

Advances In Materials And Processing Technologies Xv Selected Peer Reviewed Papers From The 15th International Conference On Advances In Materials September 23 2 Materials Science Forum

Finish Manufacturing Processes are those final stage processing techniques which are deployed to bring a product to readiness for marketing and putting in service. Over recent decades a number of finish manufacturing processes have been newly developed by researchers and technologists. Many of these developments have been reported and illustrated in existing literature in a piecemeal manner or in relation only to specific applications. For the first time, Comprehensive Materials Finishing integrates a wide body of this knowledge and understanding into a single, comprehensive work. Containing a mixture of review articles, case studies and research findings resulting from R & D activities in industrial and academic domains, this reference work focuses on how some finish manufacturing processes are advantageous for a broad range of technologies. These include applicability, energy and technological costs as well as practicability of implementation. The work covers a wide range of materials such as ferrous, non-ferrous and polymeric materials. There are three main distinct types of finishing processes: Surface Treatment by which the properties of the material are modified without generally changing the physical dimensions of the surface; Finish Machining Processes by which a small layer of material is removed from the surface by various machining processes to render improved surface characteristics; and Surface Coating Processes by which the surface properties are improved by adding fine layer(s) of materials with superior surface characteristics. Each of these primary finishing processes is presented in its own volume for ease of use, making Comprehensive Materials Finishing an essential reference source for researchers and professionals at all career stages in academia and industry. Provides an interdisciplinary focus, allowing readers to become familiar with the broad range of uses for materials finishing Brings together all known research in materials finishing in a single reference for the first time Includes case studies that illustrate theory and show how it is applied in practice

Volume is indexed by Thomson Reuters CPCI-S (WoS). Collection of selected, peer reviewed papers from the 2013 4th International Conference on Advances in Materials and Manufacturing (ICAMMP 2013), 18-19 December, 2013, Kunming, China. The 268 papers are grouped as follows: Chapter 1: Composites, Chapter 2: Micro/Nano Materials, Chapter 3: Steel/Iron, Chapter 4: Ceramics, Chapter 5: Metal Alloy Material, Chapter 6: Optical / Electrical / Magnetic Materials, Chapter 7: Energy Materials, Chapter 8: Biomaterials and Technology, Chapter 9: Chemical Materials, Chapter 10: Film Material, Chapter 11: Building Materials, Chapter 12: Materials Mechanical Behavior and Fracture, Chapter 13: Materials Physics and Chemistry, Chapter 14: Selection, Testing and Evaluation of Materials, Chapter 15: Surface Engineering / Coatings Technology, Chapter 16: Material Forming, Chapter 17: Material Machining, Chapter 18: Welding and Joining, Chapter 19: Materials Processing Technologies

This book presents select proceedings of the International Conference on Engineering Materials, Metallurgy and Manufacturing (ICEMMM 2018), and covers topics regarding both the characterization of materials and their applications across engineering domains. It addresses standard materials such as metals, polymers and composites, as well as nano-, bio- and smart materials. In closing, the book explores energy, the environment and green processes as related to materials engineering. Given its content, it will prove valuable to a broad readership of students, researchers, and professionals alike.

Volume is indexed by Thomson Reuters CPCI-S (WoS). This volume is devoted to all the manufacturing engineers that work in Integrated development of products and processes, Machining processes, Forming processes and Non-traditional manufacturing processes. Thereby, this issue contains peer reviewed selected contributions on the aforementioned fields, showing the most recent advances in the most innovative trends in Materials Processing Technologies.

The manufacturing processes of composite materials are numerous and often complex. Continuous research into the subject area has made it hugely relevant with new advances enriching our understanding and helping us overcome design and manufacturing challenges. Advances in Composites Manufacturing and Process Design provides comprehensive coverage of all processing techniques in the field with a strong emphasis on recent advances, modeling and simulation of the design process. Part One reviews the advances in composite manufacturing processes and includes detailed coverage of braiding, knitting, weaving, fibre placement, draping, machining and drilling, and 3D composite processes. There are also highly informative chapters on thermoplastic and ceramic composite manufacturing processes, and repairing composites. The mechanical behaviour of reinforcements and the numerical simulation of composite manufacturing processes are examined in Part Two. Chapters examine the properties and behaviour of textile reinforcements and resins. The final chapters of the book investigate finite element analysis of composite forming, numerical simulation of flow processes, pultrusion processes and modeling of chemical vapour infiltration processes. Outlines the advances in the different methods of composite manufacturing processes Provides extensive information on the thermo-mechanical behavior of reinforcements and composite prepregs Reviews numerical simulations of forming and flow processes, as well as pultrusion processes and modeling chemical vapor infiltration

