**Factories of the Future** Tullio Tollo, Giacomo Copani, Walter Terkaj, 2019-02-14 This book is open access under a CC BY 4.0 license. This book presents results relevant in the manufacturing research field, that are mainly aimed at closing the gap between the academic investigation and the industrial application, in collaboration with manufacturing companies. Several hardware and software prototypes represent the key outcome of the scientific contributions that can be grouped into five main areas, representing different perspectives of the factory domain: 1) Evolutionary and reconfigurable factories to cope with dynamic production contexts characterized by evolving demand and technologies, products and processes. 2) Factories for sustainable production, asking for energy efficiency, low environmental impact products and processes, new de-production logics, sustainable logistics. 3) Factories for the People who need new kinds of interactions between production processes, machines, and human beings to offer a more comfortable and stimulating working environment. 4) Factories for customized products that will be more and more tailored to the final user's needs and sold at cost-effective prices. 5) High performance factories to yield the due production while minimizing the inefficiencies caused by failures, management problems, maintenance. This book is primarily targeted to academic researchers and industrial practitioners in the manufacturing domain.

**Design of Flexible Production Systems** Tullio Tollo, 2008-12-11 In the last decade, the production of mechanical components to be assembled in final products produced in high volumes (e.g. cars, mopeds, industrial vehicles, etc.) has undergone deep changes due to the overall modifications in the way companies compete. Companies must consider competitive factors such as short lead times, tight product tolerances, frequent market changes and cost reduction. Anyway, companies often have to define production objectives as trade-offs among these critical factors since it can be difficult to improve all of them. Even if system flexibility is often considered a fundamental requirement for firms, it is not always a desirable characteristic of a system because it requires relevant investment cost which can jeopardize the profitability of the firm. Dedicated systems are not able to adapt to changes of the product characteristics while flexible systems offer more flexibility than what is needed, thus increasing investment and operative costs. Production contexts characterized by mid to high demand volume of well identified families of products in continuous evolution do not require the highest level of

flexibility; therefore, manufacturing system flexibility must be rationalized and it is necessary to find out the best trade-off between productivity and flexibility by designing manufacturing systems endowed with the right level of flexibility required by the production problem. This new class of production systems can be named Focused Flexibility Manufacturing Systems-FFMSs. The flexibility degree in FFMSs is related to their ability to cope with volume, mix and technological changes, and it must take into account both present and future changes. The required level of system flexibility impacts on the architecture of the system and the explicit design of flexibility often leads to hybrid systems, i.e. automated integrated systems in which parts can be processed by both general purpose and dedicated machines. This is a key issue of FFMSs and results from the matching of flexibility and productivity that respectively characterize FMSs and Dedicated Manufacturing Systems (DMSs). The market share of the EU in the machine tool sector is 44%; the introduction of focused flexibility would be particularly important for machine tool builders whose competitive advantage is based on the ability of customizing their systems on the basis of needs of their customers. In fact, even if current production contexts frequently present situations which would fit well with the FFMS approach, tradition and know-how of machine tool builders play a crucial role. Firms often agree with the focused flexibility vision, nevertheless they decide not to pay the risk and efforts related to the design of this new system architecture. This is due also to the lack of well-structured design approaches which can help machine tool builders to configure innovative systems. Therefore, the FFMS topic is studied through the book chapters following a shared mission: To define methodologies and tools to design production systems with a minimum level of flexibility needed to face, during their lifecycle, the product and process evolution both in the technological and demand aspects. The goal is to find out the optimal trade-off between flexibility and productivity. The book framework follows the architecture which has been developed to address the FFMS Design problem. This architecture is both broad and detailed, since it pays attention to all the relevant levels in a firm hierarchy which are involved in the system design. Moreover, the architecture is innovative because it models both the point of view of the machine tool builder and the point of view of the system user. The architecture starts analyzing Manufacturing Strategy issues and generating the possible demand scenario to be faced. Technological aspects play a key role while solving process plan problems for the products in the part family. Strategic and technological data becomes input when a machine tool builder performs system configuration. The resulting system configurations are possible solutions that a system user considers when planning its system capacity. All the steps of the architecture are deeply studied, developing methods and tools to address each subproblem. Particular attention is paid to the methodologies adopted to face the different subproblems: mathematical programming, stochastic programming, simulation techniques and inverse kinematics have been used. The whole architecture provides a general approach to implement the right degree of flexibility and it allows to study how different aspects and decisions taken in a firm impact on each other. The work presented in the book is innovative because it gives links among different research fields, such as Manufacturing Strategy, Process Plan, System Design,

Capacity Planning and Performance Evaluation; moreover, it helps to formalize and rationalize a critical area such as manufacturing system flexibility. The addressed problem is relevant at an academic level but, also, at an industrial level. A great deal of industrial sectors need to address the problem of designing systems with the right degree of flexibility; for instance, automotive, white goods, electrical and electronic goods industries, etc. Attention to industrial issues is confirmed by empirical studies and real case analyses which are presented within the book chapters.

