Sikh history has traditionally been regarded as a paradox. Beginning in the early sixteenth century as a system of internal devotion. Sikhism emerges into prominence during the eighteenth century as a clearly defined belief laying powerful stress upon external symbols. In a series of five essays this book examines Sikh history, scriptures, and society, seeking to show that the evolution of the community during the last 500 years has been a direct response to circumstances in the Punjab.

This volume collects papers presented at the International 100% Renewable Energy Conferences (IRENEC) from 2011 to 2015. This is the Eighth Edition of the comprehensive and well-respected text and reference of pathophysiology. As a nurse-physiologist, Carol Porth uniquely emphasizes "concepts" of altered health states, as opposed to factual descriptions of diseases and disorders. This conceptual model integrates the developmental and preventative aspects of health. By taking this physiologic approach, the author ensures a comprehension of the whole of body function. By integrating all of the aspects of the human body into a total functional whole, the student can grasp both the physical and psychological aspects of altered health. This edition has a completely revamped art program and new displays that showcase pathophysiological processes through detailed visual representation. Other highlights include a greater international focus, expanded content on evidence-based practice and completely revised, updated chapters on genetics, disorders of white blood cells and lymphoid tissues, and innate and acquired immunity. A bound-in CD-ROM and companion Website include Weblinks, an NCLEX® tutorial, a Spanish-English audio glossary, monographs of 100 most commonly prescribed drugs, over 30 Concepts in Action animations, 5 Clinical Simulations, and dosage calculation quizzes. An Instructor's Resource DVD-ROM and online instructor resources are also available. The authors address claims that vertical ownership ties reduce programming diversity, restrict entry of competitors to cable, or have other socially undesirable effects

How are widely popular social media such as Facebook, Twitter, and Instagram transforming how teachers teach, how kids learn, and the very foundations of education? What controversies surround the integration of social media in students' lives? The past decade has brought increased access to new media, and with this new opportunities and challenges for education. In this book, leading scholars from education, law, communications, sociology, and cultural studies explore the digital transformation now taking place in a variety of educational contexts. The contributors examine such topics as social media usage in schools, online youth communities, and distance learning in developing countries; the disruption of existing educational models of how knowledge is created and shared; privacy; accreditation; and the tension between the new ease of sharing and copyright laws. Case studies examine teaching media in K-12 schools and at universities; tuition-free, open education powered by social media, as practiced by the University of the People; new financial models for higher education; the benefits and challenges of MOOCs (Massive Open Online Courses); social media and teacher education; and the civic and individual advantages of teens' participatory play. Contributors: Colin Agur, Jack M. Balkin, Valerie Belair-Gagnon, danah boyd, Nicholas Bramble, David Buckingham, Chris Dede, Benjamin Gleason, Christine Greenhow, Daniel J. H. It is an edited book with chapters written by multi-disciplinary specialists in their specific subject areas. It covers development of IPM components and packaging them for individual vegetable crops specifically targeted to tropical countries. Scientific background for IPM components or tactics will be included. There will be case studies of IPM packages developed and implemented in different countries. The concept of IPM has been in existence for the past six decades; however, a practical holistic program has not been developed and implemented for vegetable crops, in the developing countries. Currently the IPM adoption rate in the tropics is minimal and there is a need for implementation of IPM technologies that are environmentally safe, economical, and socially acceptable. We believe that adoption and implementation of IPM provided in this book will lead to significant reduction in crop losses and mitigate adverse impacts of pesticide use in the tropics. This book is an outcome 20 years of research, development and implementation of the IPM CRSP, a project supported by USAID and administered by Virginia Tech in several developing countries along the tropical belt in Africa, Asia, Latin America and the Caribbean. ?

The history of the compilation of the Adi Granth - the Sikh "cannon" - has long been the subject of speculation and debate. In Mann's comprehensive account, he presents findings that challenge traditional and contemporary hypotheses and raises some entirely fresh questions.