This book presents the select proceedings of the International Conference on Functional Material, Manufacturing and Performances (ICFMMP) 2019. The book primarily covers recent research, theories, and practices relevant to surface engineering and processing of materials. It focuses on the lesser-known technologies and advanced manufacturing methods which may not be standardized yet but are highly beneficial to material and manufacturing industrial engineers. The book includes current advances in the field of coating, deposition, cladding, nanotechnology, surface finishing, precision machining, processing, and emerging advanced manufacturing technologies which enhance the

performance of materials in terms of corrosion, wear and fatigue. The book can be a valuable reference for beginners, researchers, and professionals interested in materials processing and allied fields.

This book comprises select proceedings of the International Conference on Futuristic Trends in Materials and Manufacturing (ICFTMM) 2019. It covers latest findings and challenges in manufacturing processes and characterization of different advanced materials. Latest fabrication techniques of polymer based materials, biomaterials, and energy materials along with their practical applications are discussed. The contents also focus on cost-effective and energy-efficient sustainable and green manufacturing technologies. The contents of this book will be useful for students, researchers as well as industry professionals interested in characterization and fabrication of materials.

“Materials Science in Manufacturing focuses on materials science and materials processing primarily for engineering and technology students preparing for careers in manufacturing. The text also serves as a useful reference on materials science for the practitioner engaged in manufacturing as well as the beginning graduate student. Integrates theoretical understanding and current practices to provide a resource for students preparing for advanced study or career in industry. Also serves as a useful resource to the practitioner who works with diverse materials and processes, but is not a specialist in materials science. This book covers a wider range of materials and processes than is customary in the elementary materials science books. This book covers a wider range of materials and processes than is customary in the elementary materials science books. * Detailed explanations of theories, concepts, principles and practices of materials and processes of manufacturing through richly illustrated text * Includes new topics such as nanomaterials and nanomanufacturing, not covered in most similar works * Focuses on the interrelationship between Materials Science, Processing Science, and Manufacturing Technology

This collection of selected peer-reviewed papers includes contributions from all over the world. The topics covered include new developments and applications in subtractive processes including advanced and non-traditional processes and abrasive machining, micro/nano-fabrication, material forming, and new techniques for the processing of materials and understanding the underlying principles of materials performance enhancement. This volume will be a valuable reference source for researchers in the materials processing field who wish to understand further the underlying mechanisms and this create new and practical technologies, systems and processes. It should also be particularly useful to practising engineers in materials processing who are responsible for providing efficient and effective operations.

This book deals with the polymers, different methods of synthesis, and synthesis of composites, as well as the different techniques used for polymer characterization. Most of the world's industries extract the anomalous properties of polymers to make excellent cost-effective materials. Because of this, the types of polymers, their processing, and the analysis of their various properties are very significant. Readers will gain a thorough knowledge about the processing of different types of polymers and composites made from them, as well as their various applications. Suitable for classroom use but especially important for researchers, this book addresses: Adhesion of amorphous polymers with vitrified bulk and surface glass transition Functionalized biopolymers and their applications A new synthesis of p-Cresol-Adipamide-Formaldehyde copolymer resin and its applications as an ion-changer Correlating performance of commercial viscosity modifiers for formulating shear stable industrial lubricants Synthesis of phthalonitrile polymers in ionic liquid and microwave media Studies on nanocomposite polymer electrolytes doped with $\text{Ca}_3(\text{PO}_4)_2$ for lithium batteries

This book comprises select peer-reviewed proceedings of the International Conference on Advances in Materials Research (ICAMR 2019). The contents cover latest research in materials and their applications relevant to composites, metals, alloys, polymers, energy and phase change. The indigenous properties of materials including mechanical, electrical, thermal, optical, chemical and biological functions are discussed. The book also elaborates the properties and performance enhancement and/or deterioration in order of the modifications in atomic particles and structure. This book will be useful for both students and professionals interested in the development and applications of advanced materials.

