Few Pacific history books have stood the test of time as well as *They Came for Sandalwood*, but Dorothy Shineberg's book, first published in 1967, has never been bettered. This fascinating account of the sandalwood trade describes the first regular contact between Europeans and the Melanesians of New Caledonia, the Loyalty Islands, and the New Hebrides (now Vanuatu). Shineberg studied the relationships and rivalries between European traders and European missionaries, between trader and trader, and between tribe and tribe among the indigenous peoples. Her book documents the details and color of these interactions. Unseaworthy ships, bloody battles, the hazards of sea and reef, and the firepower and inadequacies of European weapons all provide a gripping picture of the 1830s to 1860s. Valuable appendices list the ships involved, their cargoes and the location of the sandalwood stations. *They Came for Sandalwood* remains the only detailed account of the sandalwood trade, its routes, marketing problems and profits, and of the ships, merchants and seamen involved. It is a sharp, perceptive analysis of the confrontation of the two cultures, approached from the standpoint of Pacific history rather than a mere extension of European history into the Pacific Islands.

This book is an introduction to Max Weber's ambitious comparative study of the sociological and institutional foundations of the modern economic and social order. In this work originally published in German in 1920, Weber discusses the analytical methods of sociology and, at the same time, presents a devastating critique of prevailing sociological theory and of its universalist, determinist underpinnings. None of Weber's other writings offers the reader such a grasp of his theories; none displays so clearly his erudition, the scope of his interests, and his analytical powers.

In an era of market triumphalism, this book probes the social and environmental consequences of market-linked nature conservation schemes. Rather than supporting a new anti-market orthodoxy, Charles Zerner and colleagues assert that there is no universal entity, "the market." Analysis and remedies must be based on broader considerations of history, culture, and geography in order to establish meaningful and lasting changes in policy and practice. Original case studies from Asia, Latin America, Africa, and the South Pacific focus on topics as diverse as ecotourism, bioprospecting, oil extraction, cyanide fishing, timber extraction, and property rights. The cases position concerns about biodiversity conservation and resource management within social justice and legal perspectives, providing new insights for students, scholars, policy professionals and donor/foundations engaged in international conservation and social justice. This best-selling text is still the most modern presentation of the subject. The Varian approach gives students tools they can use on exams, in the rest of their classes, and in their careers after graduation.

The financial system is a densely interconnected network of financial intermediaries, facilitators, and markets that serves three major purposes: allocating capital, sharing risks, and facilitating intertemporal trade. Asset prices are an important mechanism in each of these phenomena. Capital allocation, whether through loans or other forms of investment, can vary both across sectors-at the broadest, manufactures, agriculture, and services-and within sectors, for example different firms. The risk that various investors are willing to take reflects their financial position and alternative opportunities. Risk and asset allocation are also influenced by whether money, and especially its expenditure, is more important now or in the future. These decisions are all influenced by governmental policies. When there are mismatches, the results include financial meltdowns, fiscal deficits, sovereign debt, default and debt crises. Harold L. Cole provides a broad overview of the financial system and assets pricing, covering history,

institutional detail, and theory. The book begins with an overview of financial markets and their operation and then covers asset pricing for standard assets and derivatives, and analyzes what modern finance says about firm behavior and capital structure. It then examines theories of money, exchange rates, electronic payments methods, and cryptocurrencies. After exploring banks and other forms of financial intermediation, the book examines the role they played in the Great Recession. Having provided an overview of the private sector, Cole switches to public finance and government borrowing as well as the incentives to monetize the public debt and its consequences. The book closes with an examination of sovereign debt crises and an analysis of their various forms. Finance and financial intermediation are central to modern economies. This book covers all of the material a sophisticated economist needs to know about this area.

"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure.