The ManuFuture Road Francesco Jovane, Engelbert Westkämper, David Williams, 2008-10-23 Manufacturing in Europe is under great pressure from structural changes in the global economy. The high technical, social and cultural standards in Europe mean that our manufacturing enterprises lead the world but inevitably production and consumption continues to migrate to regions that allow higher profitability from lower costs of production with the promise of new markets. Structural changes in European industries will influence employment and welfare. However, there are signs of a new High-Adding-Value industrial revolution. This book has the answers that will allow us to avoid the negative consequences of this migration. A new model of future manufacturing - ManuFuture - has been forged in discussion with the world's leading scientists in manufacturing and many experts from research, industry and economic policy. The results of this, the road to competitive and sustainable manufacturing, are captured in this fundamental book. The generic Model of ManuFuture, a Vision 2020 and a Strategic Research Agenda and the proactive initiatives required are presented here. They show the approach to manufacturing in the age of knowledge and the actions that must be taken.

Being Scholarly Liezel Frick, Vernon Trafford, Magda Fourie-Malherbe, 2016-01-05 In this discussion of higher education studies in South Africa we attempt to illustrate how higher education studies in South Africa reflect both global and local trends and concerns, and how the publications by Eli Bitzer over the course of his involvement and dedication to the field for thirty years have contributed to our understanding of this field.

**Subsidy Or Self-respect?** Kamal Kar, 2003 Access to latrines in rural areas of Bangladesh is less than 15 per cent. Many international agencies and non-governmental organisations have been working to improve environmental sanitation by constructing latrines and toilets with subsidies provided at different rates. But even after three decades of such efforts it is difficult to find 100 villages from amongst nearly 85, 000 that are totally sanitised and free from open defecation. Success has generally been measured on the basis of the number of latrines constructed within a given period of time instead of the extend of open defecation, which in most cases has been continued unabated. A new approach being pioneered by the author (Dr Kamal Kar, Social and Participatory Development Consultant from Calcutta, India) with Village Education Resource Centre (VERC), Water Aid in Bangladesh and other agencies concentrates on empowering local people to analyse the extent and risk of environmental pollution caused by open defecation, and to construct toilets without any external subsidies. This community-led effort has had a huge impact. Open defecation has been completely stopped by the community in more than

400 villages in Bangladesh, and the methodology is now being adopted in parts of India and elsewhere in Asia and Africa.

**The Sourcebook for Teaching Science, Grades 6-12** Norman Herr, 2008-08-11 The Sourcebook for Teaching Science is a unique, comprehensive resource designed to give middle and high school science teachers a wealth of information that will enhance any science curriculum. **Kenya Food Composition Tables, 2018** Food and Agriculture Organization of the United Nations, Government of Kenya, 2019-01-28 Food composition data provides food and nutrition sector, both private and public with the important guidelines in food labelling, assessment of nutrient intake to determine nutrition adequacy, diet formulation as well as in research and breeding. The information generated is also used to establish food-based dietary guidelines for dietary diversification and food fortification. They also help program managers in determining the relationships between disease outcome and nutrient intakes. The resultant information provides the evidence base for nutrition and health & agricultural policies in establishing how to meet the nutrient requirements in the population through diet. The Kenya Food Composition Tables [FCT] (2018) was developed following international guidelines from INFOODS considering all the required quality checks. It has three main sections: the first part of the book contains an introduction and user notes; the second section presents the actual food composition tables; the third section features photographs and descriptions of foods, to facilitate food identification. This publication will guide both county and national authorities in setting priorities in the implementation of food-based approaches to reduce the burden of malnutrition in the population and support nutrition-sensitive agricultural production.

