Full of practical examples, Introduction to Scheduling presents the basic concepts and methods, fundamental results, and recent developments of scheduling theory. With contributions from highly respected experts, it provides self-contained, easy-to-follow, yet rigorous presentations of the material. The book first classifies scheduling problems and their complexity and then presents examples that demonstrate successful techniques for the design of efficient approximation algorithms. It also discusses classical problems, such as the famous makespan minimization problem, as well as more recent advances, such as energy-efficient scheduling algorithms. After focusing on job scheduling problems that encompass independent and possibly parallel jobs, the text moves on to a practical application of cyclic scheduling for the synthesis of embedded systems. It also proves that efficient schedules can be derived in the context of steady-state scheduling. Subsequent chapters discuss scheduling large and computer-intensive applications on parallel resources, illustrate different approaches of multi-objective scheduling, and show how to compare the performance of stochastic task-resource systems. The final chapter assesses the impact of platform models on scheduling techniques. From the basics to advanced topics and platform models, this volume provides a thorough introduction to the field. It reviews classical methods, explores more contemporary models, and shows how the techniques and algorithms are used in practice.

Your next appointment may be causing you to be tougher than it actually is.1 For you, you may be thinking you have many responsibilities to take care of. However, that your thoughts will likely focus on just one or two things with the end in mind. Being overwhelmed for your first appointment can cause you anxiety and nervousness. Perhaps for the first Appointment It's time to take some time to sit down and write your appointment. Use this time to reflect on your thoughts. Make a list of everything you are feeling and how you feel about it. You have your doctor or health care provider. You will want to write down how you feel about your life and how it is affected by your health. This is a helpful first step. For example, your list may include: - I have to work to the point where babies are crying because I can't take the noise. - I don't know how people are when they say things. - I don't get very angry, to the point of rage. (If there are patterns to things that trigger your anger, include them.) Several friends are angry because I have become increasingly angry. - I feel very lonely and have no extra support. As a result, I spend a lot of time being angry. - I don't get a full night's sleep, I am sleeping 18 hours a day. What are your habits or routines now, include this information in your list. - Something that makes me angry and I don't seem to feel it. If you're feeling paranoid, you need to list not just the feelings, but what you feel paranoid about and how it affects your life. Let's see what you're feeling and what's going on and how your life is affected. Watch the Labels Don't put labels on your feelings or thoughts. Let's see what you're doing. This could inadvertently be influenced by your behavior, which could affect your diagnosis. Taking this approach to the health that your feelings will misguide the therapist, but don't make the whole process much easier for you. On the other hand, writing down or thinking about exact feelings and what's going on. You have had, you'll know if you find that this is much simpler and easier than trying to give them names and label them. If you find your feelings are not what you think, take a break. Make sure you are simply writing down your feelings and not trying to find what's going on, patterns, or a diagnosis. What a List is Helpful for the First Appointment When you break down your feelings and how they affect your life, you get a very clear picture for the doctor. It's very difficult to do that in the spot in a short visit when your brain is not prepared, so make the list ahead of time. At the same time, don't worry too much if you haven't listed absolutely everything you're feeling or what's going on. Therapy usually takes time, and this first visit is laying a foundation that you can build on.

We revisit Lipset's law, which posits a positive and significant relationship between income and democracy. Using dynamic and heterogeneous panel data estimation techniques, we find a significant and negative relationship between income and democracy: higher/lower incomes per capita hinder/trigger democratization. Decomposing overall income per capita into its resource and non-resource components, we find that the coefficient on the latter is positive and significant while that on the former is significant but negative, indicating that the role of resource income is central to the result.

A classic text about the social study of food, this is the first English language edition of Jean-Pierre Poulain's seminal work. Tracing the history of food scholarship, The Sociology of Food provides an overview of sociological theory and its relevance to the field of food. Divided into two parts, Poulain begins by exploring the continuities and changes in the modern diet. From the effect of globalization on food production and supply, to evolving cultural responses to food – including cooking and eating practices, the management of consumer anxieties, and concerns over obesity and the medicalization of food – the first part examines how changing food practices have shaped and are shaped by wider social trends. The second part provides an overview of the emergence of food as an academic focus for sociologists and anthropologists. Revealing the obstacles that lay in the way of this new field of study, Poulain shows how the discipline was first established and explains its development over the last forty years. Destined to become a key text for students

and scholars, *The Sociology of Food* makes a major contribution to food studies and sociology. This edition features a brand new chapter focusing on the development of food studies in the English-speaking world and a preface, specifically written for the edition.

The spiritual leader of Eckankar tells stories about small miracles and gifts from God that happen in everyday life--the spiritual good news of today--as he helps readers see the deeper truths from within and apply them to life now.

The Inner-Self centers on Keith Denton as he moves through a series of experiences, virtually going from his idea of a pinnacle to nearly ending his own life.

Building Evaluation Capacity provides 72 activities for learning how to design and conduct evaluation studies. These activities address the entire evaluation process. Each activity includes an overview, instructional objectives, time estimates, materials needed, handouts, and procedures for effectively using the activity, whether there are a few participants or an unlimited number in small groups. To help the reader locate specific kinds of activities, the book includes a chart that names the activity, the time needed to implement the activity, and whether background information or knowledge is required prior to implementing the activity. The book also includes several strategies for forming groups and a glossary of instructional strategies.

