Designed for photographers who already have strong diving skills and understand basic photographic techniques, this reference defines what advanced underwater photography is while teaching the skills necessary to create professional-quality images. Opening with a quick overview of the basics—such as exposure, focus, subject selection, and composition—the author then expands on each of these topics, showing the techniques pros use to achieve truly stunning images. A major factor in advancing beyond the basic level of underwater photography is moving from a point-and-shoot or semi-adjustable camera to using a full-featured digital SLR camera. The myriad equipment choices available when making this transition—including cameras, lenses, underwater housings, and the lighting units designed to be used with them—are explained, as are their respective advantages and shortcomings. Because both beginning and advanced underwater photographers can have equipment-related issues, a trouble-shooting section is included to ensure that minor equipment problems

won't ruin a costly dive trip.

An increasing reliance on automatic exposure modes means that, for many digital photographers, exposure starts and ends at /8 and 1/125 sec. Theres nothing wrong with this, but theres a point when this sensible combination becomes formulaic boring even and countless photographers have lost sight of their cameras true creative potential. With inspirational photography throughout, Extreme Exposure is the antithesis to this, setting out to liberate the enthusiast photographer. Covering the further ends of the exposure scale, this book explores the way in which cameras work both their limitations and potential before detailing how exposure can be used in a creative (and technical) fashion. Whether its extending the shutter speed to capture stunning star trails, or fitting a manual focus lens to benefit from the wide apertures that are lost on todays DSLRs, Extreme Exposure looks at the fundamental elements of picture-making in a refreshing and highly inspirational light.