Advances in Magnetic Materials: Processing, Properties, and Performance discusses recent developments of magnetic materials, including fabrication, characterization and applications in the aerospace, biomedical, and semiconductors industries. With contributions by international professionals who possess broad and varied expertise, this volume encompasses both bulk materials and thin films and coatings for magnetic applications. A timely reference book that describes such things as ferromagnetism, nanomaterials, and Fe, ZnO, and Co-based materials, Advances in Magnetic Materials is an ideal text for students, researchers, and professionals working in materials science. Describes recent developments of magnetic materials, including fabrication, characterization, and applications Addresses a variety of industrial applications, such as aerospace, biomedical, and semiconductors Discusses bulk materials and thin films and coatings Covers ferromagnetism, nanomaterials, Fe, ZnO, and Co-based materials Contains the contributions of international professionals with broad and varied expertise Covers a holistic range of magnetic materials in various aspects of process, properties, and performance

Processing techniques are critical to the performance of polymer products which are used in a wide range of industries. Advances in polymer processing: From macro- to nano- scales reviews the latest advances in polymer processing, techniques and materials. Part one reviews the fundamentals of polymer processing with chapters on rheology, materials and polymer extrusion. Part two then discusses advances in moulding technology with chapters on such topics as compression, rotational and blow moulding of polymers. Chapters in Part three review alternative processing technologies such as calendaring and coating, foam processing and radiation processing of polymers. Part four discusses micro and nano-technologies with coverage of themes such as processing of macro, micro and nanocomposites and processing of carbon nanotubes. The final section of the book addresses post-processing technologies with chapters on online monitoring and computer modelling as well as joining, machining, finishing and decorating of polymers. With its distinguished editors and team of international contributors, Advances in polymer processing: From macro- to nano- scales is an invaluable reference for engineers and academics concerned with polymer processing. Reviews the latest advances in polymer processing, techniques and materials analysing new challenges and opportunities Discusses the fundamentals of polymer processing considering the compounding and mixing of polymers as

well as extrusion Assesses alternative processing technologies including calendaring and coating and thermoforming of polymers

Learn the latest advances in SiC (Silicon Carbide) technology from the leading experts in the field with this new cutting-edge resource. The book is your single source for in-depth information on both SiC device fabrication and system-level applications. This comprehensive reference begins with an examination of how SiC is grown and how defects in SiC growth can affect working devices. Key issues in selective doping of SiC via ion implantation are covered with special focus on implant conditions and electrical activation of implants. SiC applications discussed include chemical sensors, motor-control components, high-temperature gas sensors, and high-temperature electronics. By cutting through the arcane data and jargon surrounding the hype on SiC, this book gives an honest assessment of today's SiC technology and shows you how SiC can be adopted in developing tomorrow's applications.

This proceedings volume gathers selected papers presented at the Chinese Materials Conference 2017 (CMC2017), held in Yinchuan City, Ningxia, China, on July 06-12, 2017. This book covers a wide range of material surface science, advanced preparation and processing technologies of materials, high purity materials, silicon purification technology, solidification science and technology, performance and structure safety of petroleum tubular goods and equipment materials, materials genomes, materials simulation, computation and design. The Chinese Materials Conference (CMC) is the most important serial conference of the Chinese Materials Research Society (C-MRS) and has been held each year since the early 1990s. The 2017 installment included 37 Symposia covering four fields: Advances in energy and environmental materials; High performance structural materials; Fundamental research on materials; and Advanced functional materials. More than 5500 participants attended the congress, and the organizers received more than 700 technical papers. Based on the recommendations of symposium organizers and after peer reviewing, 490 papers have been included in the present proceedings, which showcase the latest original research results in the field of materials, achieved by more than 300 research groups at various universities and research institutes.

Advances in Materials Processing Proceedings of Chinese Materials Conference 2017 Springer

Advances in Laser Materials Processing: Technology, Research and Application, Second Edition, provides a revised, updated and expanded overview of the area, covering fundamental theory, technology and methods, traditional and emerging applications and potential future directions. The book begins with an overview of the technology and challenges to applying the technology in manufacturing. Parts Two thru Seven focus on essential techniques and process, including cutting, welding, annealing, hardening and peening, surface treatments, coating and materials deposition. The final part of the book considers the mathematical modeling and control of laser processes. Throughout, chapters review the scientific theory underpinning applications, offer full appraisals of the processes described and review potential future trends. A comprehensive practitioner guide and reference work explaining state-of-the-art laser processing technologies in manufacturing and other disciplines Explores challenges, potential, and future directions through the continuous development of new, application-specific lasers in materials processing Provides revised, expanded and updated coverage

