. The chapters in the book contain more than 100 tables which will help in better summarization of the important information. Each chapter in the book contains ample number of objective questions ample number of objective questions including questions asked in previous years' exams which have been designed on the lines of questions asked in various competitive examinations. With a collection of more than 5000 highly useful questions, the content covered in the book tries to simplify the complexities of some of the topics so that non-science students feel no difficulty while studying general science. Also hints and solutions to the difficult questions have been provided in the book. As the book thoroughly covers the General Science section asked in a number of competitive examinations, it for sure will work as a preparation booster for various competitive examinations like UPSC & State Level PSCs Examinations, SSC, CDS, NDA, CISF and other general competitive & recruitment examinations.

Non-Thermal Processing Technologies for the Grain Industry M. Selvamuthukumaran, 2021-08-18 Food can rapidly spoil

due to growth of microorganisms, and traditional methods of food preservation such as drying, canning, salting, curing, and chemical preservation can affect the quality of the food. Nowadays, various non-thermal processing techniques can be employed in grain processing industries to combat this. They include pulsed electric field processing, high pressure processing, ultrasonic processing, cold plasma processing, and more. Such techniques will satisfy consumer demand for delivering wholesome food products to the market. **Non-Thermal Processing Technologies for the Grain Industry** addresses these many new non-thermal food processing techniques that are used during grain processing and minimize microbial contamination and spoilage. **Key Features:** Explains the mechanism involved in application of cold plasma techniques for grain processing, and its strategy for inactivation of microbes by using this technique Deals with the effect of incorporation of electric pulses on quality aspects of various grain based beverage products. Details the innovative high pressure processing techniques used for extraction of antioxidant from food grains Explores the safety issues and applications of non-thermal food processing techniques This book will benefit food scientists, food process engineers, academicians, students, as well as anyone else in the food industry by providing in-depth knowledge and emerging trends about non-thermal processing techniques in various grain-based food processing industries.
