This supplement is appropriate for use in an advanced engineering mathematics course (including differential equations, numerical analysis, linear algebra, partial differential equations and complex analysis) where the computer algebra system MAPLE is used as a teaching tool. U.S. agriculture is very vulnerable to attack through animal, plant, or zoonotic pathogens; one attack could affect an entire sector of the food chain. Rich with alarming yet elucidating scenarios/vignettes of potential threats to the Agriculture system, *Threats to Agriculture: A Strategic National Security Asset* defines agroterrorism and provides examples of attack through animal pathogens, human pathogens, and zoonotic pathogens. The book provides Homeland Security and FEMA professionals, state and local emergency managers, security consultants, and agricultural engineers with recommended actions for prevention and mitigation to protect agricultural resources.

With a growing range of applications in fields from computer science to chemistry and communications networks, graph theory has enjoyed a rapid increase of interest and widespread recognition as an important area of mathematics. Through more than 20 years of publication, *Graphs & Digraphs* has remained a popular point of entry to the field, and through its various editions, has evolved with the field from a purely mathematical treatment to one that also addresses the mathematical needs of computer scientists. Carefully updated, streamlined, and enhanced with new features, *Graphs & Digraphs, Fourth Edition* reflects many of the developments in graph theory that have emerged in recent years. The authors have added discussions on topics of increasing interest, deleted outdated material, and judiciously augmented the Exercises sections to cover a range of problems that reach beyond the construction of
