San Francisco Aeronautical Society, Ronald Edward George Davies, Tom D. Crouch, John E. Krupnick

Air Transport in the 21st Century John F. O'Connell, George Williams, 2016-12-05 Airlines are buffeted by fluctuating political and economic landscapes, ever-changing competition, technology developments, globalization, increasing deregulation and evolving customer requirements. As a consequence all sectors of the air transport industry are in a constant state of flux. The principle aim of this book is to review current trends in the airline industry and its related suppliers, thereby providing an insight into the forces that are changing its dynamics. The factors that are reshaping the structure of the industry are examined with a view to identifying the key issues whose impact will be critical in the future. The book features two very distinct sections. The first contains short contributions from industry executives at CEO/VP level from airlines, aircraft/engine manufacturers, safety and navigational provider organisations, who have set out their take of where the airline industry is heading. This commercial input sets the scene for the book and provides the bridge to the second section, which is composed of 18 chapters written by distinguished academic authors. Each chapter presents a valuable insight into a specific area of the air transport industry, including: airlines, airports, cargo, deregulation, the environment, navigation, strategy, information technology, security and tourism. The shared objective of the authors is to describe and explain the core competencies that are determining the current shape of the industry and to examine the forces that will change its direction going forward. The book is written in a management style and will appeal to all levels of personnel who work for airlines across the world. It is also written for airport authorities, aerospace manufacturers, regulatory and government transportation agencies, researchers and students of aviation management, transport studies, tourism and the wider air transport industry.

Airline Business in the 21st Century Rigas Doganis, 2005-06-28 This book focuses on the major issues that will affect the airline industry in this new millennium. It tells of an industry working on low margins and of cut-throat competition resulting from 'open skies'. Among the issues discussed are: * the low-cost airline * the impact of electronic commerce * the debate on global airline alliances * privatizing state-owned airlines * the creation of a Trans Atlantic Common Aviation area

Most importantly, the book carefully analyzes the strategies that are needed for airlines to succeed in the twenty-first century. This is essential reading for anyone interested in aviation.

21st Century Airlines Nawal K. Taneja, 2017-09-08 In *21st Century Airlines: Connecting the Dots*, Nawal Taneja addresses the challenges and opportunities facing the airline industry as it tries to innovate and create products and services that are radically different by 'connecting the dots' at four key levels: recognizing the implications of global events, improving cross-functional collaboration within the organization, working more closely with the travel chain, and providing much higher engagements with connectors within the social networks. The book synthesizes insights gained from the experience of non-traditional businesses, such as Uber, that have no physical assets and that focus on scalability through platforms, as well as traditional businesses, such as Mercedes-Benz, that are transitioning from operators of physical assets to adapt to the on-demand and sharing economies. These insights show pragmatically that digitizing airline businesses would require digital mind-sets, digital technologies, digital strategies, and digital workplaces to explore new frontiers in value for both customers and airlines. Moreover, forward-thinking airlines need to consider working with bimodal organizational structures, in which one group optimizes current business models (network, fleet, and schedule planning, as well as revenue management) while a second group explores innovative ways to add digital features to physical products to provide a consistent experience throughout the journey. The book is written for all senior-level practitioners of airlines and related businesses worldwide, as well as senior-level government policymakers.

History of Air Cargo and Airmail from the 18th Century Camille Allaz, 2005-03 It was first published in French by the Institut du Transport Aerien in 1998 and received very favourable reviews. Through the publication of the English language edition, this remarkable work is now accessible to many more readers around the world. In addition, the author has expanded the book with new sections and he has extensively updated it to bring the story of air cargo into the twenty first century, concluding with a look into the future. The author, Camille Allaz, served as Senior Vice President Cargo at Air France for 10 years which gave him an insider's close-up view of his subject, a privilege not enjoyed by many historians. There is no aspect of mail or cargo transport by air that has not been thoroughly researched and documented by Allaz, from the first brief transport of animals by balloon in France in 1783 to the vast global networks of the integrated express carriers in the 21st century. As a true scholar, he fits his narrative into the larger framework of political, military, economic and aviation history. This book should stand for years as the definitive work on the history of air cargo and airmail, and will be of immense value to the academic community, to the air cargo industry, the postal services, and to the general public.

The Airline Business Rigas Doganis, 2005-11-16 The second edition of Rigas Doganis' book brings the airline industry

story up to date, exploring airline mergers and alliances, price wars, the impact of disasters and the future prospects for the industry as a whole.