International Conference on Recent Advances in Materials and Manufacturing Technologies (ICRAMMT 2018) Selected, peer reviewed papers from the 2nd International Conference on Recent Advances in Materials and Manufacturing Technologies (ICRAMMT-2018), November 19-20, 2018, Hyderabad, India

Advanced Materials and Processing are important areas of research in Engineering Science and Technology, and require a critical focus on bridging the gap between researchers and engineers. Advanced materials and processing play an increasingly important role in the global economy and in daily life. Researchers and engineers strive to develop new devices and processes, using mathematical and analytical tools to create technologies to handle the rapidly expanding range of materials and manufacturing processes. The Advances in Materials and Processing Technologies conference series creates a stimulating environment for the research collaboration of scholars at the local, national and international levels, contributes to the collective development of a knowledge-based society and economy.

Special topic volume with invited peer-reviewed papers only

The present book is an amalgamation of various topics which are quite relevant to academics pertaining to food science and technology. Sincere attempts have been made to map consumer's perception in terms of sensory evaluation of processed foods and their role on quality determination. To cover food safety, the topic of advancement in the traceability and transparency of food supply chain is discussed in length. Besides, providing basic nutrition food has become an essential source of health promoting phyto-ingredients too. To take care of the concerned population, therapeutic, functional and nutraceutical foods have also been discussed with their future trends. To give impetus to the growing and aged generations, the importance of the technology of weaning and geriatric foods is described in detail. Bio-preservation of various food products including fermentation had always attracted researchers for various reasons, inclusive of its novel and chemical free approach of preservation which has been aptly covered under current expansions in microbiology for food preservation and also under progression in biotechnology and its application in food processing. The cross linkage of advance technologies inclusive of nano-science is elaborated as technological advances in nano- science for specific food and nutrition delivery. Oil and spice commerce are two giants pillars in food processing industries and readers would surely be wishing to understand the developments in the technology of oils refineries and condiments. Smart and intelligent packing systems always extend an upper hand as far as shelf life monitoring of any processed food is concerned, especially when these are import worthy products. The science and technological approach of these packing innovations is also well covered. Note: T&F does not sell or distribute the hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka. This title is co-published with NIPA.

Volume is indexed by Thomson Reuters CPCI-S (WoS). This special issue of Advanced Materials Research contains a selection of high-quality research papers presented at the 14th International Conference on Advances in Materials and Processing Technologies (AMPT) held in Istanbul, Turkey, on July 13-16th, 2011. The papers are related mainly to materials and processing technologies, and the aim of the book is to provide a basis for the identification of new research and development needs in the fields of advanced engineering materials and manufacturing technologies.

Volume is indexed by Thomson Reuters CPCI-S (WoS). This book is a collection of peer reviewed papers presented under Symposium of Materials and Metallurgy in the 13th International Conference on Quality in Research (QiR) 2013 held in Yogyakarta, Indonesia, June 25-28 2013. This special issue is devoted as useful dissemination to serve the need for exchange the knowledge, experience, review of the progress and recent developments in the broad field of materials engineering and manufacturing. Studies presented in this book cover the following topics: (i) Advanced and Composite Materials; (ii) Polymer and Ceramic Materials; (iii) Materials Manufacturing and Processes; (iv) Corrosion and Degradation of Materials; and (v) Extraction of Materials.

This new book provides a solid understanding of the recent developments in the field of composites and nanocomposites. It explains the significance of the new fillers, such as graphene and arbon nanotubes in different matrix systems. The application of these materials in biological and others fields also makes this book unique. This detailed study of nanocomposites, their structure, processing and characterization will be of value in all walks of engineering life. The book covers the following topics: • polymer matrix composites • ceramic matrix composites • carbon matrix composites • wood-based composites • biocomposites • ecomposites • nanocomposites • processing • properties • fracture and damage mechanics • durability • and more Composite materials are solids that contain two or more

distinct constituent materials or phases, on a scale larger than the atomic. The term "composite" is usually reserved for those materials in which the distinct phases are separated on a scale larger than the atomic, and in which properties such as the elastic modulus are significantly altered in comparison with those of a homogeneous material. Composites have properties that cannot be achieved by either of the constituent materials alone. Composites are becoming more and more important as they can help improve our quality of life. Composites are put into service in flight vehicles, automobiles, boats, pipelines, buildings, roads, bridges, and dozens of other products. Researchers are finding ways to improve other qualities of composites so they may be strong, lightweight, long-lived, and inexpensive to produce. The science and engineering of composites and nanocomposites draws on traditional characterization and processing technologies. Research describing structures containing nanoparticles seems to rely on methods that are being pushed to the limit of resolution. Preparation of nanocomposites also poses very real processing challenges. The list of questions about the fabrication, characterization, and use of nanocomposites is long despite massive financial and intellectual investment. The magnitude of the effects these small particles impart to the bulk properties of a composite are great enough that the science is likely to continue to grow in importance.

