Air Transport: A Tourism Perspective provides rigorous insights into the current complexities, synergies and conflicts within air transportation and tourism, presenting a balanced, comprehensive, contemporary, and global analysis that thoroughly examines the links between theory and practice. The book offers readers a multi-sector, global perspective on the practical implications of the link between air transport and tourism. By using a novel approach, it systematically explores the successive stages of a tourist's trip-investigating reasons for flying, the airport experience, airline industry structures, competition and regulation, and air transportation and destination interrelationships. In addition, the book explores current and salient debates on such issues as the influence of traveling to visit friends and family, the role of charters versus low cost carriers, public subsidies to support airport development, and much more. Presents insights from an international team of expert contributors with proven research and publication experience in their specialty area Includes cutting-edge analyses based on original research that identifies emerging research directions and policy and managerial implications Utilizes a multidisciplinary approach to fully explore theoretical and policy concepts and their effect on air transportation and tourism development Provides case studies from around the globe in each chapter This is the first book to review a trend in transport systems which has only recently come of age: the multi-modal interchange. Separate modes of transport are being linked through 'joined-up thinking', and transport designers and authorities are only now able to exploit interchange opportunities. This book presents examples of how these new opportunities have been planned and designed, and outlines how transfer and mobility can be improved in the future. Blow takes the airport as the focal point of true multi-modal passenger terminals and presents the development of these buildings as representing a new experience in travel. The book shows that the success of the experience of transferring from one mode of transport to another depends on the many factors, including congestion in an already overloaded system, and the way that designers and managers have addressed contingency planning. International examples are drawn from areas where mobility is most concentrated and the demands on design are at their highest. The book also addresses important issues of rebuilding and redevelopment, where once separate modes of transport are being linked to each other, and where short-term inconveniences rectify past wrongs in the long term. It is a compendium of architectural and engineering achievement.

Drawing comes with several benefits. One of these is the development of fine motor skills that will aid in the completion of tasks involving object manipulation by hand. As your child draws, he/she begins to express what he/she imagines. Objects are given careful details so features are learned. This way, you can understand what your child creates. How are your child's drawing skills now?

Aviation Investment uniquely addresses investment appraisal methods across the key industries that make up the aviation sector, including the airports, air traffic management, airline and aircraft manufacturing - or aeronautic - industries. It is a practice-oriented book where methods are presented through realistic case studies. The emphasis is on economic appraisal, or cost-benefit analysis, in order to determine the viability of projects not only for private investors but for society as a whole. Financial (cash flow) appraisal is illustrated alongside economic appraisal, as the latter builds on the former, but also to show how economic appraisal enhances standard financial appraisal to determine the long-term sustainability of any investment. Aviation is a capital-intensive sector that is growing rapidly, with world traffic expected to double over the next 15 years or so. A great deal of economic appraisal of investment projects takes place already, as aviation is subject to government intervention through economic regulation and financial support, and as both investors and policy makers seek to understand issues such as how environmental legislation may impact the viability of investments. Both economic growth and welfare go hand in hand with sound investment decisions, particularly regarding sectors such as aviation where investments are large and almost invariably debt-financed. Aviation Investment offers all aviation sub-sectors a single-source reference, bringing together the theoretical background of the economic appraisal literature and aviation investment in practice. It is written in a style that is accessible to non-academic professionals, using formulae only where strictly necessary to enable practical applications, and benefits from the substantial practical experience of the author.

The Reference Manual on Scientific Evidence, Third Edition, assists judges in managing cases involving complex scientific and technical evidence by describing the basic tenets of key scientific fields from which legal evidence is typically derived and by providing examples of cases in which that evidence has been used. First published in 1994 by the Federal Judicial Center, the Reference Manual on Scientific Evidence has been relied upon in the legal and academic communities and is often cited by various courts and others. Judges faced with disputes over the admissibility of scientific and technical evidence refer to the manual to help them better understand and evaluate the relevance, reliability and usefulness of the evidence being proffered. The manual is not intended to tell judges what is good science and what is not. Instead, it serves to help judges identify issues on which experts are likely to differ and to guide the inquiry of the court in seeking an informed resolution of the conflict. The core of the manual consists of a series of chapters (reference guides) on various scientific topics, each authored by an expert in that field. The topics have been chosen by an oversight committee because of their complexity and frequency in litigation. Each chapter is intended to provide a general overview of the topic in lay terms, identifying issues that will be useful to judges and others in the legal profession. They are written for a non-technical audience and are not intended as exhaustive presentations of the topic. Rather, the chapters seek to provide judges with the basic information in an area of science, to allow them to have an informed conversation with the experts and attorneys.