Threshold Concepts in Practice Ray Land, Jan H. F. Meyer, Michael T. Flanagan, 2016-07-09 Threshold Concepts in Practice brings together fifty researchers from sixteen countries and a wide variety of disciplines to analyse their teaching practice, and the learning experiences of their students, through the lens of the Threshold Concepts Framework. In any discipline, there are certain concepts – the ‘jewels in the curriculum’ – whose acquisition is akin to passing through a portal. Learners enter new conceptual (and often affective) territory. Previously inaccessible ways of thinking or practising come into view, without which they cannot progress, and which offer a transformed internal view of subject landscape, or even world view. These conceptual gateways are integrative, exposing the previously hidden interrelatedness of ideas, and are irreversible. However they frequently present troublesome knowledge and are often points at which students become stuck. Difficulty in understanding may leave the learner in a ‘liminal’ state of transition, a ‘betwixt and between’ space of knowing and not knowing, where understanding can approximate to a form of mimicry. Learners navigating such spaces report a sense of uncertainty, ambiguity, paradox, anxiety, even chaos. The liminal space may equally be one of awe and wonderment.

Thresholds research identifies these spaces as key transformational points, crucial to the learner's development but where they can oscillate and remain for considerable periods. These spaces require not only conceptual but ontological and discursive shifts. This volume, the fourth in a tetralogy on Threshold Concepts, discusses student experiences, and the curriculum interventions of their teachers, in a range of disciplines and professional practices including medicine, law, engineering, architecture and military education. **Researching Learning in Higher Education** Glynis Cousin, 2009-01-13 Across the world, universities are transforming their teaching and learning practices to meet the challenges facing Higher Education in the 21st century. Research into teaching and learning in Higher Education has never been a more important issue. Growing numbers of academics across disciplines are conducting research in their teaching. This book presents contemporary approaches to researching university teaching and learning to address this rising demand. The author provides a much needed comprehensive yet basic approach for conducting this type of research. A perfect resource for new lecturers, professional developers, researchers and graduate students; this book provides useful and effective guidance for conducting teaching and learning research in Higher Education. Filling a clear gap in the market, this book covers all the essential methodological and theoretical bases needed to engage in Higher Education research. This book offers a refreshingly light yet serious approach to research which has proved to yield significant advances in the field, allowing new academics from any discipline to effectively conduct higher education research. Each chapter covers the following: FRAMING HIGHER EDUCATION RESEARCH Generating an ETHICAL FRAMEWORK QUALITATIVE DATA ANALYSIS FOCUS GROUP RESEARCH SEMI-STRUCTURED INTERVIEWS NARRATIVE INQUIRY ETHNOGRAPHIC APPROACHES CASE STUDY RESEARCH ACTION RESEARCH APPRECIATIVE INQUIRY PHENOMENOGRAPHY RESEARCHING THRESHOLD CONCEPTS VISUAL RESEARCH EVALUATION APPROACHES This book is an invaluable resource for anyone interested in up to date theories and methods for conducting teaching and learning research in Higher Education.

**Threshold Concepts Within the Disciplines** Ray Land, Jan Meyer, Jan Smith, 2008 Threshold Concepts within the Disciplines brings together leading writers from various disciplines and national contexts in an important and readable volume for all those concerned with teaching and learning in higher education. The foundational principle of threshold concepts is that there are, in each discipline, 'conceptual gateways' or 'portals' that must be negotiated to arrive at important new understandings. In crossing the portal, transformation occurs, both in knowledge and subjectivity. Such transformation involves troublesome knowledge, a key concern for contributors to this book, who identify threshold concepts in their own fields and suggest how to deal with them. Part One extends and enhances the threshold concept framework, containing chapters that articulate its qualities, its links to other social theories of learning and other traditions in educational research.

Part Two encompasses the disciplinary heart of the book with contributions from a diversity of areas including computing, engineering, biology, design, modern languages, education and economics. In the many empirical case studies educators show how they have used the threshold concept framework to inform and evaluate their teaching contexts. Other chapters emphasise the equally important 'being and becoming' dimension of learning. Part Three suggests pedagogic directions for those at the centre of the education project with contributions focusing on the socialisation of academics and their continuing quest to be effective teachers. The book will be of interest to disciplinary teachers, educational researchers and educational developers. It also is of relevance to issues in quality assurance and professional accreditation.

*Aristotle: The Politics and the Constitution of Athens* Aristotle,1996-10-03 An extended and revised edition of one of the best-selling Cambridge Texts.

**A Philosophical Commentary on the Politics of Aristotle** Peter L. Phillips Simpson,2000-11-09 The Politics, Aristotle's classic work on the nature of political community, has been a touchstone of Western debates about society and government. In this volume, Peter Simpson presents a complete philosophical commentary on the Politics, an analysis of the logical structure of the entire text and each of its constitutive arguments and conclusions. Unlike other contemporary works on the Politics, Simpson's philosophical commentary is not, save incidentally, a discussion of philological and historical questions, a speculative elaboration of Aristotle's arguments, or a comparison of the philosopher's ideas with those of other ancient and modern theorists. Such treatments, argues Simpson, must be grounded in a thorough understanding of the philosophical content of the work--a point that underscores the need for this thorough and accurate analysis. Keyed to the ancient Greek text as well as to Simpson's own innovative translation of it (UNC Press, 1997), this book will stand as a valuable commentary on the philosophical argument in the Politics and will serve as a sound basis for future study of Aristotle's political thought.

