This volume consists of six articles, each treating an important topic in the theory of the Navier-Stokes equations, at the research level. Some of the articles are mainly expository, putting together, in a unified setting, the results of recent research papers and conference lectures. Several other articles are devoted mainly to new results, but present them within a wider context and with a fuller exposition than is usual for journals. The plan to publish these articles as a book began with the lecture notes for the short courses of G.P. Galdi and R. Rannacher, given at the beginning of the International Workshop on Theoretical and Numerical Fluid Dynamics, held in Vancouver, Canada, July 27 to August 2, 1996. A renewed energy for this project came with the founding of the *Journal of Mathematical Fluid Mechanics*, by G.P. Galdi, J. Heywood, and R. Rannacher, in 1998. At that

time it was decided that this volume should be published in association with the journal, and expanded to include articles by J. Heywood and W. Nagata, J. Heywood and M. Padula, and P. Gervasio, A. Quarteroni and F. Saleri. The original lecture notes were also revised and updated.

One of the great architects of our time, Frank Gehry has revolutionized the use of materials in design and redefined how architects use computers as a design tool to advance form-making as we know it. He has achieved worldwide fame for such large-scale public projects as the Guggenheim Museum in Bilbao, Spain, and the Walt Disney Concert Hall in Los Angeles, California, but it was in private houses that Gehry first explored and interrogated the principles of modern architecture. In these houses—most notably his own, in Santa Monica, California—Gehry distorted, expanded, and collapsed the modernist box, exploring everyday materials (corrugated metal, unfinished plywood, and chain link), experimenting with color, and challenging accepted notions about geometry and structure. In houses such as the Schnabel House in Brentwood, California, and the Winton Guest House in Wayzata, Minnesota, he experimented with collage and assemblage. More recently, Gehry's work has taken on sculptural forms, aided by new structural and geometric potentials of digital design, as in the near-legendary Lewis

House in Lyndhurst, Ohio. Color photographs, sketches, and plans create an illuminating visual record of some of the most groundbreaking, seminal projects of Gehry's oeuvre.
