'A moving tribute that beautifully evokes the struggles, the initial triumphs, the setbacks, the unexpected and often stunning achievements . . . [while] uncovering cognitive abilities in Alex that no one believed were possible.' Publishers Weekly On September 6, 2007, an African Grey parrot named Alex died prematurely at age thirty-one. His last words to his owner, Irene Pepperberg, were 'You be good. I love you'. What would normally be a quiet, very private event was, in Alex's case, headline news. Over the thirty years they had worked together, Alex and Irene had become famous - two pioneers who opened an unprecedented window into the

hidden yet vast world of animal minds. Alex's brain was the size of a shelled walnut, and when Irene and Alex first met, birds were not believed to possess any potential for language, consciousness, or anything remotely comparable to human intelligence. Yet, over the years, Alex proved many things. He could add. He could sound out words. He understood concepts like bigger, smaller, more, fewer, and none. He was capable of thought and intention.

Together, Alex and Irene uncovered a startling reality: We live in a world populated by thinking, conscious creatures. The fame that resulted was extraordinary. Yet there was a side to their relationship that never made the papers. They were emotionally connected to one another. They shared a deep bond far beyond science. Alex missed Irene when she was away. He was jealous when she paid attention to other parrots, or even people. He liked to show her who was boss. He loved to dance. He sometimes became bored by the repetition of his tests, and played jokes on her. Sometimes they sniped at each other. Yet nearly every day, they each said, 'I love you'. Alex and Irene stayed together through thick and thin - despite sneers from experts, extraordinary financial sacrifices, and a nomadic existence from one university to another. The story of their thirty-year adventure is equally a landmark of scientific achievement and of an unforgettable human-animal bond.

Recounts the true story of an African grey parrot who was the subject of a devoted graduate student's scientific experiment on animal intelligence and who astonished everyone with its ability to add, understand concepts and speak hundreds of words. By the author of *Aliens for Breakfast*.

In *CONVERSATIONS WITH COSMO: AT HOME WITH AN AFRICAN GREY PARROT*, Dr. Betty Jean Craige tells the story of her parrot's education in the language and culture of her human friends. Cosmo is a seven-year-old female Congo African Grey Parrot who by the age of six had learned more than a hundred words and had uttered more than two hundred different phrases, makes up her own phrases, and is still learning. Craige recounts how Cosmo learned to talk, developed social skills and a sense of humor, and became an adorable feathery little person, a real party animal. Cosmo is funny-her first joke was "Telephone for bird!"-and so is Craige. Craige's purpose in writing this very entertaining book is not only to report and explain her parrot's acquisition of language and its cognitive abilities, but also through Cosmo's story-to awaken readers to the mental activities of all the animals with whom we humans share space on our planet. The book has a preface by Irene Pepperberg, author of *THE ALEX STUDIES* and *ALEX AND ME*, and two appendices: a list of "Cosmo's Utterances" and a list of "Forty-Four Tips for Living with an African Grey" and an index.

A New York Times Bestseller "The most scientifically important dog in over a century." —Brian Hare Chaser has fascinated dog lovers and scientists alike. Her story reveals the potential for taking out dialogue with dogs well beyond "fetch." When retired psychology professor John Pilley first got his new Border collie puppy, Chaser, he wanted to explore the boundaries of language learning and communication between humans and man's best friend. Exhibiting intelligence previously thought impossible in dogs, Chaser soon learned the names of more than a thousand toys and sentences with multiple elements of grammar. Chaser's accomplishments are revolutionizing the way we think about the intelligence of animals. John and Chaser's inspiring journey demonstrates the power of learning through play and opens our eyes to the boundless potential in the animals we love.

From two experts on wild parrot cognition, a close look at the intelligence, social behavior, and conservation of these widely threatened birds. People form enduring emotional bonds with other animal species, such as dogs, cats, and horses. For the most part, these are domesticated animals, with one notable exception: many people form close and supportive relationships with parrots, even though these amusing and curious birds remain thoroughly wild creatures. What enables this unique group of animals to form social bonds with people, and what does this mean for their survival? In *Thinking like a Parrot*, Alan B. Bond and Judy Diamond look beyond much of the standard work on captive parrots to the mischievous, inquisitive, and astonishingly vocal parrots of the wild. Focusing on the psychology and ecology of wild parrots, Bond and Diamond document their distinctive social behavior, sophisticated cognition, and extraordinary vocal abilities. Also included are short vignettes—field notes on the natural history and behavior of both rare and widely distributed species, from the neotropical crimson-fronted parakeet to New Zealand's flightless, ground-dwelling kākāpō. This composite approach makes clear that the behavior of captive parrots is grounded in the birds' wild ecology and evolution, revealing that parrots' ability to bond with people is an evolutionary accident, a by-product of the intense sociality and flexible behavior that characterize their lives. Despite their adaptability and intelligence, however, nearly all large parrot species are rare, threatened, or endangered. To successfully manage and restore these wild populations, Bond and Diamond argue, we must develop a fuller understanding of their biology and the complex set of ecological and behavioral traits that has led to their vulnerability. Spanning the global distribution of parrot species, *Thinking like a Parrot* is rich with surprising insights into parrot intelligence, flexibility, and—even in the face of threats—resilience.

20 years ago Pepperberg set out to discover whether results of pigeon studies necessarily meant that other birds were incapable of mastering cognitive concepts and the rudiments of referential speech. This is a synthesis of her studies.

The Wild Parrots of Telegraph Hill is the inspiring story of how one man found his life's work—and true love—among a gang of wild parrots roosting in one of America's most picturesque urban settings. Mark Bittner was down on his luck. He'd gone to San Francisco at the age of twenty-one to take a stab at a music career, but he hadn't had much success. After many years as an odd-jobber in the area, he accepted work as a housekeeper for an elderly woman. The gig came with a rent-free studio apartment on the city's famed Telegraph Hill, which had somehow become home to a flock of brilliantly colored wild parrots. In this unforgettable story, Bittner recounts how he became fascinated by the birds and made up his mind to get to know them and gain their trust. He succeeds to such a degree that he becomes the local wild parrot expert and a tourist attraction. People can't help gawking at the man who, during daily feedings, stands with parrots perched along both arms and atop his head. When a documentary filmmaker comes along to capture the phenomenon on film, the story takes a surprising turn, and Bittner's life truly takes flight.
