What should be government's role in a market-oriented health care system? What's the appropriate amount of regulation? Who should regulate--states, federal government, or market forces? What role do the courts play in this regulation? Are there existing models that might guide leaders in designing an effective regulatory structure? Welcome to the great managed care debate. In *Regulating Managed Care*, twenty-six of the nation's leading health policy experts give health care administrators, clinicians, and policy makers insight into the issues behind this critical exchange and provide leaders with a road map to assess the policy options available to protect the quality of our health care delivery system. "This collection of papers, from an extraordinary group of authors, makes a valuable contribution to the ongoing policy debate and will be of interest to anyone concerned with the future of our healthcare system."---Charles A. Sanders, retired chairman and CEO Glaxo Inc. and former general director, Massachusetts General Hospital

In this concise, thought-provoking book, prominent researchers analyze existing knowledge on adolescent literacy, examine the implications for classroom instruction, and offer specific goals for future research. The volume reviews cutting-edge approaches to understanding the unique features of teaching and learning in secondary schools. Particular attention is given to how teaching literacy across disciplines can improve students' content-area learning, and the book includes chapters dedicated to literacy in math and science classrooms. Also addressed are key findings and unresolved questions regarding fluency instruction, struggling adolescent readers, responding to the literacy needs of African American adolescents, and literacy coaching.

While Universal's *Dracula* and *Frankenstein* (both 1931) have received the most coverage of any of the studio's genre releases, it is the lesser known films that have long fascinated fans and historians alike. Starting with *The Last Warning*, a 1929 movie released as both a silent and a talkie, Universal provided a decade of films that entertained audiences and sometimes frustrated critics. Each of Universal's horror, science fiction and "twisted mystery" films receives an in-depth essay for each film. The focus is first on the background to the making of the movie and its place in the Universal catalog. A detailed plot synopsis with critical commentary follows. Filmographic data for the film conclude the entry. Universal's *The Shadow* short film series is covered in an appendix. Many rare illustrations and movie posters are also included.

A "very dramatic [and] compelling" World War II story of murder, mutiny, and a military cover-up, from the author of *The Phoenix Program* (*The New York Times*). Captured by the Japanese while on patrol in the fetid jungles of New Guinea, Douglas Valentine's father, who'd enlisted in the US Army at age sixteen, was sent to a prison camp in the Philippines, where he was

interned with Australian and British soldiers. The events that followed make up this "well-told, chilling" story of betrayal and brutality--a powerful tale of a son uncovering the traumatic events that shaped the rest of his father's life (Los Angeles Times Book Review). "Not just a searing picture of life in a terrible POW camp, it is also a significant historical document about a place that the U.S. military says never existed." --Publishers Weekly

Surveying for Construction 5e is an essential textbook for students of engineering new to surveying, and will also appeal to students of building and environmental studies and archaeology. Offering a strong grounding in land and construction surveying, the authors clearly and comprehensively guide the reader through the principles, methods and equipment used in modern-day surveying. Taking into account recent advances in the field, the material has been fully updated and revised throughout including new and up-to-date coverage of levelling, total stations, detail surveys, and EDM. A new chapter on GPS technology has been added. In keeping with the practical nature of the book, there are chapters on setting out construction works and surveying existing buildings, which guide the reader step-by-step through the fundamental procedures. The clear and methodical nature of the explanations, supported by a wide range of exercises and examples, make Surveying for Construction 5e an invaluable and modern introduction to surveying. Key features include: • Fully updated coverage and new material throughout, including a new chapter on GPS • New Learning Objectives and Chapter Summaries which guide the student through the learning process and highlight the key principles and methods for each chapter • Numerous diagrams and figures which give students a clear and detailed understanding of equipment and procedures • Extensive boxed examples and exercises that guide students through real-world surveying methods and calculations • Website material: online material for creating your own surveying project allows students to practice the methods and techniques they have learnt

What does it mean to make films in Latin America? The landscape today is as complex as it is dynamic. New directors and new projects are constantly emerging; film festivals appear one after another in what could only be described as an explosion of cinema in the region. And yet inherent to this panorama, both so vital and so difficult to define, there is a troubling sense of uncertainty. This book, which brings together the writing of directors, producers, scholars and critics, examines the current state of Latin American cinema. Exploring tendencies and possibilities for the future of the audiovisual arts within the context of recent changes in methods of production and circulation, the authors address a number of key issues, including the role of independent filmmaking in the market and in relation to alternative modes of production, the formation of new regional and global identities, means of support for filmmakers in Latin America, and the question of new formats, categories, and genres. The result is less a mosaic of fragments than it is a tapestry whose interwoven threads create complex and changing shapes that constitute the fabric itself. This tapestry allows us to glimpse, beyond their particularities, the points of contact between different parts of the region. This book is an abridged and revised edition of HACER CINE. Produccion Audiovisual en America Latina published in 2008 by Fundacion TyPA and Editorial Paidos. This new book, edited by Eduardo. A. Russo and translated from the Spanish by Heather Cleary Wolfgang, was made possible by the support of the Rockefeller Foundation.