One problem with helicoptering is that there are virtually no flying clubs, at least of the sort that exist for fixed wing, so pilots get very little chance to swap stories, unless they meet in a muddy field somewhere, waiting for their passengers. As a result, the same mistakes are being made and the same lessons learnt separately instead of being shared - it's comforting sometimes to know that you're not the only one to inflate the floats by accident! Even when you do get into a school, there are still a couple of things they don't teach you, namely that aviation runs on paperwork, and how to get a job, including interview techniques, etc - flying the aircraft is actually less than a third of the job. Another is that nobody really tells you anything, either about the job you have to do (from the customer) or how to do it (the company) - you will always be up against the other guy who managed to do it last week! Sure, there will be training, but, even in the best companies, this will be relatively minimal. This book is an attempt to correct the above situations by gathering together as much information as possible for helicopter pilots, old and new, professional and otherwise, in an attempt to explain the why, so the how will become easier (you will be so much more useful if you know what the customer is trying to achieve). In short, this is all the stuff nobody taught me - every tip and trick I have learnt has been included.

Every night, Shahrazad begins a story. And every morning, the Sultan lets her live another day -- providing the story is interesting enough to capture his attention. After almost one thousand nights, Shahrazad is running out of tales. And that is how Marjan's story begins.... It falls to Marjan to help Shahrazad find new stories -- ones the Sultan has never heard before. To do that, the girl is forced to undertake a dangerous and forbidden mission: sneak from the harem and travel the city, pulling tales from strangers and bringing them back to Shahrazad. But as she searches the city, a wonderful thing happens. From a quiet spinner of tales, Marjan suddenly becomes the center of a more surprising story than she ever could have imagined.

In early 1781, after his victories in the Southern Colonies, Lord Cornwallis marched his army north into Virginia. He believed the Americans could be decisively defeated in Virginia and the war brought to an end. George Washington believed Cornwallis's move was a strategic blunder, and he moved vigorously to exploit it. Feinting against General Clinton and the British stronghold of New York, Washington marched his army quickly south. With the assistance of Rochambeau's infantry and a key French naval victory at the Battle off the Capes in September, Washington trapped Cornwallis on the tip of a narrow Virginia peninsula at a place called Yorktown. And so it began. Operating on the belief that Clinton would arrive with reinforcements, Cornwallis confidently remained within Yorktown's inadequate defenses. Determined that nothing short of outright surrender would suffice, his opponent labored day and night to achieve that end.

Washington's brilliance was on display as he skillfully constricted Cornwallis's position by digging entrenchments, erecting redoubts and artillery batteries, and launching well-timed attacks to capture key enemy positions. The nearly flawless Allied campaign sealed Cornwallis's fate. Trapped inside crumbling defenses, he surrendered on October 19, 1781, effectively ending the war in North America.

Entrepreneurship, by Robert Hisrich, Michael Peters and Dean Shepherd has been designed to clearly instruct students on the process of formulating, planning, and implementing a new venture. Students are exposed to detailed descriptions of 'how to' embark on a new venture in a logical manner. Comprehensive cases at the end of the text have been hand-picked by the authors to go hand-in-hand with chapter concepts. The superb author team of Hisrich, Peters, and Shepherd draw from their distinct backgrounds to create a book that addresses the dynamics of today's entrepreneurial challenges. From Bob Hisrich's expertise in global entrepreneurship to Mike Peter's background as a both a real-life entrepreneur and academic to Dean Shepherd's current research on cognition and entrepreneurial mindset, this book balances the crucial line between modern theory and practice.

Kevin Bartlett played 403 games for the Richmond Football Club and was one of its biggest stars during a golden era of five premierships in 13 years, who parted the club amid tremendous acrimony and did not return for more than 15 years.

Understand how to use equity market metrics such as the price/earnings ratio (and other multiples) to value public and private enterprises. This essential book gives you the tools you need to identify and qualify investments and assess business strategy and performance. Author George Calhoun, Founding Director of the Quantitative Finance Program at Stevens Institute of Technology, shows you how to use metrics to appraise mergers, acquisitions, and spin-offs. You will be able to shed light on financial market conditions, benchmark fair value assessments, and check and calibrate complex cash flow models. Market multiples share a peculiar construction: they are based on an explicit apples-to-oranges comparison of market prices with accounting fundamentals, combining data derived from two very different sources and methodologies. This creates ambiguities in interpretation that can complicate the application of these metrics for the many purposes. Multiples are thus easy to construct, but they can be difficult to interpret. The meanings of certain multiples have evolved over time, and new-and-improved versions have been introduced. The field is becoming more complex and the question of which metrics perform best can be a source of controversy. What You Will Learn Know the definitions, interpretations, and applications of all major market ratios, including: price/earnings (trailing and forward), cyclically adjusted price/earnings, cash-adjusted price/earnings, EV/EBITDA, price/sales, dividend yield, and many more Examine the factors that drive the values of ratios from firm level (such as earnings growth, leverage, and governance) to market level (such as inflation, tax and fiscal policy, monetary policy, and international characteristics) Apply metrics in: investment analysis, index construction, factor models, sum-of-the-parts analysis of corporate structures, and detection of asset bubbles Who This Book Is For Professionals at all levels working in the finance industry, especially in fields related to investment management, trading, and investment banking who are involved with valuation and assessing and advising on corporate transactions and interpreting market trends, and university students in finance-related programs at the undergraduate and graduate levels

Metal matrix composites are making tangible inroads into the "real" world of engineering. They are used in engineering components such as brake rotors, aircraft parts, combustion engines, and heat sinks for electronic systems. Yet, outside a relatively limited circle of specialists, these materials are mostly unknown. Designers do not as a rule think of using these materials, in part because access to information is difficult as these materials have not really entered engineering handbooks. Metal Matrix Composites in Industry is thus useful to engineers who wish to gain introductory knowledge of these materials and who want to know where "to find" them. Additionally, it provides researchers and academics with a survey of current industrial activity in this area of technology.