The Use of Airspace and Outer Space for all Mankind in the 21st Century Chia-Jui Cheng, 2023-07-24 The very nature of international air transportation and outer space activities means that they have an international perspective. This is more evident today than at any time in the past, due to the intensification of trans-boundary trade, the internationalization of the division of work and the acceleration of technological progress. The Asian Institute of Air and Space Law, the Graduate School of Law, Soochow University, Taipei, the International Institute of Air and Space Law, Leiden University, and the Institute of Air and Space Law, McGill University, have instituted international conferences in order to provide a world platform for eminent specialists and scholars. The Tokyo Conference, upon which this excellent collection of papers is based, was concerned with a wide range of legal and practical questions arising from regulatory developments in international air transportation and in the exploration, exploitation and use of outer space and celestial bodies. The main topics of deliberation were: megacarriers in the 21st century, the need to revise the Bermuda Capacity Formula and the Chicago Convention, liability and responsibility in international aviation, safety, security and environment, airline industry competition, legal and political aspects of space transportation and manned space flights, the protection of the space environment and dispute settlement in air and space law. They are discussed in this volume with unparalleled authority.

Australia's Role in 21st Century Air Transport John Bushell,1993*

The Airline Industry Alessandro Cento,2008-10-15 The debate on the future of the aviation sector and the viability of its traditional business practices is the core of this book. The liberalization of the EU market in the 1990s has radically modified the competitive environment and the nature of airline competition. Furthermore, the new millennium began with terrorist attacks, epidemics, trade globalization, and the rise of oil prices, all of which combined to push the industry into a “perfect storm”. Airline industry profitability has been an elusive goal for several decades and the recent events has only accentuated existing weaknesses. The main concern of industry observers is whether the airline business model, successful during the 1980s and 1990s, is now sustainable in a market crowded by low-cost carriers. The airlines that will respond rapidly and determinedly to increase pressure to restructure, consolidate and segment the industry will achieve competitive advantages. In this context, the present study aims to model the new conduct of the ‘legacy’ carriers in a new liberalized European market in terms of network and pricing competition with low-cost carriers and competitive reaction to the global economic crises.

Air Navigation Law Ruwantissa Abeyratne, 2012-03-05 The aviation community, in which the International Civil Aviation Organization (ICAO), the International Air Transport Association (IATA) and the Civil Air Navigation Services Organization (CANSO) play leading roles, is hard at work in bringing aviation into the 21st Century. In doing so, the United States and Europe have taken proactive steps forward in introducing modernization, particularly in moving towards more efficient air traffic management systems within NextGen and SESAR. Elsewhere, in the fields of personnel licensing, rules of the air, accident investigation and aeronautical charts and information, significant strides are being made in moving from mere regulation to implementation and assistance calculated to make all ICAO member States self sufficient in international civil aviation. However, these objectives can be achieved only if the aviation industry has a sustained understanding of the legal and regulatory principles applying to the various areas of air navigation. This book provides that discussion. Some of the subjects discussed in this book are: sovereignty in airspace; flight information and air defence identification zones; rules of the air; personnel licensing; meteorological services; operations of aircraft; air traffic services; accident and incident investigation; aerodromes; efficiency aspects of aviation and environmental protection; aeronautical charts and information; the carriage of dangerous goods; and NextGen and SESAR . Except for NextGen and SESAR, these subjects form the titles of the Annexes to the Chicago Convention that particularly involve the rights and liabilities of the key players involved in air navigation.

Airport Engineering Norman J. Ashford, Saleh Mumayiz, Paul H. Wright, 2011-04-06 First published in 1979, Airport Engineering by Ashford and Wright, has become a classic textbook in the education of airport engineers and transportation planners. Over the past twenty years, construction of new airports in the US has waned as construction abroad boomed. This new edition of Airport Engineering will respond to this shift in the growth of airports globally, with a focus on the role of the International Civil Aviation Organization (ICAO), while still providing the best practices and tested fundamentals that have made the book successful for over 30 years.

Air Transport Infrastructure for the 21st Century , 2000

The Economic Geography of Air Transportation John T. Bowen, 2010-04-05 Like the railroad and the automobile, the airliner has changed the very geography of the societies it serves. Fundamentally, air transportation has helped redefine the scale of human geography by dramatically reducing the cost of distance, both in terms of time and money. The result is what the author terms the 'airborne world', meaning all those places dependent upon and transformed by relatively inexpensive air transportation. The Economic Geography of Air Transportation answers three key questions: how did air transportation develop in the century after the Wright Brothers, what does it mean to live in an airborne world, and what is the future of

aviation in this century? Examples are drawn from throughout the world. In particular, ample consideration is given to the situation in developing countries, where air transportation is growing rapidly and where, to a considerable degree, the future of the airborne world will be determined. The book weaves together the technological development of aviation, the competition among aircraft manufacturers and their stables of airliners, the deregulation and privatization of the airline industry, the articulation of air passenger and air cargo services in everyday life, and the challenges and controversies surrounding airports. It will be of particular interest to students and researchers in air transport history, the geography of the airline industry, air transport technological development, competition in the commercial aircraft industry, airport development, geography and economics. It will also be useful to professionals working in the airline, airport, and aircraft manufacturing industries.