When Locke High School opened its doors in 1967, the residents of Watts celebrated it as a sign of the changes promised by Los Angeles. But four decades later, first-year Teach for America recruits Rachelle, Phillip, Hrag, and Taylor are greeted by a school that looks more like a prison, with bars, padlocks, and chains all over. With little training and experience, these four will be asked to produce academic gains in students who are among the most disadvantaged in the country. Relentless Pursuit lays bare the experiences of these four teachers to evaluate the strengths and peculiarities of Teach for America and a social reality that has become inescapable.

"As novelist and poet Andrei Codrescu points out in the essay that accompanies this selection of photographs from the Getty Museum's collection, Evans's photographs are the work of an artist whose temperament was distinctly at odds with Beals's impassioned rhetoric. Evans's photographs of Cuba were made by a young, still maturing artist who - as Codrescu argues - was just beginning to combine his early, formalist aesthetic with the social concerns that would figure prominently in his later work."--Jacket.

Foreword by Christoph Cardinal Schönborn Darwin's theory of evolution remains controversial, even though most scientists, philosophers, and even theologians accept it, in some form, as an explanation for the variety of organisms. The controversy erupts when the theory is used to try to explain everything, including every aspect of human life, and to deny the role of a Creator or a purpose to life. The overreaching of many scientists into matters beyond the self-imposed limits of scientific method is perhaps explained in part by the loss of two important ideas in modern thinking—final causality or purpose, and formal causality. Scientists understandably bracket the idea out of their scientific thinking

because they seek explanations on the level of material and efficient causes only. Yet many of them wrongly conclude from their selective study of the world that final and formal causes do not exist at all and that they have no place in the rational study of life. Likewise, many erroneously assume that philosophy cannot draw upon scientific findings, in light of final and formal causality, to better understand the world and man. The great philosopher and historian of philosophy, Etienne Gilson, sets out to show that final causality or purposiveness and formal causality are principles for those who think hard and carefully about the world, including the world of biology. Gilson insists that a completely rational understanding of organisms and biological systems requires the philosophical notion of teleology, the idea that certain kinds of things exist and have ends or purposes the fulfillment of which are linked to their natures—in other words, formal and final causes. His approach relies on philosophical reflection on the facts of science, not upon theology or an appeal to religious authorities such as the Church or the Bible. "The object of the present essay is not to make of final causality a scientific notion, which it is not, but to show that it is a philosophical inevitability and, consequently, a constant of biophilosophy, or philosophy of life. It is not, then, a question of theology. If there is teleology in nature, the theologian has the right to rely on this fact in order to draw from it the consequences which, in his eyes, proceed from it concerning the existence of God. But the existence of teleology in the universe is the object of a properly philosophical reflection, which has no other goal than to confirm or invalidate the reality of it. The present work will be concerned with nothing else: reason interpreting sensible experience—does it or does it not conclude to the existence of teleology in nature?" Etienne Gilson

The present treatise is intended as text-book on Analytical Dynamics, this book covers the entire revised syllabus in analytical dynamics.

This book corresponds to a graduate course given many times by the authors, and should prove to be useful to mathematicians and theoretical physicists.

Ranging from the realism of Dickens to the horror of Dracula, Gail Turley Houston examines how the language and imagery of economics, commerce and banking are transformed in Gothic fiction, and traces literary and uncanny elements in economic writings of the period. Houston pays particular attention to the term 'panic' as it moved between its double uses as a banking term and a defining emotion in sensational fiction.

Within the Frame is a book about finding and expressing your photographic vision, specifically where people, places, and cultures are concerned. A personal book full of real-world wisdom and incredible images, author David duChemin (of pixelatedimage.com) shows you both the how and the why of finding, chasing, and expressing your vision with a camera to your eye. Vision leads to passion, and passion is a cornerstone of great photography. With it, photographs draw the eye in and create an emotional experience.

