An expert in cognitive development and music education reveals the remarkable and surprising benefits that playing--or even appreciating--music offers to children. The latest cognitive research has revealed something extraordinary: learning music and listening to music can grow and repair our brains at any age. Here, Dr. Anita Collins explains how music has the potential to positively benefit almost all aspects of a child's development, whether it's through formal education or mindful appreciation; simply clapping in time can assist a young child who is struggling with reading. It turns out that playing music is the cognitive equivalent of a full-body workout. Dr. Collins lays out the groundbreaking research that shows how playing an instrument can improve language abilities, social skills, concentration, impulse control, emotional development, working memory, and planning and strategy competence, from infancy through adolescence. She also provides real-life stories to show the difference that music learning can make, as well as practical strategies for parents and educators to encourage a love of music in their kids.