Computational Materials Engineering: Achieving High Accuracy and Efficiency in Metals Processing Simulations describes the most common computer modeling and simulation techniques used in metals processing, from so-called "fast" models to more advanced multiscale models, also evaluating possible methods for improving computational accuracy and efficiency. Beginning with a discussion of conventional fast models like internal variable models for flow stress and microstructure evolution, the book moves on to advanced multiscale models, such as the CAFÉ method, which give insights into the phenomena occurring in materials in lower dimensional scales. The book then delves into the various methods that have been developed to deal with problems, including long computing times, lack of proof of the uniqueness of the solution, difficulties with convergence of numerical procedures, local minima in the objective function, and ill-posed problems. It then concludes with suggestions on how to improve accuracy and efficiency in computational materials modeling, and a best practices guide for selecting the best model for a particular application. Presents the numerical approaches for high-accuracy calculations Provides researchers with essential information on the methods capable of exact representation of microstructure morphology Helpful to those working on model classification, computing costs, heterogeneous hardware, modeling efficiency, numerical algorithms, metamodeling, sensitivity analysis, inverse method, clusters, heterogeneous architectures, grid environments, finite element, flow stress, internal variable method, microstructure evolution, and more Discusses several techniques to overcome modeling and simulation limitations, including distributed computing methods, (hyper) reduced-order-modeling techniques, regularization, statistical representation of material microstructure, and the Gaussian process Covers both software and hardware capabilities in the area of improved computer efficiency and reduction of computing time

Advances in Nanoporous Materials is a collection of comprehensive reviews of lasting value to the field. The contributions cover all aspects of nanoporous materials, including their preparation and structure, post-synthetic modification, characterization and use in catalysis, adsorption/separation, and all other fields of potential application, e.g., membranes, host/guest chemistry, environmental protection, electrochemistry, sensors, and optical devices. "Nanoporous materials" comprise all kinds of porous solids that possess pores in the range from about 0.2 nm up to 50 nm, irrespective of their chemical composition, their origin (natural or synthetic), and their amorphous or crystalline nature. Typical examples are zeolites and zeolite-like materials (e.g., crystalline microporous aluminophosphates and their derivatives), mesoporous oxides such as silica, metal organic frameworks, pillared clays, porous carbons, and related materials. State-of-the-art reviews keep coverage current Broad scope provides a full topical overview Contributions from renowned experts lend authority to the material

This book presents selected papers from the International Conference on Advances in Materials Processing and Manufacturing Applications (iCADMA 2020), held on November 5-6, 2020, at Malaviya National Institute of Technology, Jaipur, India. iCADMA 2020 proceedings is divided into four topical tracks - Advanced Materials, Materials Manufacturing and Processing, Engineering Optimization and Sustainable Development, and Tribology for Industrial Application.

Selected, peer reviewed papers from the 2012 International Conference on Advances in Materials and Manufacturing Processes (ICAMMP 2012), December 22–23, 2012, Beihai, China. The 508 papers are grouped as follows: Chapter 1: Composites; Chapter 2: Micro/Nano Materials and Ceramic; Chapter 3: Polymers and Biomaterials; Chapter 4: Optical/Electronic/Magnetic Materials; Chapter 5: Chemical Materials and Technologies; Chapter 6: Energy Materials; Chapter 7: Iron and Steel; Chapter 8: Metal Alloy Materials; Chapter 9: Materials for Building and Structures; Chapter 10: Mechanics of Materials; Chapter 11: Environmental. Research, Friendly Materials and Recycling Waste Technologies; Chapter 12: Surface Engineering/Coatings; Chapter 13: Materials Forming; Chapter 14: Materials Machining; Chapter 15: Welding & Joining; Chapter 16: Laser Processing; Chapter 17: Casting and Solidification; Chapter 18: Geology and Mineral Processing.

