The essays collected in this volume take a new look at the role of language in the thought of Martin Heidegger to reassess its significance for contemporary philosophy. They consider such topics as Heidegger's engagement with the Greeks, expression in language, poetry, the language of art and politics, and the question of truth. Heidegger left his unique stamp on language, giving it its own force and shape, especially with reference to concepts such as Dasein, understanding, and attunement, which have a distinctive place in his philosophy.

Commission Narratives is based on the author's doctoral dissertation in Groningen (2002). The monograph offers the first overarching, comparative treatment of commission narratives in the canonical and apocryphal Acts of the Apostles, analysing them in their ancient literary setting. Following a survey of this widespread narrative theme in the cultural environment of early Christianity, Czachesz establishes a threefold social typology of divine commission (institutional, prophetic and philosophical) and explores the occurrences of the three types in the canonical and apocryphal Acts. The central chapters of the book provide a close reading of the textual evidence, investigating intertextual relations, the function of commission in the narrative structure, and the biographical models of self-definition that commission stories offered to the ancient readers in their changing social and ecclesiastical environments. Based on this textual analysis, Czachesz makes new proposals about the reconstruction, Sitz im Leben and dating of several apocryphal Acts. Finally, he examines the synchronic structure of commission, showing that the variety of commission narratives emerges from a constant set of motifs that are generated by interactions among the characters. Principles of Physics is a well-established popular textbook which has been completely revised and updated.

The CEFR Companion volume represents another step in a process of engagement with language education that has been pursued by the Council of Europe since 1971 and which seeks to: ? promote and support the learning and teaching of modern languages; ? enhance intercultural dialogue, and thus mutual understanding, social cohesion and democracy; ? protect linguistic and cultural diversity in Europe; and ? promote the right to quality education for all.

At the heart of this book is the controversy over whether Inca history can and should be read as history. Did the Incas narrate a true reflection of their past, and did the Spaniards capture these narratives in a way that can be meaningfully reconstructed? In *Reading Inca History*, Catherine Julien finds that the Incas did indeed create detectable life histories. The two historical genres that contributed most to sixteenth- and seventeenth-century Spanish narratives about the Incas were an official account of Inca dynastic genealogy and a series of life histories of Inca rulers. Rather than take for granted that there was an Inca historical consciousness, Julien begins by establishing an Inca purpose for keeping this dynastic genealogy. She then compares Spanish narratives of the Inca past to identify the structure of underlying Inca genres and establish the dependency on oral sources. Once the genealogical genre can be identified, the life histories can also be detected. By carefully studying the composition of Spanish narratives and their underlying sources, Julien provides an informed and convincing reading of these complex texts. By disentangling the sources of their meaning, she reaches across time, language, and cultural barriers to achieve a rewarding understanding of the dynamics of Inca and colonial political history.

For fans of Sarah Dessen and Mary H.K. Choi, this lyrical and emotionally driven novel follows Alina, a young aspiring dancer who suffers a devastating injury and must face a world without ballet—as well as the darker side of her former dream. Alina Keeler was destined to dance, but then a terrifying fall shatters her leg—and her dreams of a professional ballet career along with it. After a summer healing (translation: eating vast amounts of Cool Ranch Doritos and binging ballet videos on YouTube), she is forced to trade her pre-professional dance classes for normal high school, where she reluctantly joins the school musical. However, rehearsals offer more than she expected—namely Jude, her annoyingly attractive castmate she just might be falling for. But to move forward, Alina must make peace with her past and face the racism she experienced in the dance industry. She wonders what it means to yearn for ballet—something so beautiful, yet so broken. And as broken as she feels, can she ever open her heart to someone else? Touching, romantic, and peppered with humor, this debut novel explores the tenuousness of perfectionism, the possibilities of change, and the importance of raising your voice.

This book provides an introduction to the interplay between linear algebra and dynamical systems in continuous time and in discrete time. It first reviews the autonomous case for one matrix  $A$  via induced dynamical systems in  $\mathbb{R}^d$  and on Grassmannian manifolds. Then the main nonautonomous approaches are presented for which the time dependency of  $A(t)$  is given via skew-product flows using periodicity, or topological (chain recurrence) or ergodic properties (invariant measures). The authors develop generalizations of (real parts of) eigenvalues and eigenspaces as a starting point for a linear algebra for classes of time-varying linear systems, namely periodic, random, and perturbed (or controlled) systems. The book presents for the first time in one volume a unified approach via Lyapunov exponents to detailed proofs of Floquet theory, of the properties of the Morse spectrum, and of the multiplicative ergodic theorem for products of random matrices. The main tools, chain recurrence and Morse decompositions, as well as classical ergodic theory are introduced in a way that makes the entire material accessible for beginning graduate students.

Since 1989, with the publication of Curriculum and Evaluation Standards for Mathematics by the National Council of

Teachers of Mathematics, standards have been at the forefront of the education reform movement in the United States. The mathematics standards, which were revised in 2000, have been joined by standards in many subjects, including the National Research Council's National Science Education Standards published in 1996 and the Standards for Technical Literacy issued by the International Technology Education Association in 2000. There is no doubt that standards have begun to influence the education system. The question remains, however, what the nature of that influence is and, most importantly, whether standards truly improve student learning. To answer those questions, one must begin to examine the ways in which components of the system have been influenced by the standards. Investigating the Influence of Standards provides a framework to guide the design, conduct, and interpretation of research regarding the influences of nationally promulgated standards in mathematics, science, and technology education on student learning. Researchers and consumers of research such as teachers, teacher educators, and administrators will find the framework useful as they work toward developing an understanding of the influence of standards.