**Aristotle In Outline** Timothy A. Robinson,1995-03-15 Clearly written and provides students, bewildered by a first confrontation with Aristotle, with a key that will open the door to many of the chief ideas of the philosopher. I would also recommend it as a refreshing read to the more advanced philosopher. . . . just what the professor ordered (or can order) as the supplement to reading the original text in a course, especially an undergraduate one. --Joseph A. Novak, University of Waterloo

Micro-Electro Discharge Machining Irene Fassi,Francesco Modica,2021-10-25 Micro electrical discharge machining (micro-EDM) is a thermo-electric and contactless process most suited for micro-manufacturing and high-precision machining, especially when difficult-to-cut materials, such as super alloys, composites, and electro conductive ceramics, are processed. Many industrial domains exploit this technology to fabricate highly demanding components, such as high-aspect-ratio micro

holes for fuel injectors, high-precision molds, and biomedical parts. Moreover, the continuous trend towards miniaturization and high precision functional components boosted the development of control strategies and optimization methodologies specifically suited to address the challenges in micro- and nano-scale fabrication. This Special Issue showcases 12 research papers and a review article focusing on novel methodological developments on several aspects of micro electrical discharge machining: machinability studies of hard materials (TiNi shape memory alloys, Si<sub>3</sub>N<sub>4</sub>-TiN ceramic composite, ZrB<sub>2</sub>-based ceramics reinforced with SiC fibers and whiskers, tungsten-cemented carbide, Ti-6Al-4V alloy, duplex stainless steel, and cubic boron nitride), process optimization adopting different dielectrics or electrodes, characterization of mechanical performance of processed surface, process analysis, and optimization via discharge pulse-type discrimination, hybrid processes, fabrication of molds for inflatable soft microactuators, and implementation of low-cost desktop micro-EDM system.

**Capacity-building** Deborah Eade, 1997 This book considers specific and practical ways in which NGO's can contribute to enabling people to build on the capacities they already possess. It reviews the types of social organisation with which NGO's might consider working and the provision of training in a variety of relevant skills and activities.

Student Motivation, Cognition, and Learning Paul R. Pintrich, Donald R. Brown, Claire Ellen Weinstein, 2012-12-06 Designed to present some of the current research on student motivation, cognition, and learning, this book serves as a festschrift for Wilbert J. McKeachie who has been a leading figure in college teaching and learning. The contributions to this volume were written by former students, colleagues and friends. A common focus on a general or social cognitive view of learning is shared throughout the volume, but there are significant differences in the perspectives the researchers bring to bear on the issues. They provide an excellent cross-section of current thinking and research on general cognitive topics such as students' knowledge structures, cognitive and self-regulated learning strategies, as well as reasoning, problem solving, and critical thinking. Social cognitive and motivational topics are also well represented, including self-worth theory and expectancy-value models. More importantly, an explicit attempt is made to link cognitive and motivational constructs theoretically and empirically. This area of research is one of the most important and promising areas of future research in educational psychology. Finally, most of the chapters address instructional implications, but several explicitly discuss instructional issues related to the improvement of college students' motivation and cognition.

Anatomy for Diagnostic Imaging E-Book Stephanie Ryan, Michelle McNicholas, Stephen J. Eustace, 2011-12-02 This book covers the normal anatomy of the human body as seen in the entire gamut of medical imaging. It does so by an initial traditional anatomical description of each organ or system followed by the radiological anatomy of that part of the body using all the relevant imaging modalities. The third edition addresses the anatomy of new imaging techniques including three-dimensional CT, cardiac CT, and CT and MR angiography as well as the anatomy of therapeutic interventional radiological

techniques guided by fluoroscopy, ultrasound, CT and MR. The text has been completely revised and over 140 new images, including some in colour, have been added. A series of 'imaging pearls' have been included with most sections to emphasise clinically and radiologically important points. The book is primarily aimed at those training in radiology and preparing for the FRCR examinations, but will be of use to all radiologists and radiographers both in training and in practice, and to medical students, physicians and surgeons and all who use imaging as a vital part of patient care.