Without it, a photograph is often not worth—and can't capture—a viewer's attention. Both instructional and inspirational, Within the Frame helps you on your photographic journey to make better images of the places and people you love, whether they are around the world or in your own backyard. duChemin covers how to tell stories, and the technology and tools we have at our disposal in order to tell those narratives. Most importantly, he stresses the crucial theme of vision when it comes to photographing people, places, and cultures—and he helps you cultivate and find your own vision, and then fit it within the frame.

Written by leading psychologists, psychiatrists, and plastic surgeons, this volume provides a thorough understanding of the psychological issues involved in reconstructive and cosmetic surgery. The book examines the relationships among physical appearance, body image, and psychosocial functioning, reviews the literature on the psychological functioning of plastic surgical patients, and offers clinically effective recommendations on psychological assessment and care of specific patient groups. Major sections detail the psychological issues surrounding specific disfigurements and reconstructive procedures and cosmetic surgery of the face and body. These chapters include brief questionnaires for psychological assessment of patients. Concluding chapters discuss bioethical, professional, and legal issues.

Psychosocial Rehabilitation is a comprehensive ready-reference for mental health practitioners and students, providing practical advice on the full range of interventions for psychosocial rehabilitation. It contextualises the interventions described and provides pointers to enable the reader to explore the theory and research. This manual recognises the wide-ranging impact of mental illness and its ramifications on daily life, and promotes a recovery model of psychosocial rehabilitation and aims to empower clinicians to engage their clients in tailored rehabilitation plans. The book is divided into five key sections. Section 1 looks at assessment covering tools available in the public domain, instruments, scoring systems, norms and applications for diagnosis and measurement of symptoms, cognitive functioning, impairment and recovery. Section 2 covers the full range of therapeutic interventions and offers advice on training and supervision requirements and evaluation of process, impact and outcome. Section 3 provides manuals and programs for interventions effectively provided as group activities. Section 4 explains how to design a full programme that integrates therapeutic interventions with group programmes as well as services provided by other agencies. The final section looks at peer support and self help, providing manuals and resources that support programmes and interventions not requiring professional or practitioner direction.

While few Christian thinkers would question the trustworthiness of God, this topic is key for understanding the divine nature and God's revelation to the world. The Trustworthiness of God offers a comprehensive look at the theme of God's faithfulness, exploring the relationship between the doctrines of God and of Scripture from every possible perspective. Written by a team of international scholars, the book begins by surveying what key biblical texts say about God's faithfulness. Other chapters look to Jesus as a model of God's trustworthiness, examine Paul's writing on the subject, consider the thoughts of the church fathers, and place all of this evidence within the framework of systematic theology. Broad in scope and irenic in design, The Trustworthiness of God will benefit teachers, students, and general readers alike.

Physical Methods in Chemical Analysis, Volume IV focuses on the application of physical methods in chemical analysis, including dialysis, chromatography, electromagnetic separations, and

thermal diffusion. The selection first offers information on dialysis and separations with molecular sieves and foams. Topics include membranes for dialysis, apparatus and techniques, application of molecular sieves to the problems of separation, adsorption measurements and techniques, and molecular sieve adsorbents. The text then elaborates on separations with foams and electromagnetic separations. The publication explains ion exchange and analytical applications of inclusion. Discussions focus on separations by ion-exchange chromatography, general properties of ion-exchange resins, ion exclusion, and methods and technical details. The publication then ponders on separation of gases and liquids by thermal diffusion and solvent extraction. The selection is highly recommended for readers interested in the application of physical methods in chemical analysis.

For anyone who has ever wondered what it's like to fly the SR-71 on a secret Mach 3 reconnaissance mission, this book has the answer. Completely redesigned and updated with photos from author Colonel Richard H. Graham's personal archive, as well as a new introduction, *Flying the SR-71 Blackbird* details what an SR-71 mission entailed, from planning to donning a pressure suit to returning to base. The Lockheed SR-71, unofficially known as the Blackbird, was an advanced, long-range, Mach 3 strategic reconnaissance aircraft developed by Lockheed Skunk Works. The aircraft flew so fast and high that not one was ever shot down, even by a missile. SR-71 pilot and instructor Colonel Richard Graham offers a rare cockpit perspective on how regular Air Force pilots and navigators transformed themselves into SR-71 Blackbird crews, turning their unique aviation talents to account in an unprecedented way. Arguably the world's foremost expert on piloting the Blackbird, Graham takes readers along on an operational mission that only a few Air Force pilots have ever experienced.

Covers challenges to the mining industry with technical contributions on topics such as: investment, potential and evaluation; open-pit technology; mineral processing; solvent extraction; transportation, conveyor design and practice; environmental issues; and smelting and refining.