State education departments and school districts face an important challenge in implementing a new law that requires

disadvantaged students to be held to the same standards as other students. The new requirements come from provisions of the 1994 reauthorization of Title I, the largest federal effort in precollegiate education, which provides aid to "level the field" for disadvantaged students. *Testing, Teaching, and Learning* is written to help states and school districts comply with the new law, offering guidance for designing and implementing assessment and accountability systems. This book examines standards-based education reform and reviews the research on student assessment, focusing on the needs of disadvantaged students covered by Title I. With examples of states and districts that have track records in new systems, the committee develops a practical "decision framework" for education officials. The book explores how best to design assessment and accountability systems that support high levels of student learning and to work toward continuous improvement. *Testing, Teaching, and Learning* will be an important tool for all involved in educating disadvantaged students—state and local administrators and classroom teachers.

Growing local economies, empowering communities, revitalizing downtowns, developing entrepreneurship, building leadership, and enhancing nonprofits — you can achieve all these benefits and more with a comprehensive and strategic revitalization plan. Chronicling the struggle of local revitalization as organizers move from trial and error to effective revitalization strategies, Promoting Sustainable Local and Community Economic Development documents the current transformation in community revitalization from market-based incentives to mixed strategies of public sector learning, partnerships, and community capacity. Knowledge about the field and what works is growing, but not always publicized and readily accessible. This reference surveys the breadth of innovative place and people development practices, presenting lessons and examples at a general and textured level, putting information about innovative ways to change, influence, and improve the economic development process within easy reach. Roland Anglin brings his unique vantage point to the topic; his experience as a practitioner and applied academic allowed him to see how community economic development practices grow over time in size, scale, and impact. He highlights the difference between what is now termed community economic development (CED) and traditional local economic development practice, specifically the priority placed on community involvement in economic development partnerships between the private sector and government. The book includes case studies that demonstrate what has and has not worked in revitalization efforts, as well as how active public and private sector partnerships have been the most effective in revitalization efforts. A Resource Guide is included at the end of the book for readers who may want a more expansive understanding of community economic development.

Coral disease is quickly becoming a crisis to the health and management of the world's coral reefs. There is a great interest from many in preserving coral reefs. Unfortunately, the field of epizootiology is disorganized and lacks a standard vocabulary, methods, and diagnostic techniques, and tropical marine scientists are poorly trained in wildlife pathology, veterinary medicine, and epidemiology. Diseases of Coral will help to rectify this situation.

The continued loss of rail network infrastructure and rail service throughout the US has most instances resulted in the modal shift of rail freight back to truck. Rail freight converted to truck may have significant impact on pavement maintenance costs and activities due to the increased highway traffic volumes. This study will investigate three short-line rail routes in Minnesota, Wisconsin and the Upper Peninsula of Michigan and will determine the potential impacts of diverting rail freight flows to truck. A logistics flow routing will be created illustrating the new truck flows by highway classification and usage. The targeted highways current conditions and asset management techniques will be documented. A pavement maintenance model will be used to determine the incremental pavement maintenance cost per ton-mile if additional freight moved over various classes of highway and their impact on highway funding.

The understanding of global environmental management problems is best achieved through transdisciplinary research lenses that combine scientific and other sector (industry, government, etc.) tools and perspectives. However, developing effective research teams that cross such boundaries is difficult. This book demonstrates the importance of transdisciplinarity, describes challenges to such teamwork, and provides solutions for overcoming these challenges. It includes case studies of transdisciplinary teamwork, showing how these solutions have helped groups to develop better understandings of environmental problems and potential responses.

"The purpose of the kit is to provide you with the necessary information and resources to plan the community engagement component of a project - from design and delivery through to evaluation and incorporation of learning." --Book 1, p. 8.

This book is a collection of papers presented at the 2nd International River Quality Symposium. The papers give case studies of the quality of rivers in different parts of the world, focusing particularly on the polluted Vistula River in Poland and the revived Will amette River in Oregon, USA which was the subject of a major cleaning operation in the 1970s. The book provides valuable information on the quality of rivers in Eastern Europe, particularly Poland. It is timely since, with the collapse of communism, Eastern European countries are faced with tackling huge environmental problems created by the lack of investment in environmental technology. The situation in Poland is contrasted with the USA and UK where water pollution problems have largely been overcome.