Let me begin by saying that our Christian experience must be translated from the four walls of the church and into our day to day lifestyle. It is in the heartbeat of our calling that we should translate the love of God as we pick it up from church and take it to our workplaces. My mandate through this book is to strategically position you into a place of influence in your nation of calling within the marketplace. For a long time the marketplace has remained the reserve of the children of this world. 'The children of this world are in their generation wiser than the children of light' (Luke 16:8). By failing to take our position of dominion in the marketplace, we have put our God to shame. The name of God has been profaned by many people in this world. Have you realized that anytime you mention that you are born again in your workplace, you encounter ridicule, rejection and even persecution? People have continued to shamelessly talk foul things concerning Christianity and this has to stop. God is saying that He is ready to sanctify His great name that has been profaned. God wants to do this through you. God desires that you prosper in all that you do within the marketplace, and this you must remember is for His purposes. He is not doing it for you to be proud. God is doing it "that they may see and know, and understand together, that the hand of the LORD has done this, and the Holy One of Israel has created it" (Isaiah 41:20). God wants to introduce and establish His Kingdom in the marketplace through you.

He will show Himself strong on your behalf for His purposes to be fulfilled in the earth. To many Christians, there has been and there remains to be a great misconception on the perception towards serving God. We see service in the full time ministry position as the only way to serve God. In everything we do, it is important to understand that it is because of the purposes of God that we were created. God is a wise investor and the gifting He invested in you is for the expansion of His Kingdom. God wants to show Himself strong through you. The Kingdom of God is within you and as such, you are supposed to carry it into your marketplaces. It has to manifest through you at your place of work, business and even in your relationships. You should remember that He chose you. You did not choose Him. To quite a number of Christians, business is secular work, whereas serving God in church is the only way to ascribe to ministry. This tendency is so prevalent in the church that many well meaning Christians do their business or work in offices without connecting it to ministry. That is why many Christians have this 'holier than thou' attitude when in church doing the things of God but when they get to their work stations they exhibit lucre luster performances, oblivious of the fact that we are commanded to work as unto God. Many Christians may be concerned with church work and even support it financially, but fail to see the connection between service at their work place and their Christian life. Some even think that if you really are serious about ministry, you ought to quit your job or give up your business in order to pursue a role in full time ministry. The object matter of this book is to bring every believer to the realization that we all were created for a purpose and that the faster we realize this and take up our positions the better. As Christians we are cut out and mandated to fulfill a specific assignment for God here on earth. Our mission is to honour God in our service by extending His will to all our activities.

First published in 1979, Airport Engineering by Ashford and Wright, has become a classic textbook in the education of airport engineers and transportation planners. Over the past twenty years, construction of new airports in the US has waned as construction abroad boomed. This new edition of Airport Engineering will respond to this shift in the growth of airports globally, with a focus on the role of the International Civil Aviation Organization (ICAO), while still providing the best practices and tested fundamentals that have made the book successful for over 30 years.

Handbook of Checked Baggage Screening – Advanced Airport Security Operation is a practical guide for project managers and designers embarking on hold-baggage screening developments within the airport environment for the first time. The book clearly explains away any uncertainty about the processes and procedures to be used by the various parties involved within the industry and sets out 'best practice' with respect to checked baggage screening design. Valuable lessons can be learned from actual case studies contributed by leading equipment manufacturers on recent 100% hold baggage screening projects. In addition to the all-important security screening of baggage and passengers the book also looks at the following areas associated with airport security, through the use of a detailed structured security check-list evaluation questionnaire. The questionnaire allows airports to assess the state of readiness of their airports and then, using the other chapters, gain an insight regarding which technology will best solve any security gaps. The authors offer a unique perspective through their background and experience. Many of the checked baggage screening procedures and equipment discussed in the book have already been implemented in the UK, with the authors responsible for leading this effort. The combined experience they can offer to the industry world wide is invaluable.