Materials processing is an important and essential step in the production of useful products, and is one of the major wealth-generating activities. With the increasing demand for the production of high precision, high integrity and high density devices and systems in modern life, materials processing has become more important than ever before. Following on from the previous eight publications in the series, "Asia-Pacific Conference on Materials Processing", this volume presents the latest developments in this field, and a new understanding of the underlying mechanisms.

This edited book contains extended research papers from AIMTDR 2014. This includes recent research work in the fields of friction stir welding, sheet forming, joining and forming, modeling and simulation, efficient prediction strategies, micro-manufacturing, sustainable and green manufacturing issues etc. This will prove useful to students, researchers and practitioners in the field of materials forming and manufacturing.

Collection of selected, peer reviewed papers from the 2014 International Forum on Materials Processing Technology (IFMPT 2014), Februar 15-16, 2014, Guangzhou, China.

The 163 papers are grouped as follows: Chapter 1: Polymers, Rubber and Elastomers, Chapter 2: Metals and Alloys, Chapter 3: Ceramics, Chapter 4: Composites, Chapter 5: Micro/Nano Materials, Chapter 6: Optical/Electrical/Magnetic Materials, Chapter 7: Energy Materials and Research, Chapter 8: Biomaterials, Chapter 9: Chemical Materials and Testing Technology, Chapter 10: Films, Chapter 11: Building and Road Materials, Construction Techniques, Chapter 12: Surface Engineering/Coatings Technology, Chapter 13: Materials Processing and Manufacturing Technology, Chapter 14: Mining and Mineral Processing, Chapter 15: Mechanical Behavior and Fracture, Chapter 16: Friction, Wear and Lubrication, Chapter 17: Heat Generation and Conduction

This book cover the latest advances in materials and structures in manufacturing and processing including additive and subtractive processes. It's intended to provide a compiled resource that reviews details of the advances that have been made in recent years in manufacturing and processing of materials and structures. A key development incorporated within this book is 3D printing, which is being used to produce complex parts including composites with odd shape fibers, as well as tissue and body organs. This book has been tailored for engineers, scientists and practitioners in a number of different fields such as aerospace, mechanical engineering, materials science and biomedicine. Biomimetic principles have also been integrated.

The volume covers a wide range of materials research and maintains a good balance of theoretical and applied work. In keeping with the present trend the number of papers in Nanomaterials in the highest with a good number in Electronic Materials and Energy Storage Materials. Reflecting the varied interests of the Department there are quality papers on Metallurgical themes such as Metal Casting, Mechanical Processing and Materials Joining.

This volume contains the selected papers resulting from the 7th Annual International Workshop on Materials Science and Engineering. This proceedings presents and discusses key concepts and analyzes the state-of-the-art of the field. IWMSE 2021 is an academic conference in a series held once per year.

Volume is indexed by Thomson Reuters CPCI-S (WoS). Advanced Materials and Processing are important areas of research in Engineering Science and Technology, which have to focus on bridging the critical gap between researchers and engineers in order to shape the new world. Advanced Materials and Processing play an increasingly important role in the global economy and in daily life. Researchers and engineers strive to develop new devices and processes, using mathematical and analytical tools, in order to create technologies for a rapidly expanding range of materials and manufacturing processes. A large proportion of the present papers addressed current scientific research and provided solutions to industrial problems; thereby creating an environment of mutual interest to industry and academia. The papers are grouped into 10 chapters: 1. Forming Processes, 2. Casting, Joining and Related Processes, 3. Materials, 4. Materials Removal Processes, 5. High Energy Beam Removal Process, 6. Precision Engineering and Nano-Technology, 7. Surface Engineering, 8. Computer-Aided Engineering, 9. Green Manufacturing and Management, 10. Others. This comprehensive coverage will be much appreciated by readers.

Collection of selected, peer reviewed papers from the 2014 5th International Conference on Advances in Materials and Manufacturing (ICAMMP 2014), December 20-21, 2014, Fuzhou, China. The 192 papers are grouped as follows: Chapter 1: Composites; Chapter 2: Low-dimensional and Nano-Materials; Chapter 3: Metal-based Materials and Alloys; Chapter 4: Building and Construction Materials; Chapter 5: Biomaterials and Technologies; Chapter 6: Chemical Materials and Technologies; Chapter 7: Material Testing, Characterization and Applications; Chapter 8: Surface Engineering and Coating Technology; Chapter 9: Materials Processing Technology and Applied Research
